Maybe in America Rat Shack has no competition, but here in Australia there is Dick Smith Electronics and other electronic stores.

In Australia Rat Shack goes by another name Tandy and the stuff they sell is junk and over priced, but the sales staff know what they are talking about.

I went into a Tandy store and the salesman gave me a 15 minute demo of the new Realistic Pro Scanner.

He knew how to operate it, add new frequencies, perform a search and all the other bells and whistles.

Insurance Big Brother
By Eric Peters
Don't worry about Big Government keeping tabs on you--worry about Big Business.

Imagine, for example, if insurance companies were able to closely monitor your driving habits. Imagine if they were able to keep track, literally, of your every movement. Well, imagine no more. It's all quite possible, courtesy of global positioning satellite (GPS) technology.

GPS technology isn't coercive or mandatory--yet. And it's only in the "testing" phase--so far. But as GPS transponders become commonplace on cars (today, only higher-end cars are so equipped), the temptation to exploit the technology for such a purpose may prove difficult to resist.

GPS systems have become popular additions to many vehicles, as navigational aids. But the same technology that helps you find an address also can help someone find you--or keep tabs on you--wherever you go.

Progressive Insurance Co. is the first insurer to take advantage of GPS technology for this purpose. Customers who sign up for an "actual use" policy agree to have a computer tracking device tied into a GPS transmitter/receiver installed in their vehicle. The equipment records such things as how often and where the car is driven, the duration of trips, and how fast you drive. It even records such minutia as how rapidly the vehicle decelerates and accelerates. The idea is seemingly benign: ID high-risk drivers and driving behavior and issue policy premiums accordingly.

Houston, Texas, is the first testing ground for this use of GPS technology. The monitoring equipment records the movements of the vehicle and its location every six minutes, and this info is automatically transmitted to the insurance company's computers. There, it's used to form a profile of individual driving habits that enables Progressive to tailor insurance premiums to "actual risk." Policyholders who agree to be monitored in this manner receive a monthly "statement" describing their behind-the-wheel activities--accompanied by a bill.

If we accept the reasoning of the insurance company, there is a plus side to this monitoring. It can be a boon to drivers who drive safely--but who have a less than perfect driving record--because it allows the insurance company to tailor premiums to legitimate risk factors rather than the arbitrary bludgeon of speeding tickets and "demerit" points. For instance, motorists who avoid driving at high-risk times of the day (and night), or in high traffic density areas, have a lower-risk profile than other drivers do. The onboard recording equipment allows the insurance company to identify lower-risk drivers and-theoretically--adjust their premiums downward

On the downside, this currently "voluntary" technology could easily become mandatory and lead to constant surveillance. The insurance companies, and perhaps the government, would know your every move--not just how you drive, but where you go and when.

Tickets for "speeding" and other infractions recorded by the computer could likewise be issued automatically; there would be no need for radar traps anymore. Also, the police could turn off your vehicle, simply by sending an electronic signal to the onboard computer--all via the GPS system. This is not a paranoid hallucination.

The building blocks are all in place. General Motors has been equipping some of its cars with onboard recording technology since the 1990s--ostensibly to help the automaker acquire a useful database that would assist the company in analyzing accidents and making vehicles safer. Data pertaining to speed, braking and use of seatbelts is stored in the "black box" for later retrieval. GM says the info acquired by these Sensing Diagnostic Modules (SDMs) is not released to any third party and is accessed only in the event of a major crash. But at least one lawsuit (in New Jersey) relating to the SDMs is pending; the suit accuses GM of violating the privacy of drivers and doing so without their consent.

Progressive, so far, is the only insurance company to employ GPS technology for direct, "real time" monitoring of individual drivers--and the technology is quite voluntary, for now.

But that could--and very likely will--change before long. Insurance companies and the government could make arguments for the use of monitoring equipment on the grounds of "public safety," as has happened with photo radar and other automated means of traffic enforcement. The practical end of privacy may be closer at hand than we realize.

What if GPS systems became mandatory and insurance companies used this for monitoring purposes? Join other hot discussions in The Automobile Forum.

Or tap into the BIG federal database that is
fed by:

- state county and metropolitan court, tax
and property records
- state courts, professional & driving
licenses and tax records
- federal courts
- other federal and state agencies
- all births and deaths (from states to the
Commerce Dept.)
- medical (MD & DD) records
- hospital records
- insurance policies

- bank account records
- credit card (revolving credit) records
- the big three credit approvers
- that primo government "partner" - AT&T
(Verizon, Bell)
- the other phone companies
- gun sales (FFLs)

All of these have agreements, or are required
by some
regulation or law, to give this information
to various
departments within the federal government
which then
"share" this information.

Do you know if it is standard NTSC format, i.e. AM modulation for the video etc.? If they use FM modulated video then using one of those new scanners with the color LCD display will not work. For 2.4GHz a cheap satellite down converter amplifier combo could be used to convert the microwave video to a lower frequency the scanner can handle.

It is also a symtom of our erosion of privacy (there is none) married
to technology. Gangs get addresses from the internet databases which
are full of info on everyone...in the US at least. Other nations
respect peoples privacy more, probably a painful lesson learned the
hard way.

And the US wants European nations to ease any privacy restrictions they
may have.

Dev (and others) - how does one do the discriminator mod. Yes, I did
some searching on the web, but no success yet...

Also, I know the technical differences between PCR100 / PCR1000. If I
don't need SSB and can add a discriminator, will it do everything
else? Is there aftermarket software that works with the 1000 but not
the 100? (TalkPCR seems to mention only the 1000, other than stating
that one of the bug fixes was a screen button related to the 100.) Can
I do trunking with it, using the two-scanner approach?

thanks!!

There has been a suggestion that the gasoline tax be replaced by a road usage tax. The more miles you drive the more tax you pay. GPS technology would be used to keep track of the miles driven, in the various states computers, and you would get a tax bill from each state based on the miles drove within its borders. I guess there is almost no end of "useful" things the government, and private concerns, will find for GPS technology if we don't watch out.

The other reponses provided you with the only scanner dealers that are close to Toronto, not including Radio Shack which doesn't sell the BC780XLT here.

In any case, Canadian delears are not really cheap. And customer service is so bad at Radioworld, I woudn't even bother with them. I bought my BC780XLT from Durham Radio (one of the two close to Toronto) because they had one in stock and I could get my hands on it quickly. But I paid $600 Cdn + shipping + tax. However, I could have had a better deal from an American dealer. (Also, don't forget to check the return policies before buying.)

I think this is a prime reason for the reputation of New York City
residents ignoring cries for help and never admitting to being a witness
to a crime. New York has had gun control laws longer than any other
part of the US, dating back to the Sullivan Laws of 1911. Helpless
people make poor citizens of a republic.

FOR SALE

1- Uniden BC895XLT Trunktracker/Scanner. Excellent Condition.

Frequency coverage is 29-54 MHz, 108-174 MHz, 216-512 MHz, and 806-956 MHz, less cellular.

Additional specifications include: 300 memory channels, 10 memory banks, 10 Priority channels, Turbo Scan, CTCSS display, RS232C computer port, VFO tuning control, signal strength meter, AutoStore, duplicate frequency alert, tape recording, programmable search mode, one-touch weather, weather siren alert feature, BNC antenna connector, data skip, and much more.

Special Motorola Type I, II, IIi trunking features include: Trunk Scan, Trunk Search, Trunk Lockout, and Trunk Delay.

Includes the original box, AC power supply, telescoping antenna, and owners manual.

$150 Shipped via US Priority Mail. Money Order or Cashier's Check for payment.

If interested, email: kb0zmt@home.com

(These retail new for around $235 + shipping)

1542. Radiosonde Reception

Newsgroup: rec.radio.scanner
Date: 2001-03-29 02:17:02 UTC
From: Dante'@inferno.net
Message-ID: <99u5uudpf1@news.uky.edu>
Source record: 67780
Cross-posted to: rec.radio.scanner,rec.radio.amateur.space

Has anyone in either of these groups every received or even tried to receive,
NOAA radiosondes?
I found a strange 1 to 2 GC (yes GC not GHz) receiver.
It has 100KC/500KC/4MC/10MC/30MC BW, AM/FM, 21.4MC and 160MC IF outs, and runs
from -12.74V/-3.75V (positive ground).
Bought 4 at a flea market for 5$ each. They all work and I receive the ATC
transponder buzz great. I have always wanted to find a radiosonde, and now
that they all use GPS instead of RDF to compute wind speed I really want one.
The Tx in the 1.7GHz range, at 300mW.
So the big question has anyone ever DXed one?
What type antenna would you suggest?
Would a GPS antenna work?
Would a QDH work?
a diskcone would be easy to build, and I suspect it will be my first antenna.
The logic being that the radiosonde will not suddenly appear over me, and will
aproach from the horizon.
I am thinking of running the 160 MHz IF out into a PCR1000 and have it scan
+/-10MHz from the center freq. I can get my pc to monitor and scream for me if
any thing is recieved.
Thanks for any input.

Are you sure they use GPS? I hadn't heard that, and when I last launched one (~ 1997) it certainly didn't. You don't need too special of a receiver to get them -- they transmit in the 1690MHz range... You also need to be certain they are launched near you!

Just to clarify any misconceptions, the radios in question were the fire ground radios and are not used in any way for dispatching. They do not have the ability to contact the dispatcher nor are we involved in any way with the fire ground operation except for voice contact with the incident commander using his apparatus radio.

Your post appears to implicate us in this fiasco. We had no control over the situation nor were our opinions solicited before these "new and improved" radios were bought.(But who are we? We're just end users. What do we know?)

No, I'm not. It was your argument that alcohol and nicotine are harmful, not mine. I was just pointing out how silly it was to use something you consider harmful to justify legalizing something else that is harmful.

> So your personal experience is far more
> perceptive than 3 Presidential commissions,

When it comes to my personal opinions (and the way I will continue to vote on the drug issue), yes, my personal experience absolutely outweighs anything else, including any studies done by pro-drug advocates.

> I think your flip to a moral stance caused
> it. It is hard to tell if you are taking a

> is it?

Neither, both, and more (I'm not that single-minded). In addition to the moral and legal issues, it is also a health issue when it comes to the individual, and a health and public safety issue when it comes to this society as a whole. And, when it comes to my opinion, you lose the dabate when it comes to all of those.

Uniden offers an auxilliary battery charger (CRX-120) for packs used in the BC245XLT, but I'm interested in a 'smart' charger which monitors the pack and clips the charge when the voltage spikes so the pack won't cook. For anyone interested, I came across a little unit which appears ideal for the job. See the 'Graupner Ultramat 5' at http://www.hobby-lobby.com/chargers.htm. I'd appreciate some feedback if anyone knows of a better charger

I think it's obvious to anyone who has used or monitored a digital
system. There is NO 'half way' with digital, it's either working, or
it's gone.

I'm amazed that NYFD would buy a digital system, as far as I know,
NO other FD is digital, and they should NOT be.

Okay, to end the argument, I'll accept your self-proclaimed ignorance of "the mark," even though I still find it very hard to believe. That phrase, in the context used, has become so commonplace today, it has become part of popular vernacular (having little to do with religion, other than it's origin). Take care, what ever your name is.

D.C. Police Probe Blue E-Mail
Racist, Vulgar Messages Sent on Patrol Car Computers

D.C. Police Chief Charles Ramsey talks with D.C. Police Executive Asst. Chief Terrence W. Gainer during a Senate Subcommittee on Oversight of Government Management. (File Photo/Ray Lustig - The Washington Post)

By Arthur Santana and Allan Lengel
Washington Post Staff Writers
Wednesday, March 28, 2001; Page A01

D.C. police officers have sent each other hundreds of racist, vulgar and homophobic messages on their patrol car computers, and the department is investigating, top officials said yesterday.

The messages "seemed to be a potpourri of hate where apparently black officers were saying negative things against white officers and white against black," Executive Assistant Chief Terrance W. Gainer said.

He said the communications included almost every kind of "idiotic, hateful, spiteful comment" and clearly indicated a problem that calls for drastic action.

Chief Charles H. Ramsey said the police internal affairs unit is investigating the messages. He said he also has notified the U.S. Justice Department about the possibility that they indicate the presence of racial profiling in the department.

"There were comments in there about, 'Let's go punch this person,' or, 'Let's go stop this person,' based on their race or gender or sexual orientation," Gainer said.

The objectionable messages were found among about 4 million computer communications sent over a one-year period. They were accessed by officials at Ramsey's behest to determine how the computers were being used.

The number of offensive messages was not clear last night, but Gainer said there were "hundreds and hundreds of them." He said they had been sent by as much as 10 percent of the 3,600-member force.

"I'm sickened that this type of language and behavior has infected our department," Gainer said. "They embarrassed themselves, insulted this department and sullied our profession. That type of conduct . . . will not be tolerated in this agency."

Gainer said several messages include the "the F-word [and] the N-word."

Also used, Gainer said, were " 'whitey' [and] almost every derogatory term you can come up with for the race or gender of a person."

Ramsey said many of those messages including the N-word were sent by black officers about other black officers, but Gainer said the word is nonetheless objectionable and "doesn't belong in our police department."

Based on preliminary analysis of the objectionable messages, Gainer said vulgarity was the most common offense. He also said there was considerable banter about sexual relations. Many derogatory comments were about citizens, he said.

Gainer said most officers in the department do not share the racist attitudes.

But, he said, "there appear to be significant numbers of people who are either ignorant or racist or homophobic or a terrible combination of all three."

Of the 4 million messages sent via computer, three-quarters were simple requests for license checks and similar information, police said.

Officials said car-to-car messaging was intended to reduce traffic on police radio channels. The computers warn officers that their transmissions are accessible by their superiors. The search of the messages included looking for certain "keywords," officials said.

Gainer said the department condemns the objectionable messages. "We're reinforcing what our policy is and what our core business is -- and that's to help and not hurt people," he said.

Gainer said the investigation could take as long as a month. He said it is not clear what action might be taken against those found to have sent offensive messages. Penalties could include dismissal, officials said.

"I'm going to take very harsh action," Ramsey said. "There is absolutely no room for that kind of behavior in our department."

Sgt. G.G. Neill, chairman of the Fraternal Order of Police, said the messages were unprofessional but that department policy had been unclear and that officers shouldn't be suspended or discharged.

"I think it's just a lack of proper training for officers and an understanding that the communications are public record," Neill said. "I'm sure if officers realized the communications were in the public review, they wouldn't have said what they said."

Deputy Mayor Margret Nedelkoff Kellems said the mayor's office approves the chief's position that "this is intolerable and unacceptable." One police sergeant, who spoke on condition that he not be identified, called the messages unprofessional. He said to the senders, "We don't need you on the department."

D.C. Council member Jack Evans (D-Ward 2) called for action. Racist remarks and profanity, he said, "shouldn't be happening."

Chief Ramsey said, "I thought we [Americans] had come a little further than this."

Staff writer Martin Weil contributed to this report.

A.C. plans for radios spark static

- March 23, 2001 - 12:36 AM
By BRIDGET MURPHY
Staff Writer, (609) 272-7257

ATLANTIC CITY - Although a New York City firefighter's mayday call went unheard in a weekend blaze and 2,700 new digital handheld radios were yanked off the street there, officials here said Thursday that they will proceed with plans to change over to the same 800 megahertz Motorola system.

That's causing some static.

The firefighters' Local 198 President James Morgan expressed concern Thursday, saying that he would be investigating the situation and contacting state union officials.

According to reports, the New York firefighter's call for help over his digital handheld radio was received blocks away by a different group of firefighters, not those at the scene of the basement blaze he was fighting in Queens.

He apparently got lost on his way out of the fire because of a tangled hose line and ran out of air, became disoriented and then collapsed. He was treated and wasn't seriously injured.

The incident prompted the New York City Fire Department to withdraw the handheld radios from firefighters just a week after they were put to use. The department cited numerous communication complaints from firefighters.

In Atlantic City, the equipment for the switch to a Motorola digital 800 megahertz system already has arrived, Emergency Management Chief Bob Levy said. The city has spent about $675,000 so far and plans to switch over the Fire Department from its current radio frequencies by April or May.

Levy said he is aware of the situation concerning New York City, but that the resort's firefighters will be better trained to use the new radios and that all airwave transmissions will be simulcast over the old radio frequencies for at least a month as a safety backup.

He said there's a panic button firefighters can press on the radio that will alert others.

"I know he said, 'Mayday, mayday,' " Levy said of the New York firefighter, adding that the panic button essentially "says it for you."

"The one thing I see possibly done wrong there was they went right to the system and they didn't simulcast," Levy said.

"I spoke to Chief Brenner about this numerous times, and that's why we feel so strongly about simulcasting. My son is a firefighter. I have strong personal feelings here," he said, adding that Atlantic City will field-test its radios.

Two messages left at Fire Chief Benjamin Brenner's office were not returned Thursday.

The Police Department's changeover to the new system could be months down the road. The approximate $1 million needed to buy the equipment for the police currently is not available, but it's included in the 2001 budget, Levy said. The 2001 budget has yet to be approved.

Last year's budget wasn't approved by City Council until August.

In addition to concerns about the reliability of the new equipment, the potential delay could create a different kind of friction - with equipment presently being used.

Officials have said in the past that the city is upgrading the system to eliminate so-called "dead zones," or places where current radios can have transmission problems, such as inside the casinos or the Atlantic City Convention Center.

One communications official said some of the current radios are so old that they're being held together by rubber bands and wires because replacement parts are no longer made.

"We've been concerned about this for years. Thankfully there hasn't been a critical incident," city police union President Sean McCausland said. "We hope they approve the budget and hope it gets moving along expeditiously."

In the meantime, having the fire and police departments on two different systems won't be a problem, police spokesman Sgt. Michael Tullio said Thursday on behalf of Police Chief Arthur Snellbaker.

"We don't operate on the same frequencies at this time, so it's not something that will negatively impact the Police Department's communications. When it's time for the upgrade, we'll welcome it."

Other officials agree there's no real cause for alarm.

"We're being super cautious here. Right now we have plenty of backup. If we have to keep backup, we will. We're doing this as a team," Levy said.

A consequence of the system changeover is that police and fire transmissions will no longer be audible to casual listeners and scanner buffs.

"Yes, that's true. I'm very sorry about that," Levy said Thursday. "But the public safety of our officers is uppermost in our mind and it's secure."

Atlantic County to upgrade radio system

- March 23, 2001 - 12:22 AM
The move will facilitate communications between different municipalities' emergency-response teams.

By THOMAS BARLAS
Staff Writer, (609) 272-7201

Atlantic County is taking the "first concrete step" toward a uniform radio communications system involving county and municipal law enforcement, fire and other emergency-related units.

The goal is to install 800-megahurtz systems, making it easy for those units to communicate with each other by using the same radio frequency instead of the hodge-podge communications methods now in place.

It also scraps an earlier plan for a central county dispatch system, something balked at by municipal police officials, who felt their departments know their communities better than a central dispatch operation would.

"The key thing is a police officer in Northfield can call the county prosecutor and communicate with them directly if they have a fugitive or something," said Freeholder Director Kirk Conover. "There's no need to do roundabout communications or go to a pay phone."

While as yet there's no firm cost for the project, county officials estimate the price tag at around $6 million.

"It's not cheap, but I think the benefit to the public is obvious," Conover said.

The Atlantic County Board of Freeholders this week decided to apply for a $26,250 state Department of Community Affairs grant that will pay for a study of the costs involved in the changeover.

Brigantine, Egg Harbor Township and Galloway Township have already installed some of the equipment that the county is proposing.

"Some towns are ahead of the curve," Conover said. "There needs to be a way that everyone is treated fairly financially."

Capt. Jeff Doran of the Brigantine Police Department said the new equipment has some obvious benefits - it provides for almost unlimited channels for municipal departments and allows Brigantine, Egg Harbor Township and Galloway Township to use each other's systems as backup systems.

However, Doran said he's still concerned about the county and municipalities using systems that turn out to be truly compatible.

"In effect, we haven't really addressed the countywide communications issue yet," he said.

For instance, police note that Atlantic City is about to upgrade its system with equipment from Motorola - a company different than the one that provided the equipment for Brigantine, Egg Harbor Township and Galloway Township.

Conover and Atlantic City officials said they believe equipment from different companies can be made compatible.

The project developed out of a task force that formed five years ago to study the possibility of creating a central county-dispatch system. While the central dispatch system idea was dropped, the task force indicated there was a need for all police, fire and emergency-related units to better communicate with each other.

While the idea sounded simple, Conover said an inventory of just the county's communications system for units like the Proescutor's Office, Sheriff's Office and county jail showed "there was nothing uniform with what we did within the county."

An additional report filed with the county late last year outlines the equipment and other measures necessary to make the proposed system work.

"The key thing to the system is that the operator of the communication device doesn't have to change channels," Conover said.

While the county and municipalities would be using the same radio frequency, Conover said the system is designed so municipalities won't interfere with each other's communications.

Conover said Brigantine, Egg Harbor Township and Galloway Township would serve as the "backbone" of the system because they already have some of the necessary equipment. Other municipalities would eventually start "filling in" with their equipment, he said, and some new communications towers might have to be built, probably in the area of Buena Vista Township.

Conover said the county would like its portion of the system to go online in 2003, when the county's new criminal justice complex in Mays Landing is tentatively scheduled to open.

"That would probably be the logical time," he said.

Do you believe that they are not harmful?

> ...I was just pointing out how silly it was to use something you
> consider harmful to justify legalizing something else that is
> harmful.

I'm having trouble parsing this. It doesn't make any sense to me.

Could you rephrase it?

This matter of harm is poorly understood and even worse discussed. All medicines can be harmful under certain circumstances (and cannabis, opium, tobacco, coca and alcohol are all medicines, whether or not they are part of modern American standard medical practice). It's a matter of relative harm balanced against potential benefit.

>> So your personal experience is far more
>> perceptive than 3 Presidential commissions,
>> the AMA and hundreds of university studies.

> When it comes to my personal opinions (and the way I will continue
> to vote on the drug issue), yes, my personal experience absolutely
> outweighs anything else, including any studies done by pro-drug
> advocates.

And in fact you'd be a fool if you ruled your personal behavior by anything but your personal experience.

The problem comes when you want to rule the behavior of others by your personal experience.

The real problem comes when you take other people's money which you then use to force them to act the way that you want.

1559. Frequencies in Denver, Colorado

LEO's need this secure communication. How else are they going to violate minorities rights and get away with murder. Ask Officer Perez, one of this nations leading LEO. Besides LEO's have nothing to hide. There all on the up and up.
"I never knew a LEO who didn't abuse his LEO authority." God bless those men in blue. There just doing gods work.....keeping the white race white.

I once tried a thru the glass antenna and found that the rubber duckie
on my scanner outperformed the glass mount. And this was with the
scanner sitting on the front seat of my car! I now use a magnet mount.
It really works great.
Paul

It seems that radio dealerships up there are really overpriced. Check
out some domestic dealers first. The only advantage I could see with
buying a scanner in Canada is if you're looking for a full coverage unit
that can't be purchased in the USA

I can name half-a-dozen off the top of my head, and I'm sure there are MANY others out there. Completely digital.

Fortunately most are APCO25 so when a digital scanner comes out we'll be able to monitor again...

Hi,
I am selling a Uniden Bearcat BC-205XLT identicall to BC200XLT but sold by Scanner World USA.
It recieves full 800 Mhz including cellular,A new NiMH battery pack, which means longer battery life, no memory storage so you can charge it at any time.It comes with box,manual, antenna and service manual all in excellent condition,The radio itself is in good over all condition.
Asking $140.00
Pay Pal or postal money order.
Thanks.-Russ
ps. I can send pictues if you would like.
I had it on E/Bay but they cancelled my auction as I had mentioned the cell mod.

ROFLMAO! The 3 presidential commissions would hardly be considered "pro-drug
advocates" nor can one say the AMA is either. You do know what AMA stands
for don't you?

> when it comes to all of those.

IOW ignorance is bliss. Just be honest and say your anti-drug stance is not based on facts or logic but purely on your emotional bias and ignorance of the issue. You used the things it had done to your family and friends as one of the reasons for you stance yet can't address the below but choose to snip it out of your reply.

"Alcohol is a legal drug as is nicotine. If you are so taken by the damage drugs have done to your friends and family you would feel the same about these two and the horrors they have put famlies through and the many deaths they have caused. The numbers are astronomical compared to illegal drugs.

OTOH if it's just a legal issue you need not bring up the family and tragedy side, it has nothing to do with the legal issue."

>to communicate with each other by using the same radio frequency

That does tend to help.

>"The key thing is a police officer in Northfield can call the county
>prosecutor and communicate with them directly if they have a fugitive or
>something," said Freeholder Director Kirk Conover. "There's no need to do
>roundabout communications or go to a pay phone."

There's been an easy solution for that one for quite some time...cell
phones.

>However, Doran said he's still concerned about the county and municipalities
>using systems that turn out to be truly compatible.

Go back to yelling.

>"In effect, we haven't really addressed the countywide communications issue
>yet," he said.

Yell real loud.

>"The key thing to the system is that the operator of the communication
>device doesn't have to change channels," Conover said.
>
>While the county and municipalities would be using the same radio frequency,
>Conover said the system is designed so municipalities won't interfere with
>each other's communications.

Changing PL's is somehow simpler than changing channels? Or will they
just be assigned time slots so they don't interfere with each other?
Police get to use the radio for the first 15 minutes of each hour,
then fire for 15min, then EMS, then city services.

The Lansing, MI Fire Dept. went to the 800 MHz digital State Police system a few years ago and most of them hate it according to dispatchers. The coverage is lousy inside buildings and the digital modulation sounds horrible. They would like to go back to their VHF analog system, but since they have so much money invested in the digital radios that will probably never happen. Obviously politics were involved in that switch, but I find it funny that they said it would help with coordination between other agencies in a disaster. Let's see, Lansing PD is on UHF and has scrapped their plan to go to the MSP system, and every other FD in the area is either on VHF or UHF analog and none plan on switching to anything else anytime soon. What a waste of money!

I recently picked one up at a flea market and discovered that the RDF ones transmit on 1680 mhz while the ones with GPS transponders transmit on 403.05 mhz. Output power varies but is around 300mw. They should be easy to track at 30,000 feet +. One could probably use a yagi to track the signal. A dish might be a bit large to have much gain. Also - one can get ahold of DBS inline amps. while their outer bandwidth edge is around 1700 mhz, they are a good investment. Around here, I've seen them go retail for under $20.00....

How about putting an FM dipole IN the attic? I've done this and it has worked nicely as long as you have the antenna oriented properly. I used 300 Ohm wire as the lead-in.

A likely follow-on to this would easily be the following. What legislator would be willing to vote against this?

Require breathalyzers or reaction-time tests to be installed in the vehicle. Each test result is reported to the insurance company. Results that are within legal ranges would allow the owner to drive the vehicle, but would be recorded by the insurance company. Results that are not within legal range would not allow the owner to drive the vehicle, would be recorded by the insurance company, and reported to local authorities.

Don't want to require a breathalyzer or reaction-time test, because it would be intrusive, take the driver time to perform before using the vehicle, and cost too much? Ok. Instead, have the car's on-board computers monitor steering activity for signs of slow driving and weaving. Activity matching that of a typical drunken driver profile would be recorded and reported.

Wayne

for one thing. digital cable doesn't mean much. it still uses analog signals up to i think it was around chan 45 catv. or somewhere around there. after that. is digital signal. the reason why you don't get fm stereo thru your cable is cause most cable companies now stick a filter in you cable line to stop that. antenna. if you live n a town that has lots of radio stations that are easily picked up. almost any antenna will do. even the poor mans way of using a car antenna. the better and more gain an antenna has. the more you will pick up and may lose close local stations. someone on this NG will know the answer.

I have dealt with both stores and find radioworld to be more reputable. As for the better deal, i believe even with the exchange you can do better in the states. i was pricing the R3 and had to whine to get it matched here in ottawa, radioworld wouldn't match it.

If you are hoping to get cellular coverage on the BC780, they don't have it here either. You will have to buy an icom or alinco, etc to get a full coverage baby.

That looks like real good specs on that charger for the price from what I've seen.
You can ask this question on rec.models.rc.air there are some battery experts that read that group and answer questions. Some of the modelers have aircraft that cost thousands of dollars so they take battery care pretty seriously.

As of 1/1/1999 the FCC turned over (sold) 5MHz of the allocation that had been
used by radiosondes. The new system uses more stable transmitters, better
electronics and many will use GPS. GPS is cheaper to deploy then to upgrade
all the receive sites with improved recievers and more accurate dishs.
The ballons can reach hieghts of 33KM and travel 130miles (strange that NOAA
mixes thier measurements, but isn't that how NASA lost a Mars probe?)
"downwind". They are launched only at 00:00 and 12:00, I assume local not UTC.
The NOAA sites also disagree on the exact new frequencies. On site says 1684 -
1700MHZ and another sites has a PDF allocaton chart that shows 1668-1670 and
1675-1700MHz. Maybe they are as confussed as me.
This is the ultimate fox hunt. And if I snag one, it will be as close as I get
to recovering a satellite!
A friend gave me an older radiosonde transmitter that I can use to test my
equipment and antenna designs. It had a ground plane antenna, that I have
carefully removed and fitted with an SMA connector and I will use it as my
first antenna. I have replaced the antenna with a 50 ohm 1 watt carbon
resistor and I can just receive the signal about 100' away. I cna use mini
coax as a leaky antenna and get a little over 1000' feet.

1601. Underage Driver's License Suspension

Newsgroup: rec.radio.scanner
Date: 2001-03-30 01:43:41 UTC
From: Cold Ice <iceburnx@yahoo.com>
Message-ID: <hxRw6.447464$w35.69701416@news1.rdc1.nj.home.com>
Source record: 67740

i was caught driving while 16 without a license (17 being the age to get one). i went to court and received a 6 month delay from my 17th birthday before being able to get my license. 4 months later, i got a letter from DMV stating my suspension of 6 months for underage driving, but starting on the date i was caught (2 months before 17th bday). so this means that they thought i was 17 at the time, so im really only on a 4 month suspension. Here's my question: They assigned me a full blown driver's license number, it has all the digits and the first 6 digits are the same as a couple kids in my school (they didnt have any license suspesions). I'm wondering if when my suspension is up, can I just use that license number? Or are they going to erase that one? I'm thinking that I'll be able to go in after my suspension and just ask for another license card, pay the fee and ill be good. Anyone know much more about this?

Is there anyway around the Graduated Driver License program? Does anyone know any hints, tips, for getting around the DMV, secrets, etc.
thanks

Source record: 67743

When listening to a trunked system should the bc870xlt be set to scan with the trunk feature on. I see that most transmissions are heard with this off, however, I have heard conversation with it on.

Also, I'm trying to listen to a group of users that are on a Erisson system that has four repeater sites. Would a typical setup give each agency the availablity to use each repeater site at random. Or would they be assigned designated repeaters.

Mike

Not that difficult in implementing an 800Mhz trunked system
>
> : >making it easy for those units
> : >to communicate with each other by using the same radio frequency
> :
> : That does tend to help.

Actually it would be a number of frequencies. Typical big systems run at 20
channels which is 20 frequencies, and your smaller systems running at 5
channels.
> :
> : >"The key thing is a police officer in Northfield can call the county

And that has been available in trunking systems for as long as cellular has
been around.
>
> A cell phone is a radio thus it can be intercepted. But cell phones

A land line can be taped, with a digital radio, trunked or cellular, it
would not be easy to intercept the actual voice conversation.
> : >However, Doran said he's still concerned about the county and

No, but he would have to change groups.

No seperate talk groups, and depending on the number of channels available,
they can all talk at the same time on different channels.

I am trying to find the freq. for a private penitentiary called "prairie correctional facility" located in Appleton, MN. It is owned by the corrections corp. of America, I believe based in Nashville TN. I have managed to find freq.'s for their other prisons but not this one. I have searched till I'm blue in the face, but being new to this I probably overlooked something. Any help would be appreciated...Thanks!

I wanted one too until I read a few posts on yahoo groups Icom r3 lists. The general opinion was that the color LCD ate up batteries, of course you can just use the small LCD. Also, in some of the frequencies that video is sent in, it wouldn't show up on the screen because the R3 couldn't be put in the right receiving mode. I wanted one for the races to watch the in car cameras, but Fox is using digital equipment. (Somebody also reported that even if it wasn't digital, due to the lack of [I think wideFM mode] in that frequency range there would be no picture). It also lacks a large portion of the 900mHz range that is legal to listen to.

It wasn't right for me so I passed.

In my continuing quest for the odd, has anyone ever received the GPS L2 carrier at 1277.6MHz (or some refferences say 1277.5MHz) on a non GPS receiver such as a PCR1000? I am trying to come up with a better antenna for the 1-2GHz band. With PCRFFT (part of PCR1000CUR EEPROM backup and recovery) I can see very weak carriers, like the GOES time signals in the 70cm band, but, is a whole collection of psuedo-random noise modulated carriers going to show up as anything other than background noise?

I had problems receiving all but the strongest FM stations in my office at work. After much experimenting, I found that a mag mount antenna (mobile cellular actually) mounted in the ceiling worked the best. I also use the antenna to scan the local 800 MHz systems. The key here is to just try different antennas in different positions or even piece of wire until you get a good signal. Before a got the antenna, a simple wire running up the wall got decent results.

As far as the Sony receiver not performing well, I have seen this with JVC, Pioneer and Kenwood receiver. I believe the manufacturers may be giving up some sensitivity to get better image rejection or interference. I could be wrong on this.

Look on the back for a FCC ID number if there is one then go to the FCC site
and enter it.

http://www.fcc.gov/oet/fccid/

BTW, don't post binaries to discussion groups since servers delete
them upon arrival.

Okay, to defend your argument that certain drugs should be legalized, you pointed out that those drugs are no more harmful then alcohol and nicotine, which are both legal. And I responded that it was silly to point to something harmful in an attempt to justify the legalization of something else that is harmful. If you're right that alcohol and nicotine are harmful (and I have made no comment on that, one way or the other), why would we want to add to those problems by legalizing something else that is harmful, even if it is no more harmful the alcohol and nicotine? Got it, now? It is a silly argument that hardly justifies the legalization of drugs.

First of all, there is nobody alive today that is ignorant of drugs. The problems associated them exist throughout our country - in the smallest towns and the largest cities. And I'm not basing my opinion on emotional bias - I'm opposed to any use of drugs, even where there are no emotional attachments involved with the people using those drugs. Again, my opposition is directly as a result of my own personal observations of those around me who use drugs.

> "Alcohol is a legal drug as is nicotine. If

I've already addressed that, Glen. Several times (note my post to Josh Geller in the "Drug Prohibition" thread, a thread that was started from this thread, for my most recent response). I'm not going to keep repeating myself for those asking the exact same thing that has been asked before.

Probably not. The modulation of the C/A code spreads it across 2 MHz of
bandwidth; the military P(Y) code is spread across 20 MHz. In both cases,
I think the signal level is expected to be below background noise in
a narrowband receiver.

No. The signal is much weaker than the background noise when you don't
de-spread it. That is a feature of the spread-spectrum system used by GPS.

Same is true about daily life. Those who have people around
that support them in their beliefs, who will come to their defense
are often more successful. Groups have more power (strength
in numbers) than individuals. The more organized the group, the
more likely that no one messes with them. Also if you pool your
assets then you can afford better lawyers. Even government leaves
you alone and seeks easier targets.

:
: Don't you?

No, just legalizing drugs will not get rid of the gangs. They will
just move on to other criminal activities. That is because they are
more about "political" power. A gang is a way for oppressed groups
to protect themselves while making money. They have found that
there is strength in numbers, as opposite to the extreme individualism
of many here on the NGs.

Plus, as I have said before, we might see marijuana legalized but it will
be regulated like tobacco. In fact I would expect to see Big Tobacco

control pot if it is legalized. But then pot is a small problem compared with cocaine or meth. And pot does not generate the money that coke does.

Heroin will not be legalized but rather will be treated as a medical problem .
Most likely heroin addicts will be allowed to buy the drug thru clinics for $20 a fix but have to use it on site. But again, heroin is not the problem, nor the money maker, that cocaine and meth are.

No one knows how to regulate cocaine and meth. Users can be violent. Usage can cause death. Even a light version of meth, Ecstasy, causes a lot of deaths thru misusage. And coke and meth are where most of the money is.

I have recieved radiosondes at both 403 MHz (many times) and 1680 MHz.
They sound quite musical. Note frequency stability in the past has not been
good. Some older ones also used LORAN, instead of GPS. In their case, it
sounded like they just re-transmitted the 100 kHz LORAN signals multiplexed
into the radiosonde frequency.

Mr. Stewart, I did no such thing.

That was, I believe, the person you responded to when you said <<<...I
was just pointing out...>>> above. That person is not I.

I would never make the argument you specify.

> If you're right that alcohol and nicotine are harmful
> (and I have made no comment on that, one way or the other)...

This is the other thing you said before.

I asked you if you believed that they were not harmful.

I ask you again, sir: do you think that the currently legal drugs
alcohol and tobacco are harmful?

Don't assume that you know what argument I am making. If you have read
my posts at all, you know what my attitude is. If not, it will come
out in the course of this conversation.

And please sir, do not confuse me with any of the other people you may
have been arguing with earlier on in this thread. I do thank you
sincerely.

Isn't that what the government has been attempting to do, and failing
miserably.

Also, have you ever thought that the restriction might add to the sorts
of drug abuse that most agree are negative? For instance, many foresaw
the increased use of crystal meth when the courts gave LEOs free reign
to ferret out marijuana.

I'm sure marijuana, heroine, pcp, e, or any number of alphabet soup of chemicals surely increase a persons ability to perceive the world around them. What planet are you from kid? They do nothing of the sort but IMPAIR your ability to act properly in society.

> Isn't that what the government has been attempting to do, and failing
> miserably.

Simply, as the criminals that drug users are, they tend to hide like rats in the sewers of society to avoid prosecution. If you guys so vehemently believed that drugs should be legal why don't you stasnd by your convictions and do them in public in plain sight and in the day time where everyone can see you (and label you a junky)?

No you haven't. You said ". And I responded that it was silly to point to something harmful in an attempt to justify the legalization of something else that is harmful."

I am not saying to legalize drugs. Read it again and try a real answer this time. Why do you choose to fight the few horrors of illegal drugs but ignore the many horrors caused by legal drugs? Why do you not condemn them all?

Glenn

Dear Rob

It's difficult to tell whether or not you are addressing me here, but
I certainly don't use any drugs that limit the ability to reason.

> Have you ever thought that drugs which enhance a persons ability to
> perceive and disseminate information, to be objective, pose a danger to

Talk about dueling realities!

>> And wouldn't it be a good idea to eliminate
>> them from use ?

I don't think that anything in the pharmacopeia should be thrown out,
even if these moderns think that their new drugs work better.

I think that people should have available to them any medicine that
might possibly be useful in curing the extensive variety of ailments
that inflict living beings.

> Isn't that what the government has been attempting to do, and failing
> miserably.

These things tend to play themselves out.

But people never learn: we'll have a tobacco prohibition soon enough.

Dear Rob,

Cannabis has been used as medicine for tens of thousands of years,
right up until the twentieth century. It is good for all sorts of
things.

You don't have to take my word for this. It is merely necessary to
condsult a sufficiently old pharmacopeia or materia medica.

Cannabis doesn't necessarily impair a person, though it can be
abused like any medicine can be abused.

Heroin is an extract of the opium poppy. It is extremely useful for
treating very severe pain, and is so used in a number of places. It is
extremely addictive, but otherwise reasonably harmless,

PCP is an animal anesthetic. Its effect seems to be similar to some of
the various medicines that traditional priests and magicians have used
for a very long time. The deleriant effect resembles datura or
belladona: the storied 'superhuman strength' resembles amanita
muscaria.

All of these latter are extremely serious drugs, and I personally
could not in good conscience recommend that anyone use them. They are
undeniably useful when used properly, but it is very easy to wind up
dead or insane.

Ecstasy I don't know much about. It's a new drug, which in itself
disinterests me. I figure that you can't really work out the bugs in a
medicine in less than a couple of thousand years minimum. Still, some
people seem to enjoy it, and they seem to be pretty harmless folks,
taking one with another.

> They ... IMPAIR your ability to act properly in society.

The PCP certainly can.

Heroin can if you are addicted to it and the price is kept
artificially high.

Cannabis, as I say, is basically harmless. All sorts of people
(including myself) use cannabis daily and function quite well.

I suppose its possible that there is some long-term effect from
ecstasy that won't show up until later life. That's certainly not
sufficient reason, in my mind, to keep a free adult person from using
it.

I have a question for you.

What is 'acting properly'?

>> Isn't that what the government has been attempting to do, and failing
>> miserably.

Some people are more subject to personal fear than others, Rob.

Personally, I take little or no trouble to hide my cannabis use.

Best to you,

Source record: 67688

THAT shouldn't be allowed! I DO have relatives who died in WWII, and while we should forgive, we must not forget lest we have to repeat history. Still, I will not drive a Japanese car to this day, especially Mitsubishi (remember the Zero?). I recently saw one of those tricked out Hondas with all the Japanese writing. The thing even had the rising sun flag on the front. For me, it is Chevrolet all the way! Yeah, I know many of them are made outside the US, but it is still an American brand with a time-honored American name (Name is French, but after an American race driver).

Finally, one of the things that confirmed my feelings about the Pacific War was a news blurb I heard out of Pearl Harbor a few years back. Seems an American was on the Arizona Memorial mourning his father who died on that ship on Dec 7, '41. A group of Japanese tourists came on board and began to laugh, mock, and otherwise make fun--even bragging about THEIR relatives who played a part in the sinking of USS Arizona. The American became furious, grabbed two of the Japanese males and tossed them overboard, and had ahold of another before the Navy guys could subdue him! This caused tension between the residents of the area, other American tourists, and the Japanese that came to see this Memorial. For a time--and I don't know if it is still true--Japanese tourists and Americans were not allowed on the Memorial at the same time for fear that more people would get a dunking! For many people, Pearl Harbor is STILL a sensitive issue, the deaths of their friends and family members is STILL fresh in their minds, and the idea of some sort of memorial to those who attacked the USA on BOARD one of our ships is a slap in the face.

??? As far as I know, tobacco does not "limit your ability to reason". It may limit your ability to live, but that's a different story.

The withdrawal from tobacco sure does "limit your ability to reason" (speaking from experience).

But alcohol certainly does limit your ability to reason and can make you a danger to society. I was asking this poster if, given that as a rationale for eliminating drugs, would he support eliminating alcohol.

/Sarcasm on
It sure worked well during prohibition
/Sarcasm off

I agree.

That's what we're going to ban next, though.

I don't agree with it. I use tobacco myself.

> The withdrawal from tobacco sure does "limit your ability to reason"
> (speaking from experience).

I've been using this caporal rolling tobacco recently. I smoke
anywhere from one to half a dozen cigarettes a day.

It's much nicer than any commercial cigarette. Those things are bad
for you. As much as 30% of a manufactured cigarette is not tobacco at
all, and the manufacturers are not in any way obligated to tell you
what all else is in there.

> But alcohol certainly does limit your ability to reason and can make you a

> /Sarcasm off

I don't like this relative harm argument.

A free adult human being has the right to do what he likes, as long as he doesn't harm anyone else.

That's the American way, and that's the basis for my opposition to drug laws.

1656. San Antonio Scanning Resources!

Hello San Antonio Scanner Listeners!

We've got two great new scanning resources for the area -->

The San Antonio Scanning Mailing List:
http://groups.yahoo.com/group/satscan

The San Antonio Communications Resource
http://www.lcblanton.com/satscan.htm

Stop by, and see what's happening at each!

Warmest regards,

Lindsay Blanton

1657. Speech/Frequency Inversion Descrambling!

Newsgroup: rec.radio.scanner
Date: 2001-03-30 18:51:22 UTC
From: ctpds49@aol.com
Message-ID: <20010330135122.28034.00003162@ng-mi1.aol.com>

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

I recently started using the WACARS v0.7 software, to decode ACARS transmissions. It runs fine...for about 10 minutes and then my PC runs out of resources and crashes. I am using WIN98, and a SB Live soundcard. My PC is a P-II 350 w/192MB of RAM. Has anyone else out there run into this problem, or know how to resolve it? E-Mail to me is fine. Thanks!

This item should have been posted in an law enforcement group. It's totally "OFF" topic for this group.

In answer to your last paragraph. Contact the Motor Vehicle Division in your state, they have the proper answers.

"This is a radio scanner group"

I never said that medicine (adminstered legally)should be banned. But those
that are already illegal, and illegal use of legal drugs should remain
banned and the police whose duty it is to arrest the users should be
commended and there should be more of them!

These laws fail because they attempt to ban popular activities.

A lot of people like to use drugs, but if you exclude alcohol and
tobacco, they are still a minority.

Most people like to drink.

There are good arguments for prohibition - well, there is one - but I
have rarely seen anyone make it.

> Dear Rob,
>
> Cannabis has been used as medicine for tens of thousands of years,
> right up until the twentieth century. It is good for all sorts of
> things.

Once again. Marijuana is used regularily for glaucoma patients. I see no wrong in this and the fact is it is legal for medicinal purposes. But, those who use it because they don't enjoy life as it is and use it illegally to fix this I do find trouble with. Perhaps councelling and legal drugs could aid in making life better for them. but the fact is drugs are a quicker (and less effective) means of doing what a doctor could. And, often drug users are in the same boat as suicidals, as they are looking for the easy way out of lifes problems.

> You don't have to take my word for this. It is merely necessary to
> condsult a sufficiently old pharmacopeia or materia medica.

I have no problem with other peoples opinions. I state mine based on the legalities of the country I am in. If I don't agree with the law, I don't break it. I would however lobby to have it corrected.

> Cannabis doesn't necessarily impair a person, though it can be
> abused like any medicine can be abused.

And abusing medications is just as illegal as illicit drug use. And you have to face it, the average drug user does not do so socially, but to get stoned.

> Heroin is an extract of the opium poppy. It is extremely useful for
> treating very severe pain, and is so used in a number of places. It is
> extremely addictive, but otherwise reasonably harmless,

As I mentioned before, I am not here to negotiate the medicinal purposes of certain illicit drugs, but the fact that there are reasons why there are laws to guard against their use because people abuse them readily!

> PCP is an animal anesthetic. Its effect seems to be similar to some of
> the various medicines that traditional priests and magicians have used
> for a very long time. The deleriant effect resembles datura or
> belladona: the storied 'superhuman strength' resembles amanita
> muscaria.

Any use of any one of these drugs without a prescription and not within the means of the prescription is an abuse. As simple as that. You are not a

doctor and thereby you can not prescribe a drug for your use nor could you for any one elses use legally. It is a simple matter ... you can't very well go out and break any law that you simply don't agree with, that puts you in the same boat as homophobes who believe in killing gays and white power guys who kill blacks (among others). They break laws because they feel that they have a right to bsaed on their belief system.

> All of these latter are extremely serious drugs, and I personally
> could not in good conscience recommend that anyone use them. They are
> undeniably useful when used properly, but it is very easy to wind up
> dead or insane.

Even moderate use of marijuana, hash oil have been proven to damage certain portions of neurons (namely dendrites)

> Ecstasy I don't know much about. It's a new drug, which in itself
> disinterests me. I figure that you can't really work out the bugs in a
> medicine in less than a couple of thousand years minimum. Still, some
> people seem to enjoy it, and they seem to be pretty harmless folks,
> taking one with another.

As mentioned before, the average user does not take drugs socially, but so that they can get buzzed. And, once again, as mentioned previously, moderate drug use does have effects, albeit not as severe, but they are cumulative and over time will lead to serious damage.

> > They ... IMPAIR your ability to act properly in society.
>
> The PCP certainly can.
>
> Heroin can if you are addicted to it and the price is kept
> artificially high.
>
> Cannabis, as I say, is basically harmless. All sorts of people
> (including myself) use cannabis daily and function quite well.

I can guarantee you that you do not perform as well as you would have if had you not been on it. The very fact that you use it daily shows an addiction, which on its own can be an impairment.

> I suppose its possible that there is some long-term effect from
> ecstasy that won't show up until later life. That's certainly not
> sufficient reason, in my mind, to keep a free adult person from using
> it.

You sure wouldn't think that if yu met up with someone who had been using it before getting behind a wheel of a car.

> I have a question for you.
>
> What is 'acting properly'?

Well within the bounds of the law of course. That, and being able to reason properly (having your wits about you). And, being able to differentiate the difference between fact and fantasy. (Which in my experience with dealing with active drug users is a majority of the problem)

> Some people are more subject to personal fear than others, Rob.
>
> Personally, I take little or no trouble to hide my cannabis use.

I very well doubt you'd go out with a pipe and a bag marked pot and go smoke in public. More than likely you roll a cigarette so as to hide its true nature.

True -- in most cases that would make my #2 unworkable. But, in the unpredictable twists of the law, it might apply in some cases. More promising, however, would be my point #1:

>>(1) The accused and/or his lawyer, could be offered a videotaped
>>Sixth-Amendment chance to "confront" the witness during the original

I'm all for drugs as long as they are easily available for cheap so people don't run around beating each other over
the head and pawning everyone's stuff.
Also, it should be manditory that people should only be able to do drugs behind closed doors.
Absolutely no driving while on drugs or coming off drugs and absolutely no being on drugs in public.
THe penalty? Being shot on the spot for endangering and risking the lives and well being of others.

AMAZING!!! A Rat Shack/Tandy salesperson actually knew what they were talking about. I think it is time to call Guiness about this for the next book. I have usually found the most incompetent people working at Rat Shack.

One thing a salesperson told my brother is now one of our inside jokes. My brother was looking for a special battery. He couldn't find an identical one, but he found one that was of the same voltage and would fit in the housing needed. The salesperson "cautioned" my brother that because their battery had more mAH's than the original, it may "push too much current through the device."

BTW, my brother never had a problem with too much current being pushed through his device.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises, |
http://www.grove-ent.com but views expressed in this
article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire

engines, ambulances, airplanes, armored cars, trains, taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a

personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. http://www.grove-ent.com |

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC780XLT, BC895XLT, BC245XLT, SC200, and Radio Shack PRO-92 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for

extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is | available from Grove Enterprises http://www.grove-ent.com | for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's

book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for |
Monitoring Times magazine, published by Grove Enterprises |

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine, | published by Grove Enterprises, http://www.grove-ent.com

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't

interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large

Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack store. Each Radio Shack store has a book containing frequencies and stock numbers. The crystals are mailed to your home within 10 days.

You can also order scanner crystals from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 941-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

Monitoring Times magazine, published by Grove Enterprises |
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated

circuits. The radio must have been made after the most recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature

(logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two

BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

published by Grove Enterprises, http://www.grove-ent.com |
but views expressed in this article are his own.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)

25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2001 - ILLINOIS
last updated February 4, 2001

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Ralph Zancha, and ARRL for providing some of the information.

APRIL 2001

Apr 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM.

Apr 1 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Apr 29 (Sun): Arthur, IL - Moultrie ARK. 8AM - 1PM. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937. Daytime phone 217-543-2178 evening 217-873-5287. Email: rzancha@one-eleven.net Or write to M.A.R.K., P.O. Box 91, Lovington, Illinois, 61937.

MAY 2001

May 6 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

May 6 (Sun) - Sandwich, IL - DeKalb Hamfest. Sandwich Fairgrounds (intersection of Suydam and Gletty roads). 8AM - 1PM. 3 indoor buildings. Admission $6.00. No VEC testing. Talk-in on 146.730/- or 146.520. Info: W9ICU at (815)895-3310, email w9icu@home.com. http://tbcnet.com/~jleonard/hamfest.htm (small to mid-sized hamfest. Nice drive in the country. Good restrooms. -AJ9S)

May 27 (Sun): Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell, Chicago, IL. 8 AM - 2 PM. setup at 6 AM. Indoor/outdoor flea market. Free parking. Tickets $5 at the door. Outdoor fleamarket space is free. Indoor table space is $1.50/ft. Info: George (773)545-3622 or Dean (708)331-7764 or write to CARC, PO BOX 410535, Chicago, IL 60641-0535.

JUNE 2001

Jun 3 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Jun 3 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: tel. 1-815-856-3773, (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 10 (Sun): Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. 2015 Manchester Rd (north of Roosevelt Rd, east of County Farm Rd). Gates open at 7 AM, buildings open to public at 8 AM. Admission $6. VE testing. Talk-in on 146.52 and 146.37/97 (107.2 Hz PL). Info: http://cyberconnect.com/orion/hamfest.htm or contact Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 708-442-4961 . Email: wa9rij@mc.net

JULY 2001

Jul 7 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Starts at 6 AM. Talk-in 146.52 MHz (WA9TXE). Info, call (414)762-3235.

Jul 8 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz repeater. http://www.w9az.com. Admission $6. Info: Chip Moore, K9IOC, 289 S. Euclid Ave., Bradley, IL 60915. Email: karsfest@yahoo.com

Jul 15 (Sun): Washington, MO - Zero Beaters ARC Hamfest. Bernie E. Hillerman Park (Washington Fairgrounds) Free parking. Free admission. VE exams. Talk-in on 147.24 MHz repeater. Info: Keith Wilson K0ZH (636)629-2264, fax (636)629-1196. Bob Goza W0BOB (573)484-3718, w0bob@arrl.net. http://www.yhti.net/~w0bob/zbarc

Jul 22 (Sun): Sugar Grove, IL - Fox River Radio League Hamfest. Waubonsee Community College. Rt 47 at Harter Rd. Admission $5. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2001

Aug 5 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Aug 12 (Sun): Peotone, IL - 67th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea

market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $5.00 in advance with double stub, $6.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Robert Nelson, WB9FWR, 1720 Vollmer Rd., Flossmoor, IL 60422. (708)756-7984, email WB9FWR@aol.com. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 26 (Sun): Joliet, IL - Bolingbrook ARS Hamfest. Inwood Recreation Center, 3000 W. Jefferson St (Rt 52). Outdoor flea market setup at 6 AM. Admission $5. VE testing. Talk-in 147.33+ MHz and 224.54- MHz repeaters Info: Tom Ballard N9LJY, (630)739-3740. (Small to midsize hamfest with good restroom facilities - AJ9S)

SEPTEMBER 2001

Sep 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Sep 22 & 23 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Admission $8, good both days. Ladies program - Arts and crafts. Grounds open Thursday at noon. Flea Market open both days at 6 AM. Exhibit buildings open Sat 8 AM - 4 PM and Sun 8 AM - 3 PM. VEC testing. Free camping and parking. Talk-n on 146.16/76 MHz (107.2 Hz PL). Info: http://www.chicagofmclub.org. Tel: 630-628-1501 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 2001

Oct 7 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

NOVEMBER 2001

Nov 4 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. No tailgating. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 4 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

DECEMBER 2001

Dec 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park

Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Tinley Park Civic Center, 185th St. & Harlem Ave., Tinley Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. for adults and children under 12 get in free. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held monthly from 9:30 AM to 4:00 PM. Admission is $6 with free parking. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Held in the Ballroom of the Holiday Inn, 6161 W. Grand Avenue, Gurnee Illinois. For info, visit the web site at http://www.ccxpo.com.

last changed March 21, 2001 |

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 2001 by Bob Parnass, AJ9S |

[NOTE: The first version of this article appeared in the
RCMA Newsletter, December 1988. It may not be reproduced
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author. It is posted twice monthly on
the USENET groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does
to keep it open.

Models cursed with too much hysteresis include the
Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003,
PRO-2004, and others. Don't despair, the fix is simple for
most radios. I've successfully reduced the squelch
hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024. Grove Enterprises | http://www.grove-ent.com occasionally sells manuals, too.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises, |
http://www.grove-ent.com but views expressed in this article
are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040

receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.

Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features

than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies

found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search

limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117

VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given

frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather

alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There

three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility

not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:

A person who's drunk in public or drinks and drives is breaking the law.
But people still do it. Banning it is the only way to ultimately limit the
crimes people commit because of drugs

I plan on installing a permanent mount (NMO) in my car for an antenna and curious as to what type of coax cable is best for use in a car. It needs to fit under headliner/carpet/under moldings etc, but I want as low of loss cable as possible under most frequencies (VHF will be used mostly). I could buy a mount with coax already attached but I don't know if, 1) the coax is high quality and 2) if the included cable is long enough.

Source record: 67634
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm told that the Pro-2067 is able to be installed in a DIN slot in a car and want to know if there is any mounting supplies I'll need, if I choose to buy this scanner and install it. I'd like to get the BC780XLT, but I'd really like to install this in the dash and it looks like the 780XLT is a bit too big for fitting in a DIN slot... too high. For more specific info, I am wanting to install this in the cup holder/coin tray slot, under the stereo in my 1995 Ford Taurus. I pulled that unit out and it looks to be the exact size as the old factory stereo, so I'm assuming it is DIN-E.

What I'm trying to find out, though, is why you care so much about
this.

They want to get stoned, let them get stoned.

If they make a problem when they're stoned, sanction them for making
the problem.

> It is a simple matter ... you can't very
> well go out and break any law that you simply don't agree with, that puts

You know, I've looked at this, and I've thought about it, and I think
you're dead wrong.

I don't think that it is immoral to break immoral laws.

I don't consider laws against murder to be immoral.

Of course, you can do as you like. I'm not in the business of minding
other people's business.

I actually don't habitually break any laws currently.

> Even moderate use of marijuana, hash oil have been proven to damage certain
> portions of neurons (namely dendrites)

You got a url that points to a technical paper that describes this?

>> Ecstasy I don't know much about. It's a new drug, which in itself
>> disinterests me. I figure that you can't really work out the bugs in a

>> people seem to enjoy it, and they seem to be pretty harmless folks,
>> taking one with another.

> As mentioned before, the average user does not take drugs socially, but so
> that they can get buzzed.

I think that the E-heads do mostly use socially. Who ever heard of a
one man rave?

> And, once again, as mentioned previously,
> moderate drug use does have effects, albeit not as severe, but they are
> cumulative and over time will lead to serious damage.

>> Cannabis, as I say, is basically harmless. All sorts of people
>> (including myself) use cannabis daily and function quite well.

> I can guarantee you that you do not perform as well as you would
> have if had you not been on it.

I do OK. Make decent money, pay my taxes, support my family. My
companies make their payroll.

If I don't smoke weed my back hurts really bad, and I twitch. Also, my
productivity goes way down.

So, thanks for your concern, but I think I'll just keep on like I've
been doing. I just thank God that medical cannabis is legal in California
and I don't have to worry (at least) about going to jail for smoking.

Here's the difference between you and me:

You are sitting there telling me how I should live.

I am not sitting here telling you how you should live.

>> I suppose its possible that there is some long-term effect from
>> ecstasy that won't show up until later life. That's certainly not
>> sufficient reason, in my mind, to keep a free adult person from using
>> it.

> You sure wouldn't think that if yu met up with someone who had been
> using it before getting behind a wheel of a car.

No, I think that if someone does something that endangers other
people, they should be stopped.

So if someone's driving like a fool, I don't care if they are stoned or sober, I want them off the road.

It certainly has no effect on the opinion I express above.

If someone wilfully impairs themself and gets behind the wheel, that's another matter. I don't think that that should be lawful.

>> I have a question for you.

>> What is 'acting properly'?

>> Personally, I take little or no trouble to hide my cannabis use.

> I very well doubt you'd go out with a pipe and a bag marked pot and
> go smoke in public.

Well, like I say, I smoke weed legally, these days, and it is part of the law that you aren't supposed to smoke in a public place. So I'll go off somewhere.

> More than likely you roll a cigarette so as to
> hide its true nature.

No, if you see me smoking a cigarette, it's got tobacco in it, even if it does look hand rolled. Cannabis goes better in a pipe, though, at least in my opinion.

You know, Rob, I don't think we are going to agree on this one.

Rob, I don't think that drugs should be illegal.

They weren't any of them illegal up until about 1912.

I want to return to the status quo ante.

I don't have a problem with reasonable laws.

Laws against murder, theft, assault, rape.

That kind of thing.

Say Rob, do you think fornication should be illegal?

How about adultery? Sodomy?

1709. CenCalScan mailing list

Newsgroup: rec.radio.scanner
Date: 2001-03-31 00:42:12 UTC
From: "Chris E. Halladay" <trek5150@mediaone.net>
Message-ID: <EJ9x6.115903$Ch.15491717@typhoon.we.rr.com>
Source record: 67547
Cross-posted to: alt.radio.scanner,rec.radio.scanner

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

I do have members that live in such places as Oregon and New York. So, the part about living in central California is not set in stone.

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

> You mean that these people make trouble for you?
>
> How do they do that?

Naah, but everyone has things they dislike ... its just a fact of life ...
I've just had so many bad dealings with people who use and abuse drugs that
I am quite biased in the opinion.

> What I'm trying to find out, though, is why you care so much about
> this.
>
> They want to get stoned, let them get stoned.
>
> If they make a problem when they're stoned, sanction them for making
> the problem.

I used to work in shelters here in ottawa. There was a stabbing over one
stupid joint. enough said. If they weren't drug addicts then there
wouldn't have been a problem.

> You know, I've looked at this, and I've thought about it, and I think
> you're dead wrong.
>
> I don't think that it is immoral to break immoral laws.
>
> I don't consider laws against murder to be immoral.
>
> Of course, you can do as you like. I'm not in the business of minding
> other people's business.
>
> I actually don't habitually break any laws currently.

Well, I believe that the laws are there for the good of the country (sounds
corny but if people obeyed them society would work far better). It's just
that when you do drugs, it's not just your business, because the people who
you live with have to deal with you that way, that goes for people outside
the house too.

> > Even moderate use of marijuana, hash oil have been proven to damage
certain
> > portions of neurons (namely dendrites)
>
> You got a url that points to a technical paper that describes this?

I'll check it up ... gimme a few days ... working on something right now

> I think that the E-heads do mostly use socially. Who ever heard of a
> one man rave?

What I meant by social was they do it because the others do it ... and not
jsut to enhance the mood (most drinkers use that excuse) but to get full
blown stoned.

> I do OK. Make decent money, pay my taxes, support my family. My
> companies make their payroll.
>
> If I don't smoke weed my back hurts really bad, and I twitch. Also, my
> productivity goes way down.

Aspirin works nice too

>
> So, thanks for your concern, but I think I'll just keep on like I've
> been doing. I just thank God that medical cannabis is legal in California
> and I don't have to worry (at least) about going to jail for smoking.
>
> Here's the difference between you and me:
>
> You are sitting there telling me how I should live.
>
> I am not sitting here telling you how you should live.

I am not at all telling you how to live ... I am merely stating my opinion
and giving reasons and trying to understand why you do it is all

> No, I think that if someone does something that endangers other
> people, they should be stopped.
>
> So if someone's driving like a fool, I don't care if they are stoned
> or sober, I want them off the road.
>
> It certainly has no effect on the opinion I express above.
>
> If someone wilfully impairs themself and gets behind the wheel, that's
> another matter. I don't think that that should be lawful.

See if people were able to use in moderation, and not hurt others than
legalisation would work. But, unfortunately they won't. More people would
abuse and drive, or commit crimes to obtain them.

> Well, like I say, I smoke weed legally, these days, and it is part of
> the law that you aren't supposed to smoke in a public place. So I'll
> go off somewhere.

Up here it's still illegal

> No, if you see me smoking a cigarette, it's got tobacco in it, even if
> it does look hand rolled. Cannabis goes better in a pipe, though, at
> least in my opinion.

>
> You know, Rob, I don't think we are going to agree on this one.

See thats the fun about debating ... its far more enjoyable to talk about contraversy than to a bunch of guys who have the same opinion and agree to every word that you say.

But to prove my point ... someone keeps calling my cell to tell me to post in alt.radio.flame_fest (i think thats it) when for the most part I believe i have tried to keep this quite civil.

1713. FS: REGENCY Z60 60 CHANNEL SCANNER

Newsgroup: rec.radio.scanner
Date: 2001-03-31 00:51:48 UTC
From: Paul McCoy <kb0zmt@home.com>
Message-ID: <ES9x6.181804$t67.2932357@news1.rdc1.il.home.com>
Source record: 67551

FOR SALE:

Regency Z60, compact, programmable 60 channel scanner.

This is a three band, FM monitor receiver and digital alarm clock for use at home or on the road. It is a double conversion, superheterodyne used to receive the narrow band FM communications in the amateur, public safety and business bands: 30-50, 144-174, and 440-512 MHz.

This unit is in excellent condition with no visible damage and includes user's manual and telescoping antenna.

The unit works fine including all the LED readouts. As with all used electronics, "as is" applies.

Price: $45, Shipping Included via Priority Mail.

Buyer must prepay with money order or cashier's check.

If interested, please email: kb0zmt@home.com

This reminds me of a friend who went to RS to buy a roof top television antenna.
He picked out the one with the most elements, hence the most gain given that it would be aimed correctly. The salesman told him that this antenna was too powerful, and the radio waves would just go over it.

:
: In other words, you believe that you have the right - the duty, even -
: to dictate the way other people conduct their lives.
:
: Or do I misunderstand you in some way?

I think that you have nailed it. It is not socialism but rather
Puritanism which is at work. It is as American as apple pie.
It is small town America, sticking your nose into other people's
business and telling how to run their lives. Millions of American
women have done so for centuries.

Even Victorian England was much the same. Now we have a
neo-Victorian Age. And many American women have made
it their duty to ban smoking, guns, drugs, or male behavior. If
they can not ban the activity then they banish those who do so.
Prison for those who do drugs and out of the office for those
who smoke. And God help you if you act like a male.

```
: >> Have you ever thought that drugs which enhance a persons ability to
: >> perceive and disseminate information, to be objective, pose a danger to
: >> those who shape society for their own benefit?
:
: > I'm sure marijuana, heroine, pcp, e, or any number of alphabet soup of
: > chemicals surely increase a persons ability to perceive the world around
: > them.
:
: Dear Rob,
:
: Cannabis has been used as medicine for tens of thousands of years,
: right up until the twentieth century. It is good for all sorts of
: things.
:
: You don't have to take my word for this. It is merely necessary to
: condsult a sufficiently old pharmacopeia or materia medica.
:
: Cannabis doesn't necessarily impair a person, though it can be
: abused like any medicine can be abused.
:
: Heroin is an extract of the opium poppy. It is extremely useful for
: treating very severe pain, and is so used in a number of places. It is
: extremely addictive, but otherwise reasonably harmless,
:
: PCP is an animal anesthetic. Its effect seems to be similar to some of
: the various medicines that traditional priests and magicians have used
: for a very long time. The deleriant effect resembles datura or
: belladona: the storied 'superhuman strength' resembles amanita
: muscaria.
:
: All of these latter are extremely serious drugs, and I personally
: could not in good conscience recommend that anyone use them. They are
: undeniably useful when used properly, but it is very easy to wind up
: dead or insane.
:
: Ecstasy I don't know much about. It's a new drug, which in itself
: disinterests me. I figure that you can't really work out the bugs in a
: medicine in less than a couple of thousand years minimum. Still, some
: people seem to enjoy it, and they seem to be pretty harmless folks,
: taking one with another.

Modern American Puritanism does not allow you to
make that decision. Unless you are supervised, no
```

drugs. The women of America demand that you be
under control.

: > They ... IMPAIR your ability to act properly in society.
:
: The PCP certainly can.
:
: Heroin can if you are addicted to it and the price is kept
: artificially high.
:
: Cannabis, as I say, is basically harmless. All sorts of people
: (including myself) use cannabis daily and function quite well.
:
: I suppose its possible that there is some long-term effect from
: ecstasy that won't show up until later life. That's certainly not
: sufficient reason, in my mind, to keep a free adult person from using
: it.
:
: I have a question for you.
:
: What is 'acting properly'?

Being a proper "Victorian male". Being under
the control of the well educated women of America.

: >> Isn't that what the government has been attempting to do, and failing
: >> miserably.
:
: > Simply, as the criminals that drug users are, they tend to hide like
rats in
: > the sewers of society to avoid prosecution. If you guys so vehemently
: > believed that drugs should be legal why don't you stasnd by your
convictions
: > and do them in public in plain sight and in the day time where everyone
can
: > see you (and label you a junky)?
:
: Some people are more subject to personal fear than others, Rob.
:
: Personally, I take little or no trouble to hide my cannabis use.

But then you are an uncontrolled "male". And males like
you are dangerous, even anti woman.

> else that is harmful."

And that's the answer, Glenn. What else can I say? The "legal drug" versus "illegal drug" argument is silly, therefore it is simply silly to discuss it further.

> I am not saying to legalize drugs.

Oh, come on. At least try to be honest. Your whole effort in this thread so far has been to minimize the harmful effects of illegal drugs with the goal of convincing people that those illegal drugs should be made legal like alcohol and nicotine.

> Read it again and try a real answer this
> time. Why do you choose to fight the few
> horrors of illegal drugs but ignore the
> many horrors caused by legal drugs? Why
> do you not condemn them all?

I'm not saying more about alcohol and nicotine because I don't want to talk about that beyond what has already been said. Now, if you want to talk about alcohol and nicotine, that's your business, but I'm obligated to answer you. Instead, I'll continue to address the topic of illegal drugs, which is why I joined this thread and not a thread about alcohol and nicotine.

However, with that said, I will add that I'm no fan of alcohol. Partly because my father died as a direct result of alcohol, and partly because I think getting drunk is really stupid, I don't drink alcohol of any kind. However, I still don't think alcohol is in the same ballpark as most illegal drugs and therefore see no problem with one being legal and the other illegal.

As for nicotine, I think it is absurd to associate it with any of these (alcohol or illegal drugs). I'm not convinced the studies have been entirely unbiased, and I'm certain that the dangers are being greatly exaggerated (note that I didn't say the dangers don't exist, only that they're being exaggerated). Whatever the case, people don't drive drunk with nicotine, and people don't stand on street corners selling drugs, themselves, or anything else they can, to get nicotine.

And, please, I've heard all the arguments before, including the argument that those things (selling drugs, prostitution, robbery, etc) are the result of drugs being illegal, not the drugs themselves. The facts simply don't support that argument. In countries that have tried some limited drug legalization, drug use increased, the illegal drug trade increased (dealers simply switched to other drugs or stronger version of the drugs that were legalized), crime by drug users increased, and drug related deaths increased. That is why most of those countries are now backing away from drug legalization.

Now, that is all I intend to say about alcohol and nicotine. If you wish to continue discussing these instead of the real subject (illegal drugs), than you'll have to do it on your own. I will not respond further on this.

And this is a perfect example. Both you and Glenn asked this question at about the same time, and I have tried to avoid it (I have no desire to talk about alcohol and nicotine). However, I did finally give up and answer Glenn's question about five minutes ago, so I urge you to read that message if you feel you absolutely must have an answer to your question.

A permit that allows you to have a scanner radio in your car is very easy to obtain! Providing you don't have any serious legal background issues. Simply fill out a one page application that is available by request from:

Michigan Department of State Police
Communications Division
4000 Collins Road
PO Box 30631
Lansing, MI 48909-8131

Or, if you'd prefer, I can email you a copy, in Adobe Acrobat format, upon your request. Anyone else in the group, feel free to ask!

There is no charge for this permit.

Bill Crocker

No, I believe that, in this free democracy, I have the absolute right to vote the way I personally feel when it comes to the issue of illegal drugs, and you have absolutely no right to criticize me for that simply because you want to use those drugs. I didn't say anything personal about you, my friend. So back off trying to belittle me with bullcrap like you posted above.

I have yet to see any evidence of enhanced ability to perceive, or disseminate information, in the drug users I've seen. Most have a hard time even getting shoes on their feet correctly while high on drugs and even fewer could speak well enough to clearly disseminate any information at all (including their own name).

I haven't seen an accident yet that has been traced to smoking.
Yes, there have been accidents related to falling ashes, but no more
than spilled coffee, changing radio channels, or talking.

> Or not to mention those who do it while
> they are in bed and fall asleep and burn
> the building down.

You're right, we should ban all smoking in bed. And, while we're at
it, we can add in a ban of the other causes of fire accidents in the
home - stoves, fireplaces, candles, heaters, electrical wiring, and so forth.

> Not to mention the fact it bothers the hell

if you purchase the mount new from Larson, it will come with 18
feet of RG-58 already attached. been using them for over 15
years on 100 watt commercial radios. They work with no problems.

One hint on installing it. Put some silicon grease on the screw
threads. Makes it go together easy. When it comes time to
remove it several years down the road, it will come apart. No
lubrication, have fun trying to remove it. Have even used some
"Never Seize" (TM) when I didn't have any silicon with me.

Jim.

> money is.

Easy. Mandatory tripling of sentance, and raise of one grade
(ie. class B misdimeanor becomes class A... Class A misdemeanor
becomes a class D felony, etc.), or maybe two, for any crime committed
under any psycho-active drug not taken under the supervision and/or
prescription of a physician.

That way, the emphasis becomes....if you mess with drugs, you had better
keep your behavior absolutely clean.

Drug users say "they can handle it"...so...obviously, if they demonstrate
(throuhg the commission of a crime under the influence) that they
canNOT "handle it"...then throw the book at them.

> than spilled coffee, changing radio channels, or talking.

But ahh yes, a smoker often tends to carry the cigarette in their hand while driving, thus decreasing the control they have on the car. Accidents have happend due to loss of controil, which has been attributed t osmoking.

> You're right, we should ban all smoking in bed. And, while we're at
> it, we can add in a ban of the other causes of fire accidents in the
> home - stoves, fireplaces, candles, heaters, electrical wiring, and so
forth.

Accidents occur due to faulty wiring, candles that have been knocked over etc. It is DIRECTLY related to stupidity t hat a person burns their house down because they neglected to put the cigarette down when they went to bed. It is common sense that they would not have control over it when they are asleep.

> That's alright, we look at your hateful attitude towards others with
> equal disdain.

How hateful is it that we non smokers simply don't want to be exposed to it. We are notstopping smokers from going to public places, just we would preferthey not do their drug where it will affect us. You force us to smoke when you light up.

No such problem here... I have PII 266 w/128 meg. Wacars will run continuously with no problem while surfing the net, games, word processing and everything I've tried.. Scanner is also internal Winradio, so that is always has to be running to boot.

You may want to try downloading/installing again, but it is most likely another app you have going that doesn't like the Wacars on top of it. Stop everything else before running and if this works, add them back in one at a time until you crash.

Hello,
I have a Motorola T900 two-way ReFlex pager with WebLinkWireless
(formerly PageMart), and I was wondering if anyone had any idea what
frequency pair it operates on...
My city has liscenses for PageMart on 929.6625, 929.7125, and 929.7625,
but I think those are all one-way Flex transmitters....I also found a
Flex-sounding transmitter on 940.8625, but could not find it liscensed
anywhere....
Considering that the standard 900MHz split is 39MHz, and the T900 can
only transmit 896-902MHz, I'm thinking this 940.8625 may be the
downlink, but I'm still unable to find the uplink frequency that the
T900 itself acctually transmits on.....any ideas?

> : motivated drug courier.
> :
> : Comprende?

No...it make no sense.
Our biggest interference issue right now is with "mixing" on a local Border patrol channel. The interference comes from mexico. Business on the 460 bands have begun to hire RSI to jam mexican users...RSI works much faster than hams do...and they are pros at signal detection. As far as pimple kids go. A visit from the 3 thugs from RSI is a lot scarier than a visit from the FCC.
If some hams want to get all ballsey...they should track lojacks in mexico....I hear that RSI and local bounty hunters are getting $2500 to locate stolen cars with lojack in Tijuana.......Hummmmmmmmm And all they have to do is locate them...and get a pic for the insurance co.

> We had a discussion on this within the NGs are few months ago.

Ya we did....it was a reach then...and still is.
If I was soooo concerned about rival gangs and cops grabbing my stash...I would go "low profile"..
If some i had some spotter working for me with a carload of antennas...I would prolly shoot him and burn his car just because he is such a dork thinking we operated in such a high profile mode.

I know cops that stop cars with antenna farms on them...they just wanna know who you are...the drug runner story is used just to make you feel better and more important. it's also good cover for the "stop and shop"

FYI...most runners are on prepaid and stolen cell phones. Most intel is gathered on a much higher level...One local department in texas charges runners $30 per mile...Arizona is charging $45 per mile on some rural roads.

my pcr-100 gets pretty warm. it is about 2 months old. are the little rubber boots still on the bottom. you could even extend the bottom to get some air. I find that it gets warmer when scanning, then monitoring just one channel. I don't know how hot it is actually. but it is fairly to pretty warm.

hehe. yep. us canadians are a teeny bit behind time. it seems no one wants
to buy digital phones or even the phone company to buy the digital repeater.
rumors were thru a friend that works on those repeaters is the phone company
don't want to put out 30 grand per one digital repeater unless they know
they will make their money off of it.

And having sexual thoughts is a gateway to perversion...

Have a basic understanding of addictions before you state such garbage.

Have the same respect for a citizen to use something that grows naturally in most climates.....just like you would want them to respect the your right to intercept and use any radio signals that pass thru your yard and home.

How many pot overdoses have you ever seen Dwight?

Yes, make sure you apply to the state government and receive their stamp of
approval to receive radio frequencies. Then, when they decide to confiscate
scanners, they'll know right where to find yours.

Kinda like gun "registration", ain't it?

Most pursuits that have a driver under the influence.,are booze related...1 in
7 chases involve other drugs...or undocumented workers in the San Diego area.
"Just one more beer!"

Maybe you live around too many stoners...watch your candy and chips!

You can thank the liberals for that. They have succeeded in raising the price of cigarettes to where it is now profitable to steal them for resale. Just like guns, an AKM that used to sell for $199.00 legally is now worth $800-$1000 on the black market.

These robberies weren't done by an individual because he needed a smoke. They were done to obtain mass quantities for resale on the black market. This kind of crime occurs with anything that has a large resale value - TV's, VCR's, Camcorders, etc. But with a doper, it's quite common to have them injure or kill somebody for 5 or 10 dollars just so they can do another "rock"... or a little more "dust"... or another "fix"... or a little "snort"...

Well this is a big can of worms. It is illegal to monitor and divulge what you hear from a cordless phone under the ECPA and probably under Florida Statues, however there is a statue that exempts monitoring of a radio transmissions when the participants are committing a felony, as far as I know cordless and cellular phones are not part of this exemption. The person that divulged this information could face criminal prosecution and civil torts.

Once again never divulge what you hear over the radio by private parties, because the law is on their side. If you hear employees of government agencies talking over FCC assigned government frequencies then you can divulge what you hear, however you must be careful what you disclose because you could face civil torts if you state that Joe Blow was questioned by the police about a missing child.

The best thing to do is keep what you hear over the radio to yourself and never give out any identifying information. If you hear something in a cellular or cordless phones or private land mobile frequency, never discuss it with anyone.

This scanner owners life has just changed and she will be involved in criminal and civil proceedings for the next few years. I hope those in the scanner community will learn a lesson from this woman's innocent mistake and not repeat it.

As a guide, the new 9000 MKII is going for between $400 - $450 US. Yours is
a bit older, so you may want to price accordingly. You might also want to
do an Internet search and see what other people may have theirs for sale at.

I have some "no-name" 1-1GC (as labeled) surplus telecom receivers. Odd little beasties that runon -3.75 and -12.75 (with a positive ground). With the external preamps. I have received NOAA radiosondes (what started thisi line of thought), and am trying for wierder signals. I have several GPSs units, so I am not trying to duplicate a GPS receiver in the conventional sense, just trying for the odd. The receivers have 100KC/500KC/4MC/10MC.30MC bandwidths with AM and FM detection and AF/Video/21.4MC/160Mc/ outputs. The dial calibration is "right on". Just spent the day trunning them through a commercail two way shops alignment gear.
So, the the signal is spread over 20MHz, do the "bits" hit the same spots. View the bandwidth as a hopper with discreet bins. Will the singal be evenly likley to hit any bin, or will the bits tend to fill some bins more then others. If true random then I am out of luck, but if they hit repeated discreet freqs, then I might be able to detect something. Does this make any sense?
I have the receiver, a good commercial GPS active antenna and am intrigued by the prospect of actually receiveing the un-receiveable.
Thanks for taking the time to read this, it is not a troll. MAybe a waste of time, but I am serious in this project. I ahve been interested in spread spectrum comms every since I read an article back inthe late 1950's in Popular Electronics that showed how the us military was using SS in the commercial AM (540-1600) band to experiment and no one was even aware of their tests.

Get a Radio Shack cat# 200-0006 telescoping antenna and a right angle
BNC adapter. It should work as well as can be expected for a back of
the set antenna. You could also use TV rabbit ears and adapters.

The spread spectrum modulation methods usually use a spreading code
generated by a pseudo-random sequence generator. Thus, the same
sequence is repeated at regular intervals.

In frequency hopping you could use a narrow band receiver and a
receiver buffer with exactly the same length as the repetition
sequence and integrate the received power readings from multiple
cycles and thus gradually get the signal peaks growing out of the
noise, even when the bin size is larger than the actual message.

However, the direct sequence spread spectrum is used in GPS, so this
does not work for GPS reception.

Some wireless LAN systems in the 2.45 GHz band use frequency
hopping-SS, so you could try that instead.

: /Sarcasm off

Tell that to the anti tobacco nazis that are on every college
campus. Remember there are "puritans" in the left wing of
American politics as well as the right.

The real goal is that you reject middle class morality. You are
not political correct. You are not under the control of the university
educated women of America (the new Victorians). Therefore what
you do is banned and you are banished.

>
>Resist all you want, but don't expect to have a sympathetic ear
>when you get a possession conviction

Part of "resistance" is making sure there's no
such thing as a "posession" conviction.

Arguing with the puritans won't do this. If
anything, it will only concentrate their minds
and make them put more effort into draconian
laws. Things drift more and more towards a
black and white, pro OR con, public mindset
while the middle is squeezed out.

Instead of trying to go *through* puritans you
have to go *around* them. Instead of fighting
THEM, you instead appeal to the center - those
who still realize there's a middle ground, a
grey area. Make NOT taking a side on this issue
honorable and acceptable.

Unable to cultivate the necessary degree of
fanaticism in such a public, the puritan crusade
will slowly lose force and wither away. This is
what happened to the great anti-alcohol crusade.
It wasn't so much "opposed" as it was "forgotten"

by a public which streamed more and more towards
the middle ground.

We will never be rid of them.

Some problems are not solvable.

"The poor are always with us" - so are the drunks.

> And if we legalize drugs then drug users will find other ways
> to reject society and cause problems. The real solution is to
> rid ourselves of those who have a tendency to use drugs, to

Any serious attempt to do the first of these would be pretty horrible.

Better to accept that there are a certain number of people who are
damn fools, and punish them for specific acts of foolishness or
malice.

I have a full 800 mHz coverage) Pro 34 scanner that I would like to trade for a Pro 91 or Pro 94 hand held scanner. The Pro 34 is a 200 channel hand held that covers the conventional frequencies (no milair) up to 956 mHz.

I'm looking for a trunk tracker that uses AA batteries.

The Pro 34 work well on all frequencies, receives all 800 mHz frequencies at the correct step size. Cosmetically the Pro 34 is a 7 or 8, some nicks on the front of the case but display window is clear. Includes AC adaptor, no manual but programs like other Radio Shack scanners.

Thanks,

D. Schopp

The solution is not in contraband laws...as they merely make breaking
the law profitable....but in automatic multiplication of the penalty
for any criminal offence committed under the influence of drugs.

Monster Sunspot Hurls Solar Flares Toward Earth

News/Current Events News
Source: Reuters via DailyNews.Yahoo.com
Published: 04/01/2001 Author: Reuters, Deborah Zabarenko
Posted on 04/01/2001 07:58:02 PDT by GeekDejure

WASHINGTON (Reuters) - Four solar flares and a pair of powerful magnetic
gas clouds spawned in a monster sunspot were headed for Earth and could affect power systems,
satellites and some radio transmissions, a top space weather forecaster said.

They might also provide a dazzling display of the northern lights if
they arrived at night, said Gary Heckman, senior forecaster for the U.S. Space Environment Center
in
Boulder, Colorado.

``They're headed our way,'' Heckman said in a telephone interview. ``But
these still aren't the barnburner events. ... It will tickle some power systems. Satellite operators will
notice.''

The solar flares -- explosions in the sun's atmosphere -- and the
fast-moving magnetic gas clouds, known as coronal mass ejections, were hurled at Earth from the
biggest sunspot
scientists have seen in the past decade. The sunspot was about 86,800 miles in diameter and had
about 13
times the surface area of the Earth, according to the National Science Foundation (NSF) and the
U.S.
Geological Survey (USGS). The spot is so big it can be seen unaided as long as filters are used to
protect the eyes from damage, the NSF said in a statement.

Sunspots are dark patches on the sun's surface caused by a concentration
of distorted magnetic fields. Violent solar activity is believed to be caused by the release of
magnetic energy. The first bit of stormy solar weather left the sun on Wednesday, and the first
effects of it

were expected to reach Earth late on Friday and continue through the weekend, Heckman said.

The USGS, which monitors solar weather at a network of magnetic observatories around the world, said Earth's geomagnetic field ``is expected to become quite disturbed'' by this solar activity. ``While geomagnetic storms give rise to the beautiful northern lights, they can also pose a serious threat for commercial and military satellite operators, power companies, astronauts, and they can even shorten the life of oil pipelines in Alaska by increasing pipeline corrosion,'' a USGS statement said.

Heckman said it takes about two days from the time the sun fires off flares or throws out a coronal mass ejection until its effects can be felt on Earth, when a hot ionized gas of charged solar particles hits the Earth's magnetic field, causing fluctuations in it. The big sunspot has another week to go before it rotates away from Earth, but that could be plenty of time to cause mischief, Heckman said.

``The monster sunspot's still there,'' he said on Friday afternoon. ``That region (of the sun) has been storing energy for more than 24 hours. It's just building it up, so when it's released, there is the potential for a really large event there. ... It's rather ominous just sitting there for the last 24 hours.''

An image of Thursday's coronal mass ejections can be seen online at http://www.spaceweather.com

: Arguing with the puritans won't do this. If
: anything, it will only concentrate their minds
: and make them put more effort into draconian
: laws. Things drift more and more towards a
: black and white, pro OR con, public mindset
: while the middle is squeezed out.
:
: Instead of trying to go *through* puritans you
: have to go *around* them. Instead of fighting
: THEM, you instead appeal to the center - those
: who still realize there's a middle ground, a
: grey area. Make NOT taking a side on this issue
: honorable and acceptable.
:
: Unable to cultivate the necessary degree of
: fanaticism in such a public, the puritan crusade
: will slowly lose force and wither away. This is
: what happened to the great anti-alcohol crusade.
: It wasn't so much "opposed" as it was "forgotten"
: by a public which streamed more and more towards
: the middle ground.

Except that those "moderates" are right in the middle of
the anti smoking campaigns as well as groups like MADD.

"Puritarism" is as American as apple pie. And we are now
in the middle of a neo-Victorian Age, led by moderate "yuppie"
women with college educations. Little boys can not be little
boys. No, they have to be on Ritalin. The Buster Brown suit
has been replaced by bicycle helmets. Anything male, like
violence, is banned. And drug heads like yourself are banished.

I am very close to getting one. We should all stick together so we can share things that are not spoken about in the manual, I am sure there are many.... How close do you live to strong AM broadcast bands. And does it overload between 600Khz and 1.7 Khz. The Tunable RF front end apparently only works between 1.8 Mhz and 900 Mhz. That tuned RF front end is a very nice feature.. Similar to my FT-1000 MP Mark V radio... The band scope is very nice... Have you checked out any of the VR-5000 internet web sites? I think Strogsignals has a few links to several. One person even has a demo with the DSP feature. Did you get DSP or Voice Recorder.. And last may I ask who you purchased it from, if new what $$$ was it? I think a good deal is around $850.00???

>sense?

No, not really. You seem to be talking about frequency-hopping spread
spectrum, where a narrow-band transmitter rapidly hops from one frequency
to another, and a receiver tuned to one of those frequencies might hear
periodic "blips" of the carrier as it hops to that frequency.

That's not how direct-sequence spread spectrum (what GPS uses) is generated.
Effectively, the carrier is modulated by white noise with a 10 MHz bandwidth.
With both sidebands transmitted, that's a 20 MHz bandwidth total, and all
of it is used all the time by the signal. A narrow-band receiver tuned
within that bandwidth will never hear anything but white noise - and the
signal level in that narrow bandwidth is below the natural noise level,
so the signal isn't even detectable *as* noise. A simple wide-band
receiver will also hear nothing but noise.

The only way to detect the signal is to grab the whole bandwidth and
multiply the signal by an exact copy of the noise used by the transmitter.
If this copy of the noise is exactly aligned with the original noise
in time, then the modulation process is reversed and you get a signal
in the receiver. But if you have the wrong noise, or if you get the
alignment wrong, you get nothing - and there isn't even any way to tell
whether there's no signal at all, or whether you just got the receiver
parameters wrong.

>I have the receiver, a good commercial GPS active antenna and am intrigued by
>the prospect of actually receiveing the un-receiveable.

The pseudo-random sequences used to generate the "noise" in the transmitter
are public for the "civilian" C/A code. You could in theory build your
own correlator to receive those satellites. But you are going to have
to build some hardware (or use an existing GPS chipset); no normal
narrowband communications receiver will work.

>boots still on the bottom. you could even extend the bottom to get some air.
>I find that it gets warmer when scanning, then monitoring just one channel.
>I don't know how hot it is actually. but it is fairly to pretty warm.
>
>Dev
>

I have found 2 ways to aid cooling to the PCR-100. Anyway I do not know whether these 2 ideas are practical or do harm to the unit in the long run.

1. When operating the PCR-100, place the unit topsy-turvy on the table. By doing this you aid cooling since the hot metal side will get more fresh air.

2. Unscrew and take off the black plastic cover. By doing this the hot air can escape and more fresh air will come in to aid cooling.

What I meant by hot is that it is hot to the touch. You can only touch the hot metal side for a few seconds without feeling pain. It is that hot.

empathy.

It would be great for the fastest growing industries in the
country - the "prison system" - the "criminal justice system"
and - lawyers.

Besides further hardening the public arteries toward crime,
all that this would do is increase the street price and give
LEO/prosecutors/politicians more "tools" to railroad
whomever they want.

Just plant a little dope, claim or stage some criminal
behavior and presto, opposition is gone forever, legally.

Why not just take the next logical step and "authorize"
on-the-spot execution of anyone suspected of any crime.

And to think that hemp was once a legitimate and useful crop and that addicts could steal peaceably across the tracks and lay quietly for days in their fantasy haze.

Will your radio receive AM mode? If so, 131.200 (Alaska Airlines) and
132.000 (Horizon Air) are in use throughout the state, as far south as Portland
and over into Montana for air to ground communications and can make for some
interesting listening.

Thanks for taking the time to correc my confussion.
While I will try a lot of things, this is beyond the reach of a casual
experimenter. I will just use my commercial GPS units and be happy that the
magic works.
If I ever get really curious I will snag a single board OEM GPS and probe
around it it.

I have the tools to work with SMC and, from what you have said, I might be
able to learn something with that approach.
Again thanks for the information. I will never look at my GPS in the same way.
It is magic!

Take a look at www.pro-92.com for vendors of the GRE software and
interface cable. Plus a good detailed description of it.

I noticed that the used pro 2006s are pretty high in price.

What are these so good for, considering they don't have trunking capabilities?

I mean for the little bit of exta money, why would'nt I get the new 780 from uniden?

I want to have a very good discriminator output and most likely will just be using it to browse the mdt's in my area.

I also would'nt mind getting the cell frequencies either. I know that the 2006 is capable of getting cell.

Is there any other scanners that might do the trick for me? I am always open to suggestions and would like to save as much money on this as possible. Thanks

-Matt

Hi

I am currently having two problems with this scanner.

I cannot access the s- bit to see if it is on or off. (holding down scan
button)
Second I cannot access the id's numbers when in truck mode.(No dashes) -- ---

I have the manual, but nothing but double talk.

I need to monitor Motorola system type II 800mhz.
I also need to monitor in the ID of 56176.

Can someone help me here. Radio Shack had no idea at all.

Thanks Vinnie

I have owned a few of these radios and they all have the same problem. I am not sure how to explain it but I forget what the name of the problem was. I know that the old yaesu ft-530 had the same problem when you turned the UHF volume up the same amount of the VHF volume. Anyways.

I have this problem only when I turn up the volume a bit more then half. it sounds like some sort of intermod. it sorta whines when it is turned up. If you hit the radio. I don't mean beating it. it goes away. People might say it is a bad connection somewhere. But I have checked everywhere. All 3 that I have owned have had this problem. Someone with the pro-2045 may have had the same problem. if anyone knows how to help to fix it. I will try it. Thanks

Dev

jon: that looks like a nice unit, but i have one concern...

although it is listed as being for both NiCd and NiMH batteries, there does not appear to be anyway to stop charging except for the voltage sensing used for nicads. NiMH batteries do not have the same characteristic and could be overcharged or cooked if the charger does not shut off properly...

suggest we both investigate further... there is a suggestion in a previous reply about checking in the model plane newsgroups... good idea..

>Anyone have a VR-5000. What do you think?
>

Dentul,,, Robert...
I bought one about 6 weeks ago and I couldn't agree with you both any more if I tried..... The manual is a damned joke isn't it? We must stick together and share the operating procedures of this modern wonder of radio technology..... I am sure we all benefit from our mutual exchanges, I know I will....
Don't get me wrong either - I am full of constructive criticisms on this receiver but I do like it. Would you agree with me that it is probably the neatest, meanest looking scanner/receiver around (I think it is)?

I can't delete any memory channels either or change memory banks. I can't even create 'banks" of memories yet, say 50 banks of 40 mems or 20 banks of 100 mems. There are 2 existing default banks waiting for memory channels to be entered in them but don't ask how to create more. I wish I could. I don't fancy having up to 2000 memories in the one bank, a bit of an overkill isn't it? I mean, just imagine getting from mem 001 to 1000. Yet, looking at the LCD display and moving my face from side to side, I can just make out that there "isn't" a place for a third or fourth numeral for the memory channel numbers, there are only 2 places which suggests that channels can only go from 00 up to 99 => then what? How do you enter into memory channel number 100+ or 1000+? I don't see that one in the manual anywhere...
I thought the Up & Down arrow keys just below and to the left of the main tuning knob were used to change from one bank to another. I haven't tried yet because until I can actually create more of these banks, I can't change to/from them.
I think you can only "mask" a memory channel at this stage, by the book that is,, but masking and deleting are 2 different things.
I have emailed Yaesu for any help on the manual and its shortcomings but have received no reply.

It is a good receiver once you have set it up but that menu system is a bit annoying and yet it looks as if it can do way, way more than either the manual or the programming procedures suggest.

I will keep my eyes open for your guys AND if you have any problems or questions, don't hesitate to ask - I will ask you guys if I have any problems....
Cheers......

1850. Seattle, WA park rangers?

Newsgroup: rec.radio.scanner

Message-ID: <20010403003450.28994.00001197@ng-mr1.aol.com>
Source record: 67488

Okay, odd one here...I came across a patch on Ebay for "Seattle Park Ranger-Law Enforcement" which I have never heard of. A check of the old phone book reveals a listing for the Security office of the Seattle Parks and Rec Dept. Now, the only security I've ever seen in a Seattle Park was when a private guard (possibly NW Protective?) hassled me and some friends late one night back in high-school...So my question is who are the park rangers, and what do they use for comms?

Thanks,

Brett

1851. Need help, RS Pro-51 doesn't hold channel memory

For years I have run the Pro-51 in my vehicle through keyed power, without any AA batteries in it, and never lost programmed channels until recently. Now the scanner having problems keeping it's memory even for a short while. Whatever inside this unit keeps the memory fresh has apparently been depleted.

Please help identify what part(s) need to be replaced. Radio Shack tells me there is no lithium battery in it. There is a component in it that looks like a battery, only it has markings like a capacitor (ELNA 9340, 5.5v, .047f). Does anybody know what is wrong with this unit?

Thanks in advance,
Don Allen

The problem may be with the external power connector on the radio. My PRO-51 is very sensitive to any interuption of power while it is scanning. I gave up using external power and just run the radio on NiMH rechargables. Even plugging in the charger while the radio is on can cause loss of memory. It seems to only mess up banks that are actually being scanned at the time of the power glitch. I don't have a fix for the problem.

put some aa batteries in it for when you use the car adapter not in the charging plug. most uniden made. or rs scanners and ham radios lose their memory when the battery state or charged state of the capacitors deplete. or try keeping your radio in a constant + volt state.

It has nothing to do with the radios. The old analog radios (Motorola MX-350) are not set up to reach the dispatch frequency either. Whether this is by decision or design (they had only 7 channels available) I am not sure.

But, knowing the city as I do, one can assume that when the new radios were programmed they decided to keep the same scheme; only chief officer's radios can go to the dispatch channel.

On the other hand, why would any fire fighter on the fire ground need to call the dispatcher at all? That would be breaking the chain of command.

Hi Dorothy,

> Thanks for your help. I think I live in a black hole for scanner
> frequencies here. I've search every resource I know. Have come up
> with some freqs, but they seem dead.

First of all, Rich's pointers toward CARMA are an excellent source
of frequency information for all of the Chicago area. Those guys
run quite a frequency cooperative :-)

You may have guessed that St. Charles is part of the Tri-Comm dispatch
system. There may be other frequencies in common with Geneva and
Batavia as well. Police and Fire for your area are handled by the
Tri-Comm system.

Other frequencies (besides Tri-Comm) off the top of my head include:

Kane County Sheriff 159.150

Kane County Office of Emergency Management 158.475
(also used as a local gov't channel during business hours but it
becomes very active when severe weather is in the area.) The
emergency management units are numbered 91xx.

IREACH (interagency police) 155.055

ESMARN (interagency emergency management) 155.025
(becomes active during severe weather)

District 2 State Police Elgin (ISPERN) 155.745

SKYWARN weather spotters 145.470
(But its a regular ham repeater during quiet weather)

You can find various local fire departments at 154.070 and 154.385

Hope this adds a few frequencies to your list,
--

Not familiar with that model; but if it is Cellular Able then it is illegal to
import it.
Not to say people dont do it quite often as with other illegal things, but
there is always a risk.

As for duty, I have got packages from overseas without any Duty; there are
different regulations on this, visit the US Customs Site and see "Know Before
You Go" Section there for full details from the Horses Website, and/or ask
Javitation; good reputation and feedback from what I have seen.

On a side note, I heard a Customs Inspector say once:
" A career Sumggler has to be lucky every time, we only have to get lucky once"

Hope this helps.

Many people have problems with Wacars and SB Life (include my person).
Have changed decoding to a machine with SB 128 pci and it works great.
With my SB Life the machine crashes after about 5 or 10 minutes......seems
to be a problem with soundcard driver. (in my case lifeware 3.0)

So long

Uh...because the fireground channel was tied up with traffic...when the roof collapsed inside...(just a scenario)
I'm well aware how the old system was setup...limited channels on the handhelds.
But now you have the availability of up to 255 channels in each handheld...or did FDNY only buy 8 channel radios again?
I have no problem breaking the chain of command during an emergency.
But it really sounds like a lame excuse for more poor planning, when you look at how modern fire radios systems are designed now.
Honestly...when you look at how the FDNY system is designed...it's ass backwards by today's modern standards.
But no biggie....I'm sure they never asked a dispatcher or FF for a little input.

I just have a big problem understanding why FDNY would not ask for inter-operatability among the troops radios.
"......that would be breaking the chain of command....."
Okaaaaaaaay!

Hmmm - Well you see, the trouble is that I live in New Zealand. I emailed one of the customer support (or was it "sales" ?) at www.yaesu.com or thereabouts, ohhhh it must have been about 4 - 5 weeks ago now. Still no reply..... I will go check again for another email address.....
Can you find/give me an exact email address. I don't particularly care what country it's in as we don't really have a genuine Yaesu dealership here. We have a type of franchise holder for the brand but he/they only deal in importing and selling the gear, along with the many other brands in their shop. They seem to be sure that the manual is adequate, at least for their shop floor model.

Having owned this set for the past 6 weeks now, I am really getting to like it. For some reason, all it's shortcomings seem to be fading into obscurity and all the good points are getting better, in my eyes. The menu thingy is still an impending danger area though, hahahahaha...

Thanks for going out of your way..... much appreciated.

Looks as though you have it set up correctly, it may be that the trunked system has its own set of problems. I know my own reception here varies fromday to day. I have also heard here, and from other sources, that between sunspot activity, and the increasing proliferation of cell towers, the trunked systems seem to be taking quite a beating. This probably doesn't help, but more or less of an FYI.

I don't know WHO they are (maybe a special cadre created for "close
personal friends" of Norm Rice and Norm Stamper?), but I'd bet theat they are one
of the talkgroups on the City of Seattle trunked system.

Big Ron:

1. I have a 95 SHO and it has a tendency to be a real PITA regarding birdies. Not all over the spectrum but especially VHF where I like to listen to FD's. I LOVE my SHO, but it's like a beauty queen that doesn't know how to hold a fork.

2. Keep in mind the viewing perspective of the display. My BC760 is situated between the driver's seat and the center console and I can BARELY read the display.

3. I almost bought a Sable because the available space was almost line of sight to the radio's display.

Best regards from Chicago.

Bruce, I just use the email address given on the Yaesu USA web page.
That has worked for me in the past. I did not call them today, just been
busy!! Soon I hope. I will be at HRO in San Diego and ask them about
this issue!!

Cheers Rob,,,
First time up I emailed this address - customerservice@yaesuusa.com and got no reply - this was about a month ago..
but today I re-emailed this address - amateurtech@yaesuusa.com . Here's hoping that I get a reply....
I donwload the online HRO catalogs whenever they come out. Boy, I wish we had an HRO over here.... I would set up camp in the store and never leave. Hahahahaha...

1893. Scanners for sale

Newsgroup: rec.radio.scanner
Date: 2001-04-04 15:22:59 UTC
From: Ed <edfox25@mediaone.net>
Message-ID: <n%Gy6.33383$Wz.9215415@typhoon.ne.mediaone.net>
Source record: 67431

I have several scanners that I am looking to sell.

Radio Shack PRO-2066. 150 Channel Trunk Tracker.

Still have box and mounting bracket. A little over 1 year old in very good condition. $100.

Uniden BC-890 XLT 200 Channel w/ PL board and AC power supply.About 10 years old always kept in the house. $75.00

Radio Shack PRO-2067. 500 Channel Multi Trunking scanner. This scanner has alpha numeric display and also does PL and DPL. Trunkk modes are Motorola Types I & II. EDACS and LTR. The radio is programmable off the front panel. I believe that there is software available through Radio Shack or can be cloned from another same model scanner. I still have the manual somewhere. The radio is less then a year old. The bottom is scratched from an in dash mount. Radio works well. $200 or best offer.

I have recently bought a 780XLT and a Vertex 800 Portable so I no longer use all of these radios.

I will accept money orders only. If we agree on a sale I will ship the scanner as soon as I get the money order.

If interested please let me know. edfox25@mediaone.net

1894. CARMA Meeting April 7

Newsgroup: rec.radio.scanner
Date: 2001-04-04 16:04:31 UTC

This is a reminder of the upcoming CARMA General Meeting on:

Saturday April 7th, 2001
11:30 AM for Lunch, 1:00 PM for the meeting start

at

Phillies Pizza,
63rd & Kingery Hwy (IL-83)
Willowbrook IL.

From I-55 go north on Kingery Hwy (IL-83) to 63rd St., and turn west. At the next traffic signal turn left into the Dominick's shopping center. Phillies is at the far west end of the center.

From I-294 North get off at Ogden Av. (US-34) and head west to IL-83. Go South to 63rd St., and turn right (west) to the next signal and into the shopping center.

See the map and details at http://www.theramp.net/shabec/carma.htm.

Other important dates to remember:

May 4, 2001 Friday Nighter, Woodridge CRC
Jun 2, 2001 Regular CARMA Meeting, Location to be determined
Jun 23, 2001 Annual CARMA Picnic, Shoe Factory Woods, Hoffman Estates
Jul 6, 2001 Friday Nighter (Tentative Date)
Aug 4, 2001 Regular CARMA Meeting
Sep 7, 2001 Friday Nighter (Tentative Date)
Oct 6, 2001 Regular CARMA Meeting
Nov 2, 2001 Friday Nighter (Tentative Date)
Dec 8, 2001 Regular CARMA Meeting

All are welcome at all events. CARMA has no dues or other fees except the restaurants we meet at require each attending to purchase a meal.

Please come and enjoy the company and discussion.

I have checked with 10 suppliers, there are no BC-780XLT scanners in the USA for sale at this time.. All of the suppliers I checked with told me there would be more coming sometime in April 2001.

If you know of one that has a supply in the USA, post it here for all to know.

Happy scanning.

Building a scanner is going to be a somewhat daunting task, my friend.
Suggest getting a less expensive scanner to get your feet wet. Build a
scanner, from scratch ? Quite a job, to say the least.....

1900. What scanner to purchase?

Newsgroup: rec.radio.scanner
Date: 2001-04-04 23:24:51 UTC
From: Mike <michaelthalman@sprintmail.com>
Message-ID: <73Oy6.1727$Kr1.222302@newsread1.prod.itd.earthlink.net>
Source record: 67438

I'm looking for a wideband handheld scanner and thought maybe someone out there would maybe help me out on the decision process.
First, I will purchase it here in the States, I'm not willing to risk the small chance that customs may intercept a scanner purchased overseas. (Unless the fine is small).
I really like the AOR 8200II, it seems to have the most to offer, but it's also demands a premium price. But there are other models out there for example the Icom R10, Alinco DJX-10 that cover a wide range of frequencies, and are priced about $200 less than the AOR. What would I be missing out on with these models vs. the AOR 8200II.
Any input with suggestions, and experience with the above models would be much appreciated.

Thanks

I connected an external speaker and it sits about 20 inches away from the radio. I've never experienced the problem you speak of but due to the bad quality of the internal speaker I've always used the external.

There is a shelve full here in MA at You Do It Electronics. Last time I checked they where priced on sale at 350.00 .
http://www.youdoitelectronics.com

There are thousands of stores stocking 780's nationwide there is no way you can make that claim! I have two and have bought two for friends with no problem locating them.

It works as per specs and without any problems. However, the strong amplification of RF signal can cause overload at the RX but there is a small screw at the connection box to attenuate the signal, if necessary. Mechanically, it's very solid built. Mine has been sitting on the roof in heat and cold (including extremely heavy thunderstorms that fried some other equipment) for several years with no mechanical or electrical problems developing over the time. It comes with all sorts of cables and stainless screws to connect to a vertical post, - very handy.

The problems are not specific to the ARA: As an omnidirectional device, it amplifies all signals, i.e. the S/N ratio is (of course) worse than that of a directional antenna looking towards a transmitter station. Still, it does NOT pick-up noise from nearby power lines, car ignition, etc.

If you are looking for an omnidirectional antenna for scanning (FM, VHF, UHF up to handphone freq and higher), in particular if you are stuck inside a big building, the ARA is a great piece of equiment for this purpose.
If you need to pick-up TV stations or other stationary sources, a directional device may be a better option.

Well hell, you did have to put that in here too,,,
Do you want to listen to cell or not?
It is illegal, you must want to pretty badly to mention it in here....
If that is what you want, why do you even consider the NEW scanners that
can't?
Don't come here later and ask how do I get cell on my new scanner! You
can't! It will never happen! Ask a million times and you will not find out
how to do it.

Or do you mean, "do I want to listen to cell or have a new scanner with lots
of new features?"
I can't make that decision for you.

Well you may have other places to buy electronic parts, but I'll bet that they are not open till 9 pm and on Sundays!! Ha Ha! Tandy wins again! Which is when I always need parts cause I am a working man!
Tandy rules, even if they have a cat running the register, cause I don't need an electronics engineer to help me find my parts anyhow! I can find them myself! Don't expect them to sell you a 25 cent part and have a professional engineer there to answer your questions for 20 minutes cause your dead ass was on the sofa when he was in college. Smell the coffee and be glad for the computer your mama lets you use!

yeah and if you need a manual in 5 years I'll bet Radio Shack will have it on their excellent website for free, but broke dick uniden has about 3 on their website, course you can order them for about 3 times the cost that Radio shack gets, uniden manuals suck anyhow! But what do I know, I only have about 20 scanners!

1926. help needed,,,

Newsgroup: rec.radio.scanner
Date: 2001-04-05 20:16:01 UTC
From: twano <patwano@yahoo.com>
Message-ID: <5o4z6.868$Zg.444271@news1.epix.net>
Source record: 67365

My old, but up to now reliable, Regency TS1 scanner needs help. It will work fine for a day or two, then stops receiving. If I turn it off for a day, it will work for about a day. It scans, but nothing gets received. This just started about a week ago.

Any ideas on fixes?? If you tell me what to check, I can repair it if the parts
or their equivalent are available.
TIA

John I tried to call and place an order but they don't answer the phone.

As for the other stores mentioned in this thread, they are sold out.

1928. Orange County, CA lawnet

Newsgroup: rec.radio.scanner
Date: 2001-04-05 20:41:00 UTC
From: Dynwolf <dynwolf@pacbell.net>
Message-ID: <3ACCD85C.5030009@pacbell.net>
Source record: 67367

Does anyone have any further information on Orange County's new digital system? I have managed to find the system ID, the frequencies (I think) and the type of hardware - (Astro Sabers I believe.)

What I need to know are unit and talkgroup ID's.

Also, I'm under the impression that this is a Type IIi Smartnet system, but is that correct?

If you have any information, I'd appreciate it if you could e-mail it to me at this address. Posting to the board would be ok, but it could take me a while to find it unless I get in the habit of checking daily!

Thanks in advance for your help!

Jay

Well, Pappy, I just called the store for you in Lodi, NJ. They have them in stock, so I don't know what you mean by "all sold out". I can hop in my car and pick one up in a half hour. Check up in the thread where I originally responded to your question, and I believe you said you were in Edgewater - not all that far from there.

Hi from andy. The only really BIG fault with the PRO-94 applies to the trunktrack mode...namly the Motorola (MOT) mode. The fault is that unless you`ve had the thing upgraded to the next firmware level (I think it`s version 3.28), the scanner will have trouble tracking Motorola systems in the trunktracking mode. In my case, it couldn`t even track `em at all. However, the problem`s not that hard to fix...if the thing`s still under warranty, (and some are), it costs nothing, if not, then it costs just the labor. In my case, this was about $50. Hope this helps, and good scanning.

$375 CDN
It is a BC245XLT Trunk Tracker II Handheld scanner. Tracks Motorola and
EDACS Trunking systems
Memory 300 channels. NICAD Battery pack and charger
Frequency coverage:
29.0- 29.7MHz
29.7-50.0MHz
50.0-54.0MHz
108-137MHz
137-144MHz
144-148MHz
148-174MHz
406-420MHz
420-450MHz
450-470MHz
470-512MHz
806-956MHz

Email me for details.
*All accessories included

related ?

Whats the difference between the prot 92 and 94 ?

Can they both monitor the same trunked systems? and would the pro94
with new firmware be a good deal at $200.00 ?

thanks

I have been filling orders as the 780's been trickling in. I should have another shipment within a week. If you want to be put on the list you should place your order. Your credit card will not be charged until I ship.

My price for the 780's is $350.00 not including shipping.

Are you sure you talking about the PRO-94, not the PRO-92 with the firmware updates....I had a PRO-92, and I took it back because of the problems you are describing, and www.pro92.com has that exact problem, including the firmware number for the PRO-92, but if your sure that the PRO-94 has the same fault, then back it goes too. I only have the Motorola systems near me, and I really need something reliable to listen to them. Thanks for your post.

check out www.pro-92.com they have all the information need to make a decision on the pro-92. I loved it when it worked. They do both track the same systems, the PRO-92 has alpha tagging, which is a HUGE benefit. However, it has problems with motorola trunking systems. The PRO-94 I programmed for a friend was a good scanner, it trunked well, and I hope it does not exhibit the same problems as my PRO-92 did. Hope this helps.

1946. Leaches - Bearcat Radio Club and Hobby Radio Stop

Newsgroup: rec.radio.scanner
Date: 2001-04-06 04:49:48 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <JVbz6.2962$be.34630@news1.atl>
Source record: 67385

The TrunkTracker Talkgroup IDs for Louisiana and Baton Rouge
were pilfered from my site. I know this because they shamelessly
used my info with no attempts to change the information. The IDs
were acquired by listening to scanners and submissions to my site.
They even listed my early mistakes in identifying IDs. Many hours
of work have gone into my site and the only reason I ask for
credit is to generate interest in my site which will ultimately
benefit those in the Baton Rouge area.

On my site I have given credit for submissions to those who wanted
credit. The Bearcat site does not do this even though I have e-mailed
them simply asking for credit. My messages were ignored.

While I invest time into my web page (free of charge), I believe it is
only fair to give credit where credit is due. I have considered going
back to my pre-web days of keeping the information to myself.

Sorry for the rant, but this is one of my pet peeves.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

I purchased 2 ARA-2000s about 1 1/2 yrs ago and ran gain tests compared to a radio shack discone. It is not a very impressive antenna, especially for the price. I don't have the data near me but I remember the RS discone with its 50mhz whip was much better in the 25 to 50mhz range. After about 100mhz the Dressler picked up and surpassed the discone somewhat but still not very impressive. We used a 30 to 200mhz Bicone and 100 to 1000mhz Log Periodic as the source antennas and an H.P Network Analyzer for the tests. The antenna element hidden inside the Dressler radome must not be very effective. I believe you would have a much better antenna it you start with the discone and add Dresslers separate pre-amp, but that would cost quite a bit. All this fuss I went through was to find a replacement for a great active ant which was hit by lightning. The ant was similar in appearance to the Dressler but had a very efficient fat dipole thingee inside and a pretty good pre-amp that did not have any bad overload symptoms. The antenna was designed by a Michael Werner from New Jersey and if I could locate him I would try to get more of these excellent antennas. If anyone knows Mr. Werner, please let me know!

I thought I read somewhere about an update to the pro94..... maybe
I was wrong.....

I've been reading and looking around on the web about some of the
"trunk" portable scanners.

So far I've not come up with much info for the 94.....

1949. Scanner Software outdated, what do you think?

Newsgroup: rec.radio.scanner

Hi,

I have an AOR 8000 and is it just me or does most of the scanner related software out there seem kinda lame? I mean most of it is either buggy as hell, hasn't been updated in years, uses an interface from hell and/or is overpriced. Also, how come there is so little innovation on the part of manufacturers / programmers. Just look at other consumer/ computer products out there, you never see a 486DX on eBay selling for more than a new 1Ghz+ model.

I just want to get others opinions on this so please turn the flame-throwers off. I enjoy toying with my AOR and will probably add a 780 soon but seems to me there needs to be an influx of fresh ideas.

I am well aware that I can get one in the US for less, but here in Canada
they retail for $499. If anyone know where I can get one in Canada for $399
as was suggested below I would be more than happy to lower my asking price.

1953. FEEDBACK on the Yaesu VR-5000!!

Newsgroup: rec.radio.scanner
Date: 2001-04-06 14:33:16 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <3ACDD3B6.4319C1EF@home.com>
Source record: 67392
Cross-posted to: rec.radio.shortwave,rec.radio.scanner

I just got mine on Thursday with all the options. I have several TOP END radios to compare it to and so far so good. My test so far has been 100% below 30 MHZ. I have been doing a few test by taking the 10.7 MHZ IF output and feeding that into a JRC NRD-545 radio and using the AM synchronous detector circuit on SWL stations. Works very good. I also tuned in a few FM radio stations, and was able to tune the SCA sub carrier information with the IF output hooked to the 545 radio. I have a SM-220 station monitor that is factory stock at 8.8 MHZ input for IF. Made for Kenwood radios. Since I have Yaesu HF radios for the HAM side, and they don't offer IF outputs (most HF radios today do not???) I will re-tune the SM-220 to 10.7 mhz and use it for some band scope functions. OK, you may ask why since the VR-5000 has a VERY NICE band scope. It does but only when the radio is in the single receive mode. When it is in the DUAL BAND watch mode, the second receiver is used for monitoring the second station , and not as a sweep tuner for the band scope. The Memory functions are NEAT. Some of the best functions I have ever seen on a scanner. I called Yaesu on Thursday and they are printing a NEW owners manual as we speak because many folks just can't figure it all out. Also MANY hidden features that are not mentioned. Like the ability to SEARCh for a station, or watch for activity on a seldom used channel, automatic activation of the Digital Voice Recorder, recording the audio and storing it in memory for playback at a latter time, VERY NEAT!!!!
I will try and answer any and ALL email from the community about this radio. Don't let complexity get in the way of sophistication. It will take time to get use to it. The FRONT end of this radio is VERY HOT!!! THe 20 DB attenuator is very handy, HOWEVER, I think even more attenuation may be needed at times for strong utility stations. This HOT front end lets it work great on just a small whip antenna attached to the back. Using a 100 foot long wire antenna on AM broadcast can overwhelm the radio. In many cases SWL station are FULL scale on the s-meter. This is GREAT NEWS!! The reason is it gives the BAND SCOPE great vertical resolution. Showing not only the strong stations, but the weaker ones as well. The dynamic range of this scope is wonderful, far superior to the band scope used in the ICOM 756-PRO HF radio, costing $2700.00,, More to follow...

I have a beautiful, like new condition RELM HS-200 hand held scanner for sale. This one is very sensitive, a great performer and was made for RELM by Yupiteru. Does PL and DPL tones as well. Also includes the custom vinyal case ($25.00) and four (4) MAHA 1550 mAH NMH batteries ($12.00).

$100.00 plus $6.00 shipping to USA only, via USPS Priority Mail, insured.

No COD or Trades!

I will accept a US Postal money order or PAYPAL only, NO CHECKS!

E-mail if interested.

Dan

I've got "PROBE" from Datafile, Inc and have had it for the last 5
years. Its great- FAST, updated every year and good support from its
author Perry Joseph.. He's even at dayton every year for the hanfest
and can be found at the Opto booth. Interfaces with the Opto products
and lots of the Radio Shack products along with others. If you want
FAST this is the one. Runs under both DOS and Windows.
Can be contacted at DATAFILES@AOL.COM last I checked.

You wish to trade a $1,400 receiver for a $350 scanner. Hmmmmmmmm

Should I send my Alinco to Sweden first? Hmmmmmmmmm

I was born at night but not last night.

How about a Volvo thrown in too?

Not very likely! You would have to have a 2000 foot tower and even then you would hear every other agency licensed to the frequency you were trying to monitor. And of coarse you would only be able to hear states surrounding your own.

Depending on conditions, it is easy to monitor out of state frequencies. We are in a period of high solar activity and for the next couple of years "skip" conditions will allow frequencies of 30 to 40 MHz to be heard 1000s of mile away. Bets time to listen is mid morning to mid or late afternoon. An outside antenna should help..

Good luck

Tom

1968. Frequency counter Question?

Newsgroup: rec.radio.scanner

I have an old Optoelectronics Model 3300 freq counter. I can't locate the manual
for it. Are these models prone to overload? I live in a large city. Unless I put the counter in a hold mode I get a lot of random numbers.
Thanks,
Mike

total bullshit.....if someone is that bad off from a few hits
of grass, then they've got other problems to begin with and
smoking a joint isn't the root cause you and others seem to
think it is.

Want to do society a favor ? - outlaw cigarette smoking ! and
alcohol, all KNOWN and PROVEN killers (alcohol causing birth
defects in pregnant mothers, fatalities from DWI's, smoking
causing lung cancer, etc, etc)...

Someone doing a bong, is pretty mellow and harmless to
themselves and others. Not obnoxious a-holes like the
drunken animals at football games rioting and fighting.

"junkies" my ass ! are you from the Joe Friday school of
prejudicial views ? this so called 'war on drugs' is a
huge waste of tax dollars the way prohibition was back
in the early part of the century.....

legalize it, regulate it, tax it ! solve all your problems
right there....

I asked an earlier question about amplified speakers and was pointed towards Motorola speakers. I see that they come with several wires; one I saw had 7 wires. I can't seem to figure out why it would need so many wires. I can see having 2 wires for power and 2 for audio, but that makes 4... what do the other 3 do? Also, they usually come with some type of connector on the end. Is there a pin-out diagram to tell you what each one does and is it difficult to get the mating connector to make it easier to plug in and unplug, should there be a need to change speakers (although I don't really know why)?

I'm here in Boise, Idaho and listen to 33.xxx low band FD freqs from Maryland,
PA and OH.
Loud and clear even the apparatus enroute and fireground comms. Of course most
of these mobiles are 100 watts and base stations 500 watts. Great fun.

Sorry to hear about that.
We had a similar thing happen up here in Minnesota. Our Scanner Club had very detailed frequency lists that had hundreds of hours worth of listening and confirming information in them. Then we'd have some people who'd join the group, take all the info. that we had (while they didn't contribute a thing), then never show up again for a meeting.
Next thing we'd know, its all on a website with their name listed on all of our information and hard/dedicated work...The person even went so far to remove/white out our names and put in their own!!!
Then they had the gall to tell "us", that it was public information and we had no right to it!!!
Shortly there-after we closed the group and never gave out any more scanner frequency lists ever again. Now its kind of funny to see these same people post messages on the internest scanner forums asking for scanner frequencies for Minnesota. Hmmmm, I thought it was Public Information and easy to get?
lol

Sure, depending where you are. I'm in Sussex County, NJ - close to NY State and PA and, at a 1300' elevation, I have to employ PL codes to filter out that in which I'm not interested. If no PL codes are appropriate, I've got lots of stuff to sift out on certain freqs.

The problem is that for free domains the majority of free Web Service
providers are changing to pop up ads like netfirms.com has to try and keep
revenue coming in.
As far as the $9.95 domain deals you are licensing the domain from the
domain providers and they hold all rights to the use of the domain. So this
is not a solution I choose to participate in.

Does anyone know if it's possible to modify a Uniden BC200XLT scanner so the light stays on?

I seem to recall such a mod but can't find any reference.

Thanks

Kevin

1991. Help with SBE-12SM Optiscan Monitoring Receiver

I am trying to find out how to program the card that
came with an SBE-12SM 10 Channel Scanning Receiver
made by Opti-Scan.

You can see the programming card at:

http://members.home.net/gary-jacek/Optiscan.htm

I would normally search Dejanews first, but its
not the engine it used to be.

Any assistance appreciated.

OK dud so stop crying and wasting your time and money on phone calls and just pay the extra $20.00 and get the damn scanner now!!!! I mean you said no one has it in the whole US, the guy tells you where to get it and now your bitching cause it's $20.00 too much. If $20.00 means so much to you then you probably should not be spending your money on a $300+ scanner.

A reading comprehension problem, Harry? He was talking about those who use cannabis "daily," not "a few hits of grass" or "a joint."

> Want to do society a favor ? - outlaw cigarette
> smoking ! and alcohol, all KNOWN and PROVEN killers
> (alcohol causing birth defects in pregnant mothers,
> fatalities from DWI's, smoking causing lung cancer,
> etc, etc)...

Okay, but what does that have to do with drugs (getting the topic back to drugs in general, not just cannabis)? What I see above is an argument for making alcohol and cigarettes illegal (an argument I don't agree with, by the way), not a valid argument for making drugs legal. Contrary to popular propaganda, most people who use cigarettes or alcohol will experience no bad side effects (that's right - most smokers die from old age, not cancer, or whatever). The negative effects of drugs, on the other hand, are immediate and wide-spread (crime, overdoses, etc). And, by the way, much of that crime would still exist if drugs were legal (the addicted drug user would still need money to support his/her habit).

> [snip] this so called 'war on drugs' is a huge waste
> of tax dollars the way prohibition was back in the
> early part of the century..... [snip]

And in the years since prohibition, alcohol abuse (not normal use - abuse) has climbed to almost staggering levels. And there is absolutely no reason to believe that drug abuse will not do the exact same thing. And, when you consider the number who die today from drug

abuse, this country can ill afford a massive increase in the number of people abusing drugs.

I found it here about the old & new versions of the PRO 94, the new version has PRO 94A on the back panel. Had to take the belt thingie off to see it, mine is a 94A.

Only trouble I have with mine is that at times I seem to hit certain 'holes' in the coverage, where the 800mhz doesn't seem to get through. I have heard recently, here and elsewhere, that that may be due to the proliferation of cell towers. I have confrimed visually that there are at least three within a quarter mile of one of those holes. over by my work.

Other than that, I use it almost daily, at home and on the road.

You need the manual for the scanner which includes the programming codes for the punch card. You also need to know what frequency coverage the scanner is setup for. VHF hi band standard was 150-170 but some were setup for 140-160.

Has anyone had any experience with the Stridsberg Multi-Couplers? In particular, the difference between the active and passive versions (MCA 204A & MCA 202)? I am being forced to reduce the number of antennas and also to move the to a new location in the house with a longer coax run.

I plan to put the coupler just inside the house (with a Grove EMP surge protector) and then coax leading to the scanners.

I mostly am interested in Milair and aviation traffic. Once in a while I do some trunk police freqs.

Finally, I have the same problem with my HF (using dipoles) and was looking at a multi-coupler there (I will be posting a comparable query on rec.radio.shortwave and rec.radio.amateur.antenna).

Thanks

What is the number that die from drug abuse Dwight? More than those that die from alcohol abuse? Nope. More than those that die from a bad reaction to aspirin? Nope, not that many either.

Source record: 67346
Cross-posted to: rec.radio.shortwave,rec.radio.scanner

It keeps getting better! Continued operation of the VR-5000 is very encouraging. I did some testing on my 1.9 GHZ cellular phone and also my cordless phone. These are all digital but sensitivity was very good showing a FULL scale s-meter deflection from a low power cordless phone. Also the shape factors of the "3" AM filters are wonderful. Also, the VR-5000 has some neat MODE control. You can have up to 3 modes of operation when in SSB operation with AUTOMATIC functions implemented. Again, the operational manual is very poor. I am discovering a few things just by accident. They key is to remember what keys are presses and write it down. Many keys serve more than the "DUAL" functions shown on the key and above the key. Hitting they key twice can toggle it into a 3rd mode of operations... Well it is raining in Southern California so a good day to stay in and play with the radio!!

Hello all,

I have a RS Pro-90 and when the scanner is plugged into the wall or cig lighter the battery does not charge. I have to have the scanner plugged in all the time. I bought a new battery thinking that the battery was bad and that was not the case.

Can anyone out there in scanner land help me out.

Thanks,

Steve Allen

Hi everyone

Is there any "Winradio" user out there that would be willing to comment on it's performance (given a reasonable antenna) ease of use,features, and any general things I should be considering as I am thinking of maybe purchasing one as I really have no need for a portable scanner.

Thanks in advance

Ian & Linda Jordan

I've been using the MCA-204 for two years and I'm very pleased with it's preformance. The difference between the active and passive units are the active models include broad-band low-noise amplifiers and front-end protection they require a 12 volt source. The passive units are just that passive. My coax run of RG-6 is relatively short and is not much of a factor in my case. I run four radios and have never had any type of a problem with this installation.

On another note I have experimented with a GRE amplifier. The result was less than favorable, there was an increase in the noise floor and a very noticable loss in weak signals. The amp was removed from the above system then connected directly to another receiver and of all things an amateur dual band rubber duck with excellent results. The only thing I could figure is the combination of gain from the outside antenna and the amp over loaded the receiver. The less gain of the dual band duck was prefered by the amp.

Good Luck with your installation hope this helps

2025. Speech/Frequency Inversion Descrambling!

Newsgroup: rec.radio.scanner
Date: 2001-04-08 01:21:14 UTC
From: ctpds49@aol.com
Message-ID: <20010407212114.27185.00005253@ng-ch1.aol.com>
Source record: 67263

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

At the college where I teach, we have a "youth challenge" program. (Code word: Boot Camp for troubled teens) The DIs use motorola-style handhelds to communicate with each other. Some look like the radio crack models, but I haven't gotten close enough to these folks to get a good look at what brand they might be.

Any ideas on what frequency range to look for these folks?

Thanks!

There's a law enforcement somewhere in the southeast (Georgia, I think) that is on the same freq/PL as the CHP. One time while here in L.A. area, I heard the out of state agency talking about hearing CHP calls on thier freq and vice versa. Pretty cool stuff!!

This was on a BC895 connected to a discone on the roof of a 5 story building.

I have really enjoyed mine... Go to this discussion group to see what others think.

http://groups.yahoo.com/group/winradio

I can't tell you how it stacks up to other scanners, as I don't have any, however it is as sensitive as most of my VHF/UHF amateur gear... It does suffer greatly compared to HF amateur equipment, but does as well as any of the "general coverage" types of shortwave equipment I have used in the past...

Put yourself up a fair outdoor antenna 20-25 feet, (I use a discone) and depending on terrain, you should get the repeater outputs on vhf/uhf out to 100 miles 24/7, but this will depend greatly on the coverage area the system was designed to give it's users. If the coverage was set up for a small town 100 miles will be a stretch. On the other hand, a system set up for state police coverage will be available much farther out. (The difference is in the systems power output and antenna gain/height) Don't even try on the 800 mhz or trunked stuff at 100 miles.

Hello News Group Community.. After programming in about 400 local frequencies I can now determine that the scan functions are first rate. The visual display of active frequencies, the ability to use the band-scope along with scanner functions is very useful. Sensitivity and selectivity continues to be outstanding on all frequencies. My JRC NRD-545 has the UHF converter built in. This is good up to 2 GHZ, but the unit does not HEAR what the VR-5000 hears. On a few stations I used for testing, the 545 showed a S-1 reading on a weak station from Mt Wilson in Los Angeles. That is about 125 miles as the crow flies. It was very static ridden and hard to understand. On the VR-5000 S-5 , loud and clear. I needed to PEAK the tunable RF peselector, and that made a BIG difference on this weak station at 461 Mhz. But then that is why they put the feature in the radio, to peak the RF front end for maximum RF gain.. Have a good weekend!! BTW, my antenna is a DISCONE made by Radio Shack.

I thank you both. I don't get the feedback like I did. but I still have the problem. If you tap the radio or even touch it. it acts like it is aplified. you tap on the case. and coming out of the external speaker you can hear your tap. sounds like there is a mic inside. but all three of my 2045's did it. then I thought since all of these three had the built in ctcss board now. I removed it. never know if there may have been a prob there. but nope. still have the problem.

well I can feel the warmth pretty well when i touch it. but ya. If I think
about it. it does get hot to touch. but not to blister burn you or something
like that. Sort of like touching a hot lighter

Robert,,, Hi there again,,,
Glad to see you up and posting so much info on the VR-5000. I would have been asking or at least, throwing in my 2 cents worth in the last few days but I have been away for the weekend. I thought I needed a break as, with my illness, I virtually haven't been able to leave this room for the past 3 and a half years. A friend offerred me a small trip away so I quickly grabbed it. I grabbed all the necessities and away I went. What a neat time I had too.. Anyway back to business...

Hey,, we have got to keep this VR-5000 stuff/info on the boil as I always thought that it was quite a lot more powerful than the weak manual suggested. I am really glad to hear that Yaesu have decided to reprint the manual. I just phoned my Yaesu outlet (they'r not really a Yaesu dealership though) and they had never even thought to question the manual but he hasn't heard anything from Yaesu yet on that... He will keep me informed if/when any new literature arrives, he assures me.

Can you spare me a few minutes of your time to answer a few easy ones?

You say you have programmed about 400 frequencies into memory. What happens when you get to memory 100+, since there are only 2 places for the digits on the LCD panel. Presumably this would allow the use of mem channels 00 to 99. Does the set automatically put the hundredth one into a new bank? With only 2 digit places, memory channel 1000+ would also suffer the same fate.. Do you get what I am asking??

Have you figured out how to divide the memory channels into banks? I wouldn't mind having 20 banks of 100 channels.. I am hoping that I can do this before I start grouping different types of received signals - police, ambulance, fire, air traffic, business, TV, FM radio... that sort of thing.

How about actually deleting a memory and its contents? My manual shows how to mask but not delete a mem channel...

There, that will keep me going until "next time". Hahahaha... Well, you said "I know" and now I might just be tapping you on the shoulder to say "how do..?". I always did believe that the quickest way to learn was to ask. Consider yourself lucky that you don't live in the same town as me. Hahahahaha.!!!!

I like your suggestion on remebering which keys you pushed when you find something new. ME,,, I am too scared to push any new keys to find out, at the moment. Maybe soon I will work up the nerve to "explore".. You can bet your boots though, that if I find something new,, it will be posted in here the very next moment. I have lots of time to kill so I will wait for any

new developments from any source.

I have tried my VR-5000 on HF SSB but found it to be a few Hz off frequency (about 100+ Hz). The 20 Hz adjustments at these frequnecies is too large anyway. I like to be able to do an absolute minimum of 10 Hz adjustments. 1 Hz is even better for the real fussy listener but not totally necessay. My ears can notice as little as about 5 Hz when tuning in on most USB transmissions but when tuning 2 HF receivers side by side on the same frequency, your ears can notice far less than even 1 single Hz with the 2 different audio signals acting against each other, creating a third signal (unless they are both "spot on" with each other). This practise is very good when making internal adjustments to some receivers. I don't encourage this sort of activity though unless you are really self-confident.

I am going to copy and paste all info posted, into a VR-5000 file.

Hope to hear back from you or others asap.....
Cheers until next time.....

I have been using the MCA204 for at least a year now. Works great.
The only down side I have seen is that the active circuitry provides
some gain at the low end to compensate for the loss of splitting the
signal. The added gain cause some problems in the 2M amateur
band due to a strong FM station nearby.

One thing I will say is that Mr. Stridsberg is an excellent person to
deal with. When I told him of the problem (at the time the cause
was unknown) he took the amplifier, did extensive testing and then
returned the muticoupler. He even upgraded some of the circuitry
at no charge because I had one earlier models.

Actually, the day I installed my first outdoor antenna is when I yanked my analog cordless phones. I stumbled across frequencies the like of which I never thought possible. Even the local McDonalds, some distance from my house, was quite intelligible. I bought digital, 900MHz phones as replacements.

Everytime I am at the local Radio Shack and I see someone buying a cheaper cordless (analog), I tell them that their signals may be intercepted by a scanner, but no one (but one) ever seemed to care.

I wonder why most Americans always think the solution to a problem is from government action to limit even more freedoms. Technology provided a solution, and education would help to protect people from their own stupidity. Evolution favors the better adapted, and if the government had been here 100,000 years ago (100.000 for you Europeans that insist on using a decimal point where a comma should be) ago to protect the Neanderthals, we would all be eating meat from a stick held over an open fire.

Wake up people, the government isn't the solution. We don't any stinkin bans. We should be asking why they banned cellular frequencies when the Canadians and the British did not feel such a compulsion.

Ron,

Try reviewing the site http://www.strongsignals.net/. This site appears to be one of the standard references for newbies. I used this to determine my intial antenna.

I ended up with a RadioShack Discone mounted ~25' up. YMMV.

Happy scanning.

Hi Rich

Just a suggestion. I own an Icom IC-Q7E FM Transceiver. It is tiny - smaller than a pack of cigarettes. It receives from 30-1310mHz (+ 495kHz-30mHz via PC programming) - AM-NFM-WFM and after mods. will transmit from 136-174mHz and 400-470mHz. Although probably not legal in your country (but in an emergency, who cares?) it could be used on Amateur, Marine, CB and FRS bands for communications. Not sure of price in USA but probably within your budget.

A Motorola Talkabout Model 6310 would handle the FRS channel scanning, FM broadcast and weather, but that would be it for receiving. They list for $120 (AA battery version, $150 for the NiMH version) so the online price should be better. With one of those babies, you could transmit FRS as well, of course, if that's what you want.

If you're looking for a wide band receiver, consider a Yaesu VR-500 receiver. The European version (importable to the US at a decent price from www.bander.com) would give you the unblocked coverage, or you could stay legal and just get a US version at any ham radio dealer online for about the same price. This baby covers 100 kHz to 1.3 GHz, all receive modes (including CW and SSB for the HF ham bands) with preset weather channels and tons of memories and scan/search features. It's a small handheld unit that goes for under $300. Just don't use the stock antenna if you want to receive the weather stations. I could recommend a Scantenna Mark II from CRB Books online (only slightly bigger, but much better performance overall). With a telescopic whip antenna, you could get AM broadcast, too.

If you feel like getting a Technician class amateur radio license (pretty easy, no Morse code required), you could get a Yaesu VX-5R transceiver to do most of the above (the receive range is a little more limited than the VR-500, and, of course, using it to transmit on FRS frequencies is not strictly legal--only in an emergency situation, but possible with a very simple mod), and you'd be able to transmit on the VHF/UHF ham bands as well.

This scanner has been SOLD, thanks to all who responded!

I have a beautiful, like new condition RELM HS-200 hand held scanner for sale. This one is very sensitive, a great performer and was made for RELM by Yupiteru. Does PL and DPL tones as well. Also includes the custom vinyal case ($25.00) and four (4) MAHA 1550 mAH NMH batteries ($12.00).

$100.00 plus $6.00 shipping to USA only, via USPS Priority Mail, insured.

No COD or Trades!

I will accept a US Postal money order or PAYPAL only, NO CHECKS!

E-mail if interested.

Dan

That's a question and a half isn't it?
What frequencies are you talking about?
Some scanners receive way down from 100 kHz or lower to way up into the 2+ gHz range... Just about anybody can receive worldwide frequencies on the HF band on an HF receiver or a scanner, so interstate is certainly in the question...
As for VHF and UHF - I have received and talked to other hams on 2m (144 mHz) from another country when conditions are right. I live in New Zealand and have talked to Australians - that's over 1200 miles away.... This is known to also happen with 70cm (432 mHz) as well. It's called tropospheric ducting. The signal travels upward from the source, finds a hole between two atmospheric layers and travels as far as the "hole" goes then radiates all around from there.
This is probably not what is happening to you but it does illustrate that odd things do happen and always have an explanation.

In the "normal" world, you can most likely hear from many many miles away on VHF/UHF on a regular basis. I always listen to police repeaters here well over 100 miles away and somtimes up to 200+ miles away. Our country is as hilly as heck.
Things that can determine what you hear are..
Your geographical location with respect to the far surrounding countryside.
Your location with respects to immediate surrounding objects like close hills and trees and buildings.
Atmospheric conditions.
The transmitting party location (and its power to an extent).

The line of sight rule is as good as any but is quite often not always the only rule. It does happen.. The only way to find out is to try... Get a good antenna for your scanner and go to it... Log what/when you hear and what frequency it's on. Listen for callsigns, locations and other giveaway talk. It will soon become clear as to whether you can or not....

2056. More-FEEDBACK on the Yaesu VR-5000!!

Well I am short on time tonight but let me say this. You have a bank of memories. That would be from 00 to 99, or 100 per bank. Then you have a memory Group. 20 groups, or 20X100=2000 ... I have 14 groups at this time or about 30 stations stored per group. Fire, police, US forestry, Airplane, TV stations, CB radio, special ham radio nets etc. I have only entered stuff, not tried to delete or over write anything... Got to run. Very busy week ahead. Glad you had a chance to get out and relax!!

I recently got back from Waikiki Beach in Honolulu, Hawaii. While staying at the Hilton Hawaiian Village I noticed that the room had a cordless telephone. In fact the entire building had a cordless in every suite! While this in itself is not a big deal, it becomes one when ALL the phones are ANALOG 900Mhz units. It was impossible to hear any Amateur comms on the 902-928Mhz band. If someone was so inclined to listen there, it would be a real "bonanza" of listening. the person who specified these phones should be slapped silly.....Eddie

I have one that I just took out of my 2045. it works great, I thought it was causing a problem on my radio. but it wasn't the culprit. I am either gonna install the tone board in the radio again. or I am gonna sell teh tone board seperate and the radio seperate. if you have a offer for the tone board. I may sell it. US and canada forsure a sale.

Speaking on behalf of the United States of America and its citizens, I, Rush

Limbaugh, officially say that we are sorry that you've killed millions of your own

people during your Communist revolution.

We're sorry that you killed millions of your own people during the Cultural

Revolution.

We're sorry you killed thousands of your own people in Tiananmen Square.

We're sorry that you continue to kill the Falun Gong.

We're sorry that you stole our nuclear missile technology.

We're sorry you are able to buy a presidential election, maybe two.

And we're sorry that Senator Dianne Feinstein, whose husband has investments

in your country, couldn't keep her mouth shut when attempting to apologize in the

name of our country.

Does that work for you? Probably not, but that's my apology. We will bury you.

Hi,

What is the price of a half decent Base Scanner on the
market today?.

As I want to move up from Radio Shack's (REALISTIC)
PRO-51 HYPER-SCAN {UHF/VHF, HI-LO-AIR}
200 CHANNEL DIRECT ENTRY PROGRAMMABLE SCANNER [HAND-HELD]..

THIS UNIT ALSO HAS AIR,FIRE MARINE,and WX.

An unblocked Base Scanner would be nice since I live in
Toronto,Ontario (Canada). As I can receive cordless phones & cell phones on
the PRO-51..

Thank-You

PLEASE Remember! forest fires prevents bears!.

Have a good day/night where-ever you are.

And have a very HoPpY EASTER!

Id like to fuck myself but Im reading a scanning newsgroup. If I wanted to express my political views I would take it to the appropriate discussion group. If I wanted to fuck myself, I would go to the approrpriate newsgroup to do that. Im sure its out there....

As for the those fine service men and woman I pray for thier well being. Im the son of a 35 year military soldier. I am the proud decendant of the United States Military. My Grandfather was a POW in China during WWII. He was taken prisoner as he worked for the State Dept. I support these fine soldiers and the decisions that they must follow. My personal and political views are better spent on other newsgroups. If we want to bring it to this newsgroup, lets talk about the surveillance equptment on board the P-3.

What happened is a tradgety and lets hope its resolved peacefully. Scanning is an hobby for me and I prefer to escape the problems of the world with my hobby. If your pissed about the chinese thats great...we all are. All Im saying is: take it to the appropriate newsgroup.

Hi All
Have had a lot of questions on auction below.
C156 is FM 2mtre handheld with wide band coverage.
http://page.auctions.yahoo.com/uk/auction/50643541

Q: Range of Reciever
A: Frequency on transmit is normal 2mtrs, frequency on rx is approx
100mhz-174 mhz yes I know it will go above this but the pll unlocks so I
cant say it will.
Q:Power output
A:Up to 5 watts
Q: reserve price,
A: Well there isnt one I have just bought a new rig so its sat there looking
at me so I may as well sell it.(the price bidded at the time of posting was
£50 the only bidder)
Other than the above
Transciever includes:
2 Nicad battery packs CN156 (they push into the base and form part of the
case, so quick change over)
1 Charger for above nicads
1 Nicad case the same shape as CN156 but put your own nicad batteries in (as
came standard with C156)
1 fused connector lead for connecting C156 to 12v power supply
1 speaker mic CMP127
1 Manual
and Original Box in new condition
1 original rubber duck antenna
postage will be charged at cost (probably about 4-5 pounds)

Think this covers everything

If by asking a question that ruffles feathers, so be it. It's people like you that keep friction on the various newsgroups. Instead of trying to be destructive, why not try to be constructive. I have been on usenet for ten years and all if is has done in the past five is gone down hill. Yes, "scandude", I am lonely, for some rational conversation in the newsgroups. I should have known better than to ask any question here. Now go back to your sandbox.

And by the way, I did find a 780XLT one of the suppliers had it in his office.

2079. RS software/cable pkg for PRO-2052?

Newsgroup: rec.radio.scanner
Date: 2001-04-09 12:24:41 UTC
From: Den6N <djmr26@bestweb.net>
Message-ID: <dShA6.1331$4e.346857@newshog.newsread.com>
Source record: 67217

I bought a PRO-2052, and subsequently learned that RS sells a package specifically for it consisting of software and PC cable, but apparently they aren't getting any more to sell. Can someone tell me if it's either available
elsewhere or what company actually produces the package, since it's obviously not made by RS itself. I've looked over a lotta software on the net, some of which do incredible things, but I'm simply looking for the ability to program the 1000 channels from the PC. If you can suggest a comparable software product for simply programming that I won't have a nightmare dealing with bugs, feel free to suggest it. I would, however, prefer the original package that RS sold. Thanks...

Thanks Shane. I do have the frequencies for the analog system. It just gets annoying when you are listening to something interesting and it just cuts out on you. Please let me know what you encounter.

David, your email did not work for me so I will reply this way...

DPS, well I would play around it. DSP will work best with MODERATE adjustment on the band width. NR can be on as well. I hear a significant improvement when I turn mine on??? This may be user preference. Each mode of operation, CW,SSB,AM etc. have its own DSP setting. ON AM I leave the 150 and 3000 KHZ function OFF and just use NR. On SSB I reduce the DSP bandwidth to 350 KHZ and 2300 KHZ with NR on. ON CW I set it at 400 and 1000 HZ. NR "off"... Let me know how it goes!!

2082. Discriminator Tap on bc 855xlt

Newsgroup: rec.radio.scanner
Date: 2001-04-09 14:36:17 UTC
From: larry mcghee <zenox-7@home.com>
Message-ID: <3AD1D5FD.6388EDE4@home.com>
Source record: 67220

Hello all: I inherited one of these units recently.
I was just wondering how difficult it is to put in a discriminator tap.
I found out what chip to use from the net: but I have not found a step
by step for this specific model.
I have not taken anything apart yet as I would like to make sure I can't
screw anything up during disassembly.
I am interested in anyone''s experiences with this install.
cheers
larry

2083. Scanners for sale

Source record: 67221

For Sale;

Radio Shack 2067- 500 Channel multimode trunk tracker.
Does Motorola Type 1,2,EDACS, and LTR systems.
Also tracks conventional channels and has programmable PL and DPL tones. Alpha numeric display.
In the box w/ mounting bracket,dc power cord,clone cable and manual. Radio is less then 1 year old. Has some minor scrathces on it from an in dash mount. Otherwise radio works fine.
No software for programming but it is avialble through Radio Shack.
This radio can be cloned from another radio of the same model.
$175.00

Radio Shack PRO-2066, 150 Channel Trunk Tracker.
Does Motorola Type 1 and 2 only and conventional.]
No PL or DPL.
In the box with mounting bracket and manual. Some minor scratches from in dash mount other wise in good condition.
This radio is a little over a year old. $90.

Radio Shack Patrolman PRO-2026.
100-Channel scanner.
Looks like a Uniden 760xlt. Works and programs the same way but does not do PL tones.
This radio is about 8 years old.
Works very well.
No bracket or manual.
$50.

Recently acquired a Uniden 780XLT and no longer use these radios.
If interested please let me know. edfox25@mediaone.net

I will accept cash in person or a money order.
If we are dealing by money order I will ship the radio by either FedEx or airborne express when I receive the payment.
I will also send you the tracking number.

>appreciate and recommendations about adding an antenna. Thanks!

One word of advice: Despite living in a rural area, DO NOT fall in to
the temptation of using a pre-amplifier unless you're using a very
long and lossy coaxial cable (such as a 150' long run of something
nasty like RG-58). You're better off spending your money on some
decent coaxial cable (Belden 9913 anyone?) and a discone antenna at a
decent altitude (as high as you can get it and higher is better).

Those two pieces of advice are the big fundamentals. As for precisely
which model of antenna to buy --well, weatherproofing is more
important than the antenna itself. Buy something durable and don't
worry about the gain.

Finally, after all this, don't be afraid to invest in a switchable
attenuator. You may discover that your scanner will be overwhelmed at
times from too many signals. I know that sounds strange, but the very
nature of scanners is that they are a trade off between strong signal
handling and wide bandwidth. The result is that they can overload
very easily. The good news is that a 3 dB attenuation can result in a
6 dB or more attenuation of the interfering signal.

You may think you're rural, but these days you'd be amazed just how
much RF is out there...

73,

Jake Brodsky, AB3A mailto:frussle@erols.com

This radio is a little over a year old. $90.

Radio Shack Patrolman PRO-2026. 100-Channel scanner.

Looks like a Uniden 760xlt. Works and programs the same way but does not do PL tones. This radio is about 8 years old. Works very well.

No bracket or manual. $50.

Recently acquired a Uniden 780XLT and no longer use these radios.

If interested please let me know. edfox25@mediaone.net

I will accept cash in person or a money order.

If we are dealing by money order I will ship the radio by either FedEx or

airborne express when I receive the payment.

I will also send you the tracking number.

Indeed - my ISP filtered out the original post because of the
cross-posting, I guess.

And my newsreader won't let me post to all those groups, either!

The logic that any good cause merits totally off-charter cross posting
is naively attractive, but quite stupid if UseNet is not to be totally
clogged with such stuff.

Those 24 men were over china spying on them.
All of them are probably going to be considered spies by china
as you know how evil china is.
I don't blame china for being pissed.
As far as an apology though, they can eat our combined shorts.
I would appologize to Japan because they are a humble nation and appology
is how you do business with them as it doesn't mean defeat, it means humbleness
and respect. But not China. China doesn't deserve anyone's respect as they don't
respect themselves.

FOR SALE:

Regency Z60, compact, programmable 60 channel scanner.

This is a three band, FM monitor receiver and digital alarm clock for use at home or on the road. It is a double conversion, superheterodyne used to receive the narrow band FM communications in the amateur, public safety and business bands: 30-50, 144-174, and 440-512 MHz.

This unit is in excellent condition with no visible damage and includes user's manual and telescoping antenna.

The unit works fine including all the LED readouts. As with all used electronics, "as is" applies. **Picture in .jpg format available to those interested**

Price: $45, Shipping Included via Priority Mail.

Buyer must prepay with money order or cashier's check.

If interested, please email: kb0zmt@home.com

I believe that the headset is connected to the phone via a cable of
some type. This is something you should not worry about. (the
cable connection from the headset to the phone) That is not what is
"scannable". The transmission from the hand piece to the set is what
you should be concerned about. The handset is like a small radio
transmitter that communicates with the base portion of the phone via a
certain range of frequencies.

I don't think headsets for cell phones and "regular" phones
interchange. I may be wrong on this?

From reading this group I believe that some of the so called spread
spectrum phones can be monitored..... The regular cordless phones
can be monitored for sure. If security concerns you that much then I
would suggest you use the regular "fixed" phone for your private
conversations or invest in a "secure" phone which I'm sure will be
expensive.

The bottom line is that most anything can be monitored if one has the
right equipment and knowledge. Tapping the phone is one route that
could be used to monitor the phone signal.

I think you need a headset tailored for your specific cell
phone..... not sure if they all support headsets or not.... My
guess would be that many of them do not.

I'm far from an expert and have relayed what I've read and observed.
I certainly may be wrong in my observations and anyone feel free to
correct my mistakes.

Look in one of the office supply catalogs and you'll see a number of
headsets made for people who are on the phone all day long, that
connect to regular desktop type phones.

Yes its a shame reasonable non insular people like you are not in charge of
bombs! Let me ask you a question. How would USA act if they found Chinese
spy planes flying around the coast of America?

Ha Ha Ha, I needed a good joke to lift my spirits.
The only thing Clinton or Gore would have done differently would have been
to collect campaign contributions or blowjobs before apologizing.

Thanks for reading my post... I'm doing my spring cleaning, and need to make room...
Please e-mail me if you have any questions.

Sony computer programmable scanner, 1 year old. Very good to excellent cosmetics, and works like new! Comes with box, manuals, cable, AC adapter, ear phone, CD, and belt clip. It hasn't been modified in any way. I just don't use it enough to justify keeping it around...

Asking $150, including Priority mail shipping.

I also have 3 older computers for sale, whole or parts, they all worked the last time I used them, but sold as is...

1) Tandy 486/25, 8Mb ram, 2X CD, sound card, graphics card, floppy drive, and power supply in an AT desktop case. NO hard drive! Best resonable offer, plus shipping.

2) Tandy Sensation 486/33, overdrive socket, 8Mb ram, 2X CD, floppy drive, sound card, graphics card, and power supply in an AT desktop case. NO hard drive! Best reasonable offer, plus shipping.

3) Custom built Pentium 133Mhz, with Win98 CD and manual, Acer motherboard with manual, Jaton Video 57P graphics card and CD, 128M ram, 40X CD, floppy drive, 2 hard drives (1.0G & 1.2 G WD Caviar), and power supply in a mini tower case. May separate for parts... Best reasonable offer, plus shipping.

4) 2 peices each: 16M EDO and 16M FPM SIMMS ram modules, will work in item #3. $15/pair, including shipping.

5) Zoom fax/modem, 28.8K, fits in a ISA slot, with manual. $15, including shipping.

6) Zoom fax/modem, 56K, 1 year old, fits in a PCI slot, with installation CD and instructions. $25, including shipping.

7) Zip 100 external drive, 1 year old, with Zip Rescue software and cable, manual, AC adapter, installation CD. $50, plus shipping.

Thanks!
Steve B.

Depending on what range of frequencies you are looking for there are several options; for a good reference and side by side look at several, visit http://www.strongsignals.net/

See Antenna section there.

Hope this helps.

That is exactly what the problem you have is called, "microphoning". It is caused by vibration in a component, usually a crystal (yes, you do have a crystal or two inside) or some other component that can vibrate. The cure is to dampen the vibration at the component. If you can isolate the offending part, you might try coating it with something like rubber cement, just don't get carried away and douse the insides of your radio with it. Hope this helps.

Actually, we intercept Russian aircraft on a regular basis. Our only action is to fly near the aircraft, identify it, make sure the crew knows they have been spotted (without knocking the nose off of it) and report it. No big deal. China is just huffing and puffing over nothing and dragging this thing out way too long. Just think before you buy your next Chinese built product.

Yes, bomb them all. Show them the American way. Gore would probably
demand the Chinese reconsider his decision until they got tired of his
whining and finally gave in. Clinton would bomb China without knowing
what's going on. Bush is a panzy, I'll give you that, but this was a
SPY plane. Those pilots were suppose to AVOID contact with the enemy,
not crash into them (anyone else see the irony there?). I'm not sure
it's even right for us to demand it back, the passengers yes, the plane?
No.

Well, first of all, "made in China" doesn't mean a Chinese corporation
made it, it means some European or American corporation went there,
setup a sweat shop, and had it assembled there with cheap materials and
labor because they don't have child labor laws in those countries.
Secondly, if it were any other kind of plane, I'd say they should let it
go, but a spy plane is a method of espionage. It's like saying that
because a missle we launched at the Chinese accidentally failed to
explode, we demand it back so we can launch it again.

Here are some Direct URL's for Oklahoma City Frequencies and one to PerconCorp:

http://www.911scanner.8m.com/~USA_Oklahoma/OK-OklahomaCity.htm

http://www.bearcat1.com/oklahoma.htm

http://www.cityfreq.com/ok/oakahomacity/

http://www.cityfreq.com/ok/oaklahomacity/

http://www.perconcorp.com/datafinder/index.html

(Click US Frequencies then Scroll down to Transmitters in a City and enter what
city you seek.) For Percon Site.

Not that familiar with Oklahoma so I just nailed some for Oklahoma City,

You can find Search/List pages on the FAQ section of PB Scanner, just use link
in signature file.

Hope these help,
PB Scanner
Palm Beach Scanner FLA,USA.

Your "analogy" . . . well, the quotes explain that sufficiently.
However, your comment brings to mind what we should do, which is send a missile to blow up the spy plane.

This is a update from the post below from Jim.

I took off the sheilding cover that covers the IF crystals and half of the board. Under there are the IF circuit, to looks like either chokes or inductors. Don't got the service manual. Anyways. I was trying to find the culprit. But when I Unscrew this sheild of about 6 screws. I Pull of the sheild and the problem permanantely goes away. I put the sheild back on and it is there. I have tested to see if it will receive any strange RF due to it being off and I don't notice any, except for the usual RF you get with a scanner. A question is. If that sheild is off and I don't have the problem. what could it be ? amd second if I leave it off. Will it do anything to the circuitry under that sheild.
I appreciate all the info though on these two posts

Dev

Times Microwave LMR-400 is better than both. Don't have any connection with them just use their cable and love it! Specs are better than 9913, easier to handle and put connectors on.
http://www.timesmicrowave.com/ . If you do your research you will end up with some LMR coax.

Us old-timers remember the good ol' days when Radio Shack was the ultimate hobbiest's playground -- along with competitors Lafayette Radio, Allied Radio (ah, those Knight kits!), Heath and many others. Resistors were sold out of barrels, not in blister packs -- and the guys behind the counter were fellow hobbiests.

Later -- in the early days of computers (remember the Trash-80 and the Model 100?) -- most of the sales guys still lived and breathed the stuff. There was a time when there were more Radio Shacks than McDonalds.

But time marches on. It's not Radio Shack's fault that ICs replaced tubes and transistors. Once upon a time RS sold "how to build your own backyard satellite dish out of chicken wire and 2"x4"s" books; now they market DirectTV. **sigh**

Obviously, Radio Shack won over their competition (and could thus began resting on its laurels) because they were the best _marketeers_. Kinda the same reason why AOL became the #1 ISP, and Windows the #1 operating system. The biggest is not the best... just the biggest. And now, for all practical purposes, the only.

Although there are two Radio Shacks (Radios Shack?) within a mile or so of me, I find that dealing with the stores to be so frustrating that -- when I need something only RS sells -- I buy it via their web site and let UPS bring it to my front door. Like so many others, I like their products (especially those under $10!) -- but not their bricks-and-mortar service.

Then again, there's always http://ramseykits.com

Finally... if you want to re-live Radio Shack's glory days, try to find a copy of "To Catch A Mouse, Make A Noise Like Cheese"

2167. Navy Orders Seconds on Digital Modular Radio

Navy Orders Seconds on Digital Modular Radio;
Motorola's Technology to Offer a Smarter and
More Synchronized Solution

April 9, 2001

SCOTTSDALE, Ariz.--(BUSINESS WIRE)--April 6, 2001 via NewsEdge Corporation -

Motorola (NYSE:MOT) Friday announced that the U.S. Navy Space and Naval Warfare System Command (SPAWAR) has awarded a second production order of $39.6 million to Motorola under their AN/USC-61 Digital Modular Radio (DMR) program, bringing the total contract value to $95.6 million.

Based on Motorola's wireless information transfer technology, the DMR is a software-controlled and re-configurable digital system that allows the Navy to increase flexibility and provides interoperability among diverse legacy radios while providing a migration path to future upgrades. This most recent award is a continuation of Motorola's role in enabling the Navy to successfully field Software Definable Radio (SDR) technology.

It also demonstrates Motorola's commitment to advancing the Joint Tactical Radio System (JTRS) Joint Program Office's (JPO) vision of affordable interoperable radios. Motorola's wireless information transfer technology is being used under a separate contract with the JPO to validate its open standard Software Communications Architecture (SCA).

"Motorola is committed to work with the Navy to further assure the DMR will be compliant with the JTRS envisioned for joint services usage," said John Cole, vice president and general manager of Motorola's Information Security Systems and Products Division. "Software Defined Radios are the new standard of the radio world -- combining computing, networking and radio technology into a single product.

"Motorola's innovative design permits users to change characteristics in battle or remotely, which will help save time, save space and offers a smarter, solution through improved situational awareness."

The DMR is part of the Motorola Wireless Information Transfer System (WITS) product line and it employs commercial-standard processors and software to provide increased flexibility and extended product life.

The DMR enables the Navy to train its radio operators on one platform and replace numerous, previously incompatible systems with a single system which

communicates seamlessly with different armed services as well as the U.S. Coast Guard and NATO allies.

"The Motorola units demonstrated the key features of re-programmability, operation with existing radios and mechanical endurance for the challenging environments aboard surface ships and submarines," said Capt. Madsen, SPAWAR PMW-179. "The DMR will replace the single purpose radios allowing greater flexibility for our fleet users."

The most significant advantage of a WITS-enabled, software-programmable radio system is that a user can change the radio's bandwidth, modulation, security and waveforms with software commands, rather than the current, more costly approach of replacing system hardware.

In addition, since operators need to train on only one system and maintain a single set of spares, customers should achieve a lower total cost of ownership over the life of the product.

A key element in the Motorola DMR is its embeddable Advanced INFOSEC Machine (AIM), which recently received Type 1 Certification from the National Security Agency. With its on-board Secure Operating System, it simultaneously operates on multiple channels using different algorithms, enabling it to potentially replace many standard encryption functions with a single device.

About Motorola

Motorola Inc. is a global leader in providing integrated communications solutions and embedded electronic solutions. These include software-enhanced wireless telephone, two-way radio, messaging and satellite communications products and systems, as well as networking and Internet-access products, for consumers, network operators, and commercial, government and industrial customers.

Sales in 2000 were $37.6 billion.

Actually, during the cold war era Soviet spy planes (usually
"Bears") constantly flew three miles off our coasts, and soviet spy
"trawlers" intruded into our 3-mile territorial water limit. What a
mess there was of the latter at every launch from the cape.

Since they were legal, we merely shadowed them to spy on spy --
to determine what they were looking for.

Source record: 67110

zaax@aol.com (ZaaX) asked:
> Can anyone out there tell me what frequencies Amtrak uses between Detroit
> and Chicago?

Amtrak uses the frequencies of the host railroad, except on the trackage
it operates itself. A 5-yr old listing prepared by Bill Vandervoort showed:
Chicago Union Station Amtrak 160.305
Chicago (21st St.)-Porter IN Conrail 160.800
Porter IN-Kalamazoo MI Amtrak 161.325
Kalamazoo-West Detroit Conrail 160.800

In the old Conrail territory you should also check:
CSX road 160.230
CSX dispatcher 160.320
Norfolk Southern 161.250 or 160.440

I know how you feel. I have had the same thing happen to me many times. Of course the better the information you have and the harder you work to compile it, the more people will steal it and claim it as their own.

Once upon a time I had a government official try to shut down my website because he believed that the information I had about their radio system was taken from their radio shop (it wasn't). Since then I've learned that distributing all the info I have to as many places (websites) as possible will help to deflect that type of ignorance.

Here is what you should do. Make a list of frequencies and talkgroups for your area that consists of the many primary services. Send it to everyone that publishes that type of information (Bearcat Radio Club). Now wait until they publish it, then post on your own website all the rest of the frequencies and talkgroups you have compiled. Now you will have the best and most complete information and their stuff will be second rate. Chances are good that they will be very slow to update their information.

The shield, in most cases, is to prevent stray RF from LEAVING the oscillator area, not the other way around. It sounds as if the shielf compartment is causing some resonance when the top is on. If removing the top causes no problems with reception or with any other nearby equipment then, by all means, leave it off. Leaving the cover off will not harm the components therein. Good luck.
Jim

You neeed a lesson in aerodynamics. One does not "crash into" an F-8 fighter with an EP3 "Orion" (basically a transport aircraft, modified for electronics). That would be about the same as saying that a two and one half ton truck ran down and crashed into a Ferrarri. The "spy" plane, and there is nothing wrong with spying, we all do it and it is accepted as part of international politics, flys straight and level except when turning to reverse direction. The EP3 does not turn fast, again it is a transport, and the crew is trained to not make any sudden moves when in the proximity of ANY other aircraft. Remember, military pilots train for formation flying. In ANY case, the Chinese pilot was far too close to our aircraft. Interception does not require the trading of paint with the intercepted aircraft. Wang Wei (Wong Way) had a history of "hotdogging" and pretty much did as his name implies, when the Wong Way and hit the NOSE of the Orion. At least now the crew is on the way home and the aircraft is being stripped by the Chinese.

Heres what I have for Amtrak
160.845
160.920
161.295 Police

Try a scan from 160.215 to 161.565
which is the range most trains use.

Hope this helps

Does anyone know of an article (perhaps from a scanning magazine) which describes how to make your own PC interface cable to program the new AOR AR8200? I see several different versions are available commercially, but $100 seems like an awful lot to pay for a cable like that. It seems like something that could be made in the shack for a lot less.

Why did you buy one without a manual? Seems a little strange. What
explanation had the seller when you asked about the manual? I hope you got a
good price for it.

If you have problem visit
http://www.mods.dk/mods.php3?model=ic-r10&radio=icom#364 there you find a
quick reference manual until you get a real one.

John,

I actually had a radio tech from one of the local systems ask
me where I had gotten one of my radios. It was then that
another scanner listener and myself explained how I had
gotten the information through public sources and good old
detective work. The site that I mentioned as "stealing information"
does lag behind my information and most of the times by
a fair amount. It just the idea that they have no qualms
about taking the info and giving no credit. Knowing this, I
could not do business with these people.

i'm not sure if I'm near an IRLP repeater or not. I don't get on the air much any more, too busy with other things...wrok, race cars, house, computer...you get the picture. About the only time I get on is on the local repeater when I'm in the car. I know this repeater isn't linked to ANYTHING but some of the others that I can access may be. Perhaps you could send a list of the repeaters in this area. Hope you got your problem solved.

Jim

Actually, what would be the reason? Our enlightened country provides
access to the same stuff that we are doing the overflites for, but
on the ground. No need for an overflite, just get a visa!

I bet you would even find that between themselfs, they are using
off the shelf comm products, such as FRS for short distance comms.

"Jeff Seale" <jbseale@iglou.com> asked:
> Anyone know of any stores or websites (besides RadioMax) where I can find
> one of these?

If you want to make one -

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

As long as you don't want to listen to 800Mhz trunking, yer get one from Australia. But if you want to listen to 800Mhz trunking, it won't work correctly, as Australian 800Mhz trunking uses slightly different band then the US, making an Australian 245xlt useless.

I'd like to add a correction:

On Mon, 09 Apr 2001 11:45:21 -0400, Jake Brodsky <frussle@erols.com>
wrote:

>Finally, after all this, don't be afraid to invest in a switchable
>attenuator. You may discover that your scanner will be overwhelmed at
>times from too many signals. I know that sounds strange, but the very
>nature of scanners is that they are a trade off between strong signal
>handling and wide bandwidth. The result is that they can overload
>very easily. The good news is that a 3 dB attenuation can result in a
>6 dB or more attenuation of the interfering signal.

I forgot to mention, this applies to IMD. Intermodulation Distortion
Products are a major limiting factor in the performance of most
scanners. Attenuators can have a positive effect toward reducing IMD
problems (usually caused by excessive signal levels at the scanner).
However, attenuators do not help in cases of co-channel interference.

Thanks to MikeN for pointing this out to me.

It's obvious some of you has never faced our foes on the battle field. Going to war isn't always the name of the game. Where we're you marching while we were in Vietnam? Opps, you most likely we're not that old and have no idea what war is like.

As for Mr. Bush and his actions: Not a single American life was lost, that is the most important part. As for the plane - we don't know every thing that happened and i'm not ready to second guess any one. The Clinton/Gore administration were trading US secrets and what ever for cash - that was proven. They would never go to war and lose there funding.

As for who knows who's secrets! The only secrets kept are from the citizens of the various countries. Our government knows there's and there's know ours.

"God Bless America"

Now back to "scanning", which this group was intended for.

Perhaps someday you will learn to read an entire paragraph. My comment of "No big deal" was in reference to the NORMAL way of making intercepts of foreign aircraft in which the intercepting aircraft stays at a distance from the intercepted aircraft. The Chinese pilot died of his own stupidity. He wanted to be a hot dog and he paid for it with his life. While the loss of a life is regretable, in this case it was precipitated by the persons own actions, not those of anyone else. And, to answer your question, no I haven't bought any trainers and I try to not buy anything made in Communist China. At any rate the incident, as far as the people are concerned, is over. The aircraft may or may not be returned. If it is, great, if not, that's the way it goes.

I haven't seen any clear, close-up pics of the radome area but as far as I know there are no explosive bolts used to mount them. Simple reason really, a chunk of very heavy, probably in the range of 300 to 800 pounds, fibreglass flying off the aircraft would be very dangerous to the aircraft itself and the crew therein. The exit could not be controlled and it would probably do considerable damage. From what I've seen the radome shattered on impact. A piece of it is what caused the damage to the #1 prop.
Ever seen a Corvette or other "plastic" car after a crash? That's approximately what the radome would do.

I have a problem with the "Radome crash theory" where the raydome
mounted against the aircraft nose shows no sign of being hit by a
truck but more like someone blew some explosive bolts and dumped
that technology in the drink..

Just my opinion..

Bob

That's part of international politics, doesn't mean other counties
should simply let people spy on them, they accept it because there's
really nothing they can do to stop it.

> flys straight and level except when turning to
> > reverse direction. The EP3 does not turn fast, again it is a transport, and

They should try to stear away from any aircraft. They're a surveilance
plane, they should've seen the Chinese fighter long before they had to
make any sudden moves. They didn't.

I don't know the total circumstances, but in my opinion, when a jet is intercepting
a prop plane, the jet certainly has the speed and maneuverability over the prop plane.
For a propeller driven plane to crash into the jet plane, the jet certainly would have
to be unreasonably close. I would say the points to extremely aggressive behavior
on the Jet pilots behavior.

Hi,
Does anyone out there know of any reviews of the WR1550i? Having read Richard Wells' highly detailed and comprehensive report on the WR1000i, I was not impressed with that particular model. However, that report was a few years ago and I would like to know whether the currently available WR1550i has the same shortcomings or substantial improvements.

Thanks in advance
SB Aris

Oy Say! Funny...you fellas weren't saying that in 1940 when our ships were dodging Hitler's wolfpacks trying to get supplies to you! Nor did many Brits say it when those GIs fought and died beside your "Tommies" to prevent Europe's primary language becoming German!

I am reminded of the movie "Patton" which was "mostly" accurate in which he and Field Marshall Montgomery were in "competition" with each other. Having been held back by Ike in favor of the British 8th Army, Patton once declared, "That's what happens when your Supreme Commander ceases to be an American and becomes an.....ALLY!" Of course, Ike's position was tenuous--he not only had to fight a war, he had to dance around the politics of nations and individuals in order to hold the Allied Command together. Still, Patton once vowed to General Bradley, "I'm gonna beat that Limey sonuvabitch to Messina if it's the last thing I ever do!" And, he did, rolling thru to take Palermo in spite of orders not to. "Ask 'em if they want me to give it BACK!" Cut to the German High Command where, upon being told the news, General Keitel exclaimed, "Verdammt!" (Damn) Then the jeep bouncing recklessly across a field to where Monty is sitting outdoors at a table. "MONTY! MONTY! I SAY, PATTON'S TAKEN PALERMO!" To which Monty slammed his pen down and exclaimed, "DAMN!" Finally, Monty comes marching triumphantly into Messina where, unbeknownst to him, Patton has already arrived and has his Army staged and waiting. Suddenly the bagpipes die pitifully down, and "ole" Monty strides thru the ranks to see what has happened. There stands his rival on the courthouse(?) steps waiting to greet him. Monty then marches up to Patton, salutes and delivers a classic line in his clipped accent: "Don't smirk, Patton, I shan't kiss you!" This is the line that brought down the theatre houses in 1970 in the USA with howls of laughter, and we went around imitating Monty for weeks after. Still, though Patton was a brilliant battlefield tactician and commander, he was controversial, ended the war in a less than spectacular manner over his use of known Nazis in German government, finally dying in a tragic car accident. Monty, also a brilliant military commander, went on to greater glory among his countrymen and admiration of the other Allied peoples.

I've gone on and on to make a point. You say "Stuff America" which offends me. Britain and America have traditionally been friends and allies after that "rathuh" sticky business in 1776-1812. Yes, we are

often brash, overbearing, and sometimes lacking in certain humilities which often create difficulties for those of who AREN'T brash and overbearing. Still, average Americans mean well, we ARE patriotic, and we don't mean to have people angry at us. As to Britain, lots of us, including me, have ancestry that goes far back in British history--that's where my family on both sides are from. You have an advantage on me; since my family is English/Scots, I can't say "Stuff England"! For many of us, "WE is you'uns, and you'uns is we'uns! LOL!

Actually, it's the same thing as scanner buffs "intercepting" cellular phone
conversations. Radio transmissions don't stop at a country's borders.
These aircraft are flying in international airspace (in spite of claims to
the contrary by China) and utilizing sophisticated equipment to monitor and
record radio and radar traffic. And China has no cause to get all huffy, as
they operate the same type of aircraft (purchased from some of our "allies")
in the vicinity of Japan, Tiawan, Korea, and Russia, also flying in
international airspace.

> > flys straight and level except when turning to

> They should try to stear away from any aircraft. They're a surveilance
> plane, they should've seen the Chinese fighter long before they had to
> make any sudden moves. They didn't.

First, international rules state that the larger/slower aircraft has
right-of-way over smaller/faster aircraft. Second, publicly-released
analysis by both military and civilian experts suggests that the Chinese

fighter was approaching the EP-3 from below and to the left, essentially in the EP-3's "blind spot", when the EP-3 started a banking turn to the left. The EP-3 "caused" the collision in the same way a guy making a right turn at a stoplight "causes" the collision if a car on the cross street runs the red light and hits him. As to their being a "surveilance" plane, the EP-3 isn't an AWACS-type plane, it's an ELINT (electronic intelligence) aircraft. And while the pilot of the EP-3 undoubtedly knew that the Chinese fighters were shadowing him, there was no way he could have known the fighter has coming up in his blind spot. Given the Chinese pilot's reputation as a "hot dog", he was probably planning on popping up suddenly and surprising the EP-3. At the same time, the EP-3 pilot may have initiated a turn away from the other fighter, which apparently was on his right, (just what you say he should have done) having no way of knowing the second fighter was fast approaching from below and to his left. In effect, the EP-3 was blind-sided.

> > Remember, military pilots train for formation flying.

> > > At least now the crew is on the way home and the aircraft is being stripped
> > > by the Chinese.
>
> Would you prefer they gave it back so it can be used to spy on them
> again?

International treaties, which the Chinese have signed, provide for exactly that. The aircraft is to be considered sovereign territory, the same as an embassy, and can not be boarded by the Chinese without permission from American authorities.

Finally, I'm sick and tired of people always making the Americans the "bad guys", no matter what the other side does. I'm not a "My Country - Right or Wrong" type of guy, but the crew of the EP-3 were doing exactly what they were supposed to be doing, in international airspace, and following proper procedure. The Chinese F-8 pilot crossed the line from "intercept" to "harass", and his actions caused the collision. He screwed up, and he paid the price.

I would like to tell you "If you haven't worn the suit, you don't know what you are talking about, so shut the F*** UP!", but in America, everybody is guaranteed by the Constitution the right to free speech, so you are free to say what you want. Just remember that the American military is part of the reason you have that right, these people deserve better treatment from you.

See this link for the CNN story about the collision between the Chinese fighter and the U.S. Navy EP-3. It now appears, according to the just released crew of the EP-3, that the EP-3 was flying straight and level, and the reckless actions of the Chinese pilot caused him to collide with the EP-3. THEIR FIGHTER RAN INTO OUR AIRCRAFT!!!

http://www.cnn.com/2001/US/04/12/air.collision.04/index.html

For those of you who choose not to believe what the crew of the EP-3 says, print this message, fold it until it is all sharp corners, and shove it up your *** where your head apparently is.

2250. Want a Scanner, Help me !!!

Date: 2001-04-13 07:59:31 UTC
From: Big Daddy <nalapombu@hotmail.com>
Message-ID: <3ad6b033$1_2@corp.newsfeeds.com>
Source record: 67089

I just borrowed a friend scanner to listen to. It is a Radio Shack Pro-51. I think that I have the bug and I want one of my own. I am a newbie here so I need advice from people who are experts, which is why I came here. I have read through a lot of posts here and a lot of the talk is over my head. I know that I will want a scanner that has capabilities that I may not need now but I will want in the future when I am more experienced. Here are the features that I would like to have:

1. Must be portable.
2. I want all the "action channels" whatever that really means. Police, fire, aircraft, etc....
3. I want a unit that I won't have to replace 6 months after I find out I want another feature or 2.
4. I want the most MHz coverage that I can legally get here in the US. I am not interested in cellular stuff, seems boring to me hearing about susies sore toe at school today or what the family wants from Hop Sings Chinese place for dinner.
5. I want weather info.
6. If possible I would like to be able to hear FM and AM radio. Please don't make fun if this is not possible to do.
7. What does "trunking" mean? I live in West Virginia and I am not sure that they use such a thing but I would hate to spend money on a scanner and find out that they were going to use it and not be able to get it in the future.
8. Do I need software to hook it to my computer? Seems unnecessary to me.
9. The most features that I can get for the money.
10. Limit of $350.00 new, I would be interested in a good used model from a reputable place or seller.

I know that is a lot of questions to ask here, but I am hoping that I have not overdone it. I figure that it is the best way to find out anyway, if you don't know you have to ask.
The 2 models that have been recommended to me are the Radio Shack Pro-92 (I think, it is the one with trunking and is $349.99) and the Bearcat BC-3000 XLT. When I look at the specs for each of them the Radio shack frequency list has ranges of frequencies and the Bearcat just lists an entire range that is covered. Such as the Bearcat lists 25-550 & 760-1300 MHz, while the Radio Shack model has basically the same coverage but has them chopped up and eliminates small portions of the range. Should I be concerned about that in the Radio Shack model? Is there anything in that range that Radio Shack cuts out that I will miss?
Any help that you all can give me here will be put to good use. If you have opinions on the ones I have listed then please let me know. If you have others that foot the bill or you think would be good for me then help me out on that too.

Thank you for your time and help.

Expect more of these incidents in the near future. Race riots will be commonplace in most U.S. cities within the next 5-10 years. All the evidence points to it.

This is precisely why I moved FAR AWAY from crime-infested jungles and resettled in a quiet, safe, rural area. I would strongly advise you to do the same, before it's too late.

International versus National. Spy versus surveil.

How do you "not let" another country spy on you from international airspace?
I'm sure the book of discouragement will have the chapter on crashing your jet
into a slow moving prop plane removed. The U.S. has and continues to have
problems with Russian trawlers, ostensible fishing boats loaded with
electronic equipment used to eavesdrop on the U.S. and to visually observe
ship movements. Using the Chinese rule, we should procure a number of speed
boats, and then sacrifice the speed boats by crashing them into the Russian
trawlers, attempting to sink them. Not really a good idea. The difficulty for
a free or Democratic society is that a certain amount of undesired activity
needs to be tolerated in order to assure that the Rights of the innocent
aren't trampled on. We have no reason to board Russian trawlers on the
"suspicion" that they are "Spying". We have ABSOLUTELY NO reason to board
Russian trawlers in International waters.

>> That's part of international politics, doesn't mean other counties
>> should simply let people spy on them, they accept it because there's
>> really nothing they can do to stop it.
>

If this were the case, a country would simply need to send up fighter jets
every time they discovered a surveillance plane in international airspace.
This way, the offending plane would instantly yield, and flee. One cannot
conduct credible surveillance if faced with such simplistic scenarios.
>>
>> They should try to stear away from any aircraft. They're a surveilance
>> plane, they should've seen the Chinese fighter long before they had to
>> make any sudden moves. They didn't.
>

I would prefer that they comply with International law. If your neighbor
suspects that you are monitoring his cordless phone calls, and you collapse
and yell to your neighbor for help, is he permitted to confiscate your scanner
when he is providing aid? I think not. The difference between spying and

surveillance is geography. (did you ever hear that the difference between brown nosing and ass kissing is depth perception?) If an individual has positioned himself within the country in question, this is an act of spying.

The U2 is a spy plane. (http://www.tjhsst.edu/ffair/lock/products/u20.htm)

The SR71 is a spy plane
(http://www.avsim.com/pages/0100/phoenix2/blackbird.shtml)

If an individual is postitioned outside the lands and waters belonging to a nation, this is surveillance. Since the plane needed to land on Chinese soil, perhaps a compromise would have been for the Americans to have permitted Chinese technicians to have entered the plane, and under the watch of the Americans, to have been permitted to assure that any data gathered as a result of the travel over Chinese property was destroyed, though I hope that all the equipment was destroyed prior to landing.

>
> 1. Must be portable.
No problem many are.

> 2. I want all the "action channels" whatever that really means. Police,
> fire, aircraft, etc....

Only a few scanners like the pro 51 have the preprogrammed service bands,
you will have to program your own frequencies for the area in which you live
for most scanners.
You miss a lot of action on those bands as many frequencies are not active,
anyhow.

> 3. I want a unit that I won't have to replace 6 months after I find out I
> want another feature or 2.

You are dreaming here, you will have several scanners as they are like
women, each one has different strengths and weaknesses, besides you can
listen to several at once!

> 4. I want the most MHz coverage that I can legally get here in the US. I
> am not interested in cellular stuff,
No problem with many new scanners, just look at the specs, they are
available at the manufacturer's website

> 5. I want weather info.

Probably any scanner you buy new can get the weather frequencies.

> 6. If possible I would like to be able to hear FM and AM radio. Please
> don't make fun if this is not possible to do.

Make sure the scanner can do that before you buy it, most cannot as music
really requires large speakers, on your portable scanners you have about a 1
inch speaker, do you expect to hear wonderful stereo music on that? Good
music boxes that have big speakers and play CD and cassettes cost about $50
now, much cheaper than a scanner.

> 7. What does "trunking" mean? I live in West Virginia and I am not sure
> that they use such a thing but I would hate to spend money on a scanner
and
> find out that they were going to use it and not be able to get it in the
> future.

Do a search on trunking scanners and learn about how it works, and find out
if the frequencies in your area are trunked, you may not need it. Get the
book "Police Call" at Radio Shack, and check out books on Scanners at your
public library, they will tell you the details.

> 8. Do I need software to hook it to my computer? Seems unnecessary to
me.
very few scanners hook up to computers, of those, some only program the
frequencies into the radio.

> 9. The most features that I can get for the money.

You will have to be the judge of thatl

> 10. Limit of $350.00 new, I would be interested in a good used model from
a
> reputable place or seller.

With that much money you should be able to get a new one. If you buy a used
scanner you will never know if something is wrong with it as you have
nothing to compare it with. Newbies are preoccupied with the parts of the
radio band that are not included on many scanners because they are not
generally used, until you get a full coverage scanner and try it a few times
you will not be convinced that you are missing out on something. Plus you
will learn that only certain intervals of frequencies are used, called
steps, and newbies are usually concerned with gettting every single
frequency even between the steps. After you learn more about it, you will be
content to have a scanner that gets the steps correctly and quickly.

Go to www.strongsignals.net
it's the best info on scanners on the web, including lots of newbie helps

No, I wasn't there, moron, I am using the information from published reports and from years of flying myself. The pictures of the aircraft support the report that the Chinese pilot flew under and into the EP-3. I don't buy things made in Communist China, if I can help it, because that form of government IS a threat to me, and to millions of other people on this earth. Perhaps if you would extract your cranium from your rectal orifice you would be able to realize that.

OK,

Thou O so wise diplomat and military tactician, what would YOU do
better?

Truth be known, those of us "armchair Generals" who weren't involved in
the action that brought on the crisis, nor the negotiations that brought
about the release, don't really know what we are talking about, now do
we?

Personally, I believe President Bush did as well as could be expected:
we got our people back, no shots were fired, and we didn't get into a
war.

Remember: China is our avowed enemy, sworn by the doctrine of their
communist ideology to bring down the Free world, and put us under their
domination. Perhaps you weren't around in the 60's when they were cal-
ling us "Paper Tigers"? They may smile and bow politely, but they are
STILL our enemy.

As to Clinton/Gore, their traitorous ways speak for themselves. They
are el pinko Socialists who will sell their own country down the river
(secrets to China), and having the morals of the animal kingdom--
actually the animals are BETTER because they weren't provided with a
"conscience." GOOD RIDDANCE!

Darn good question! Or why is the belt clip usually not with the scanner?
And why is the display scratched up? Is that cheeze whiz in the speaker
holes? It is cause some people are disorganized pigs.

I hate to tell you this but you don't steer a large plane such as the EP-3 away from fighters which are several times faster and more maneuverable that it is. Surveillance, from international airspace is not the same as spying, which is conducted covertly from within the country being spied on. There was no reason for the EP-3 to stray from it's assigned duties. Wang Wei's reputation as a maverick was supported this morning on "Good Morning America" when a picture, taken by a crew member on a previous flight, showed the Chinese pilot close enough to another aircraft that he was able to flash a sign with what was said to be his e-mail address on it. As to the aircraft, it doesn't matter whether they give it back or not. They have already stripped all of the surveillance gear from it for tear-down and study and we have others to take its place.

>Subject: Want a Scanner, Help me !!!
>From: "Big Daddy" nalapombu@hotmail.com
>Date: 4/13/01 3:59 AM Eastern Daylight Time

>1. Must be portable.

>2. I want all the "action channels" whatever that really means. Police,
>fire, aircraft, etc....

Most Police and Fire activity is covered on most scanners, Civil Air is on
quite a few and Military Air are on fewer but still enough to have a choice.

>3. I want a unit that I won't have to replace 6 months after I find out I
>want another feature or 2.

As a new user you should avoid going full blown untill you are sure you want to
invest a few ton of cash, but a good used unit can be had for $200-300 as you
posted.

Granted the high end units are feature packed but you may not need them.

>4. I want the most MHz coverage that I can legally get here in the US. I
>am not interested in cellular stuff, seems boring to me hearing about susies
>sore toe at school today or what the family wants from Hop Sings Chinese
>place for dinner.

Exactly.

>5. I want weather info.

NOAA is in the 162 MHz range which is covered on most units so no problem here.

>6. If possible I would like to be able to hear FM and AM radio. Please
>don't make fun if this is not possible to do.

I have the Pro-60 that will get WBFM which is this, AM is rare on low end units
but is available on some.

>7. What does "trunking" mean? I live in West Virginia and I am not sure
>that they use such a thing but I would hate to spend money on a scanner and
>find out that they were going to use it and not be able to get it in the
>future.

It is a shared radio system, managed by a computer, mostly in the 800 MHz range
but also in the 400 MHz range for the US Govt.
: See
http://www.trunktracker for more technical info.

>8. Do I need software to hook it to my computer? Seems unnecessary to me.

Not realy unless you get into scanning big time and/or advance in what you want to do.

>9. The most features that I can get for the money.
>10. Limit of $350.00 new, I would be interested in a good used model from a
>reputable place or seller.
>

For Reviews of Scanners see

Hi,

I was just wondering if you can play a Scanner
through a stereo,. Like you can play your computer
through stereo?.

Is it possible?, probable?, Can it be done,if so how?

Please let me know, Thank-You

Len

The NWS is soliciting bids for a state-of-the-art text to voice system for their weather alert radios through April 12th. And they are auditioning some new voices, you can comment on the various choices. It says it requires Real Player, but it worked fine with Windows Media Player.

ya, hook your headphone jack with RCA at one end, and a male headphone jack on the other to the stereo. Like a cd player, same thing for a car stereo, unless you have a tape deck in the car then you can get one of those portable cd player kits that let you hook up a headphone jack on one end and looks like a cassette on the other and stick it in your tape deck in the car. or just get one of those low powered fm transmitters that you can get a wall-mart or radio shack. but that would be considered as rebrodcasting and is illegal. but you could listen to it on any FM radio.

Yes there are several ways to do this:

1: Run a plug from the Headphone jack to the input on the stereo.

2: Use a CD Player Adaptor and plug it into the Scanner Headphone Jack and put the Tape end into the Tape Deck of the Stereo.

3: Use a Wireless Sender and tune the Stereo to that Frequency.

All the above options can be had at almost and Radio Shack or Electronics Shop.

If your computer's soundcard has a 3D enhancement mode for incoming audio, you might
run it through your soundcard first and get the added bonus of having your mono scanner
audio turned into a psuedo stereo spread, that way you can pick out voices and detail allot
easier
since the sound is spread out and gives both your ears sound to work on.

The Xplorer sweeps the range of 30MHz to 2GHz (including cellular) in less
than 1 second, automatically locking on any active FM analog frequency in
the nearfield and demodulating the audio. The two-line LCD displays the
frequency of the transmitted signal on one line. On the second line, the
display can be changed to indicate either All Mode Decoding of any sub
audible tones or codes(CTCSS,DCS or DTMF), relative Signal Strength, or FM
Deviation.

Besides the discriminator mod I don't know of any at the moment. You can do lots of funky things with it though, I have played with. turning on and off the light, and screen tests and that is about all, besides putting test frequencies in.

> No we 'ain't' ! Our future is with Europe, not with the
> WASP countries.

sadly, Jimmy forgot his roots and the new French Provinces
of Brittania, Pictia and Wales today April 14, 2025 were annexed
to Greater Europa. Eire was forced to take over the
Northern Counties. The Channel Islands were sold to Estate
Agent Developers who announced a new development consisting
of that peculiar North American style of housing called
"The Double-wide Trailer Park".

Bermuda applied to become the 52nd State of the USA but was
appalled to learn the Cayman Islands had just negotiated a Tax Haven
status with the USA Internal Revenue Service and the Dow along
with the Nasdaq has just relocated to the Capital City of
Georgetown along with all Major Money and Banking Houses of the
US.

Bermuda settled on accepting Rhode Island's offer to become a self governing county. The Falkland Islands are to be sold to the North American Sheep Owner's Association for use as a sheep farm. Should that deal fall through, The Falkland Islands has been offerred to Argentina but the deal is dependent upon paying USA Dollars, not Pesos for the Purchase Price.

Meanwhile, the Tapei Gov't has announced the acceptance of the PRC into the the Chinese Republic ending over 80 years of Civil War.

Poor Jimmy, cries to sleep because nobody came to his ANTI-USA Party since they were at the Consulate Offices trying to win a spot on the "I WANT A GREEN CARD" Show.

Points to ponder:
1. How come nobody jumps on an intertube and floats from USA to CUBA?

2. How come almost everyone wants to come to America?

3. Jim D. will be the only person teary eyed when Tim McVeigh assumes room temperature.

Hello,

Anyone with one of the new BC 780xlt running the computer control
software? Can you use a standard cable with db9 connectors on each
end or do you need a null modem connector?

I have the scanner..... I'm waiting on the trunkstar software to
arrive and thought i would try out the demo ver of the software along
with a cable I have here that is just a "regular" cable with two db9
connectors on each end.

Yes you can...
Just get or make an adaptor from your earplug outlet on the scanner to one of your stereo input jacks. Try a few different input jacks first though because some of them are a little more sensitive than others AND --- BE CAREFUL not to have the scanner turned up too loud when you turn on the stereo with the scanner plugged in OR you may do some damage to the stereo amp. Most of these input jacks are not made to take massive doses of watts or should I say milliwatts/millivolts.... Turn your scanner volume right down low and the stereo to about quarter volume (or less),, then slowly turn up the scanner volume, when the stereo is on, until you can hear it just a tad less than comfortable,, from here use the stereo volume only. This way you will avoid overloading the stereo input.
I have my (this) PC plugged into my stereo right now BUT it is done via the "correct" output on the soundcard and the input on the stereo. This is a balanced setup. I don't use the speaker outputs on the soundcard as I would say that doing it this way "would" do damage to the amp......

OH !!!! While you are plugging the devices together,,, make sure everything is turned off. Have you ever touched the centre connector on one of those plugs just as you plug it into the stereo???? You get this enormous HUMMMMMM that nearly turns your speaker cones inside out... I bet I am not the only one to do this.

To connect the radio to a computer you use a regular DB9 Male to Female
cable. To clone it to/from another 780 you need either a null modem
cable or adaptor.

I have played with several "radiocards".
They do not lend themselve to easy modification.
You could get an outboard MFJ SW converter, but the results are poor at best.
As for using the FM BCB for VHF/UHF "scnner" reception, forget it.
A FM radio has a very wide FM demodulator. So wide that even strong signals
like a local NOAA WX station is almost burried in the noise.
Given that thse $15 cards use surface mount components, it would be a real
challenge to rework one inot something usefull.
If your are really tight for money, buy a hand held scanner and see if the
hobby really apeals to you.
Good luck if you decide to go ahead with the modifications.

It doesn't automatically update the file when you make a frequency change. I waisted a bit of time on this myself.

You have to SAVE the file each time you make a change.

If you close the application without saving you will lose the change.

Uniden sells refurbished scanners for much less than new, and I've heard
that they
come looking and performing like brand new. You could effectively buy "more"
scanner for the money if one fits your parameters.

Depending upon what you mean as portable, the BC780 scanner does trunking and covers 25 to 1300 Mhz minus television and cellular. The 780 has alpha tags (best programmed by computer) and is a base/mobile unit. I have seen some who have made this unit totally portable by adding a 12V battery pack. It sales for around $350 or less depending on where you can find it. In my opinion this is the VHF scanner to have.

You mentioned weather. The 780 does weather with SAME alerts. Pretty slick. And besides doing trunking, it is an excellent conventional scanner.

Thanks to those who replied to this msg. I had a setting wrong on the
scanner.

Now I'm looking for a way to handle swg files. Would be nice to take
the dbf files from the percon database and then convert them to swg so
truckstar could use them... Any ideas on this......?

Found a software product called magic but I've not been able to fully
test it yet. Not sure if it does all the conversions....

Yeah, I gave up on Winscan too.
The COM port blows right in the middle of radio initialization.
Bad messages and stuff follows about the COM port.
Glad I didn't blow my money on it.
I see why it has been delayed as they still have not gotten it right.
They need to give up as they don't know how to program apparently.
Everyone else, even freeware garbage does its job and the com ports work.
Winscan is supposed to be the best and it's the worst.

well in the states it is illegal to just monitor cordlesses. but say if you were here. you would not be breaking the law when you overheard your neighbor on his cordless. except since you posted it here. it would be illegal. but he isbreaking the law cause he is talking about hearing you. that is the the illegal part. but I still should look up the fcc laws. but taht is how it would happen here. puch your neighbor out or pretend to have phone sex or something. maybe he is testing you to see if you were listening to him when he was saying that to someone else. hehe. But as above it is a real dilemma.

Laws aside.... You just found out about the down side of eavesdropping on
(was it a cordless phone?) your neighbors etc... You have to take the good
with the bad in this game...
Welcome to the "other" side....
It is now up to you as to whether you continue to do so or not....

As far as the law goes,,, I suppose it is different in every country. In my
country, it is not illegal to listen to whatever you wish. It is, however,
illegal to divulge, record, re-transmit or to take advantage of that info
in any way....

Don't totally disregard the law in your country but act upon your
conscience... You never know,, your neighbor may well be reading this
newsgroup too....
Happy listening.

Hi
To settle all speculation regarding my plight over the manual for the R10,
I had it given to me by the widow of my friend who has sadly passed on.
She has no idea whatsoever where the manual is. I expect it is in her home
somewhere, but there is no way I am going to pursue the matter. I think most
of you will appreciate my reluctance to ask the lady again.
I am going to contact Lowes electronics in england and see if they are able
to help, failing that I shall borrow one (and leave a large deposit, then
photocopy it page by page if I have to. thanks for all your help and
suggestions, I appreciate it
S

Na, listening to cordless phone is not illegal in the US, listening to cellular phones is another story.

As for Emilio, go to the neighbor and ask him about his listening practices. Tell him what you know, then sit a spell and jaw over a sip on some good old mountain squeezens. When all else fails, stop using your cordless.

I have the Trident TRX-100XLT That is surplus to my requirements, (I have 4 handhelds) this radio is approx 4months old, It comes with its origanal box,/ Ni-Cads batteries/ Charger/mains adapter/ antenna/ wrist-strap, it has far too many functions to describe here,
THIS RADIO IS UNBLOCKED and covers from 0.1Kc-TO-2200MHz with no gaps at all
for full specs and rich wells review take a look at
http://www.strongsignals.net/htm/trx-100.htm

I am asking ?120.00p UK for this, thats $172.40. US dollars, $269.31 Canadian dollars. I can provide excellent reference
Radio will be shipped on receipt of money order or cheque (cheque must clear) I will post it at my expense by air mail anywhere in the world.
regards
Roger
United Kingdom

You could have been a bit more specific about your post. After all,
there is alot that may be assumed about your post.

If you are a ham operator, then expect it. What the hell.. promote it!!
Get your neighbor interested if he isn't already.

If your not a ham, then maybe you could look into it, you might even
like it!

If you don't like the idea that you are going to be heard, then I would
suggest don't communicate with any means of transmissions..

Sorry, wrong. Cordless phone monitoring was added to the ECPA by amendment,
as prohibited.

2333. I think I have a Pro-94A

I just purchased a PRO-94 from RS yesterday.. the date code is 10A00.
On the back on the scanner model is 20-254 followed by in A in a box..
is this the "new" A version... If so any tricks to using this new model ?

Thanks, Steve

remember when a ham gets questioned on what he/she is doing, he/she gets
treated way different then if it was a scanner user. Say the cops come into
your house to question you, all they see is a scanner, They wonder why you
have a scanner. If though, you had a wall of ham radio equipment and a few
scanners, They ask how the hobby has been.
it is strange but it is very true.

Your correct, although I know police and fire persons who question any kind of radio equipment. I should know, I have been a firefighter and am a ham. So I got the worst of both worlds (sometimes). The main stem of the problem is that most of these professionals only see what they have via their radio. They don't comprehend the larger scale of telecommunications nor the laws dealing with telecommunications (i.e.., you can't have a scanner on our frequency!!!). And there are those out there who are terrified of what a person (like me) might know about them too. Hmmm makes you wonder what information can be had. So what if I have a ton of radios, antennas, scanners, computers, and the like. Its what I like to do and if someone doesn't like it, then talk to the hand cause I ain't gonna stop doing what I like doing...

Na Dev - I am in New Zealand.... They aren't that tough on those sorts of laws here..... Mind you, It's not as if we are the strategic capital of the world , is it????? Hahahahahaha!!!!
Same with computer laws,,, there really aren't any here. The government here are too busy putting on their makeup and powdering their noses to actually do anything serious.... It's a good deal as far as I am concerned.

I read a lot of radio magazines and in some countries, I can't believe that they are so ruthless with such laws... well, not so much the laws but if you get caught breaking them, especially in some of the European/Arabic areas/countries..... Hahah,, they take the fun out of living.
Cheers....

I agree with you. Lots enjoy scanning as a hobby, I used to be really into scanning, then I moved onto ham radio 4 in a half years ago. and I still do see the change. even in road blocks. I find lots of law enforcement and fire fighers are hams somewhere down the line or still are. I only know a few fire fighters and a couple of police radio techs. Still, if it isn't being used for illegal use, then let us all enjoy our hobby. it is those who blab crap off of what they heard that give us scanner users and hams a bad name. so the laws get passed in the US.
I was planning on moving to the states. but now I am not so sure. since there are state laws and government laws on scanning. I will stay in the free speech country for now.

Further to above...
Actually, I just looked at my scanner/receivers manual because I needed to find out something. As I flicked through the pages I caught a glimpse of the front and rear panels and something really caught me eye.
Guess what!!! My Yaesu VR-5000 has an audio "Rec" output,, just made for such a job. It has a constant output of 8 millivolts at 1 kilohm, and is completely independant from the volume control.
It may pay to check out the back of your own scanner(s) as it's far better to use one of these than either the speaker or headphone jack.

| I agree with you. Lots enjoy scanning as a hobby, I used to be really
into
| scanning, then I moved onto ham radio 4 in a half years ago. and I
still do
| see the change. even in road blocks. I find lots of law enforcement
and fire
| fighers are hams somewhere down the line or still are. I only know a
few
| fire fighters and a couple of police radio techs. Still, if it isn't
being
| used for illegal use, then let us all enjoy our hobby. it is those who
blab
| crap off of what they heard that give us scanner users and hams a bad
name.
| so the laws get passed in the US.
| I was planning on moving to the states. but now I am not so sure.
since
| there are state laws and government laws on scanning. I will stay in
the
| free speech country for now.
|
| Dev

Well it only gets better!! In the last post, I told you that I was a firefighter and a ham, I am by profession a radio service technician also. What else?? Don't ask.

2362. Speech/Frequency Inversion Descrambling!

Newsgroup: rec.radio.scanner
Date: 2001-04-15 12:35:10 UTC
From: ctpds49@aol.com
Message-ID: <20010415083510.11391.00000441@ng-ch1.aol.com>
Source record: 66901

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

The Shack still shows it on their parts list. It's catalog # 10538270 or NP part # AO123. Call 1-800-843-7422 to order or check on price. It shouldn't be much.

Source record: 66919

I have a Uniden Bearcat 895 XLT truck tracker. This scanner (as all scanner sold in America) have blocked frequencies. These blocked frequencies are of course the frequencies analog cell phones work on. I know it's possible to remove these limitations on the scanner. However I don't know how to do that. My questions are:

1 Can it be done with out irreversible damage to the scanner (IOW can it be "undone")
2 does somebody know a web page that gives information on these matters

Also I know there's software that can translate pager codes into readable text on the computer screen... Anybody have an idea where I can find such software.

Thanks

to my knowledge and looking at a few mod sites that I update on or others update on often. there is no mode for the 895xlt. closest was the 890XLT.

and pagers yes. but you got to build your own circuits. not for the people taht aren't good at soldering and stuff. the software is another story since it is hard to get nowadays due to US laws. all you can do is search cause I will not say where to find it. I am jsut answering your questions. hehe

2387. nypd 25-28-32 pcts freq?

Newsgroup: rec.radio.scanner
Date: 2001-04-15 21:32:09 UTC
From: Ed Ledner <eledner@erols.com>
Message-ID: <9bd3m2$94f$1@bob.news.rcn.net>
Source record: 66926

I'm just getting back into the great scanning hobby. I am able to receive
all the nypd freqs. from my home which is 50 miles sw of NYC. the only pct.
I cant seem to hear is the 25-28 & 32.
I'm looking at 476.6375 with a PL of 186.2. Even with the PL turned off I'm
still not getting anything. Did they change freqs?
Any help would be appreciated.
Regards
Ed Ledner

2388. Icom & Yaesu Receivers For Sale

Newsgroup: rec.radio.scanner
Date: 2001-04-15 22:08:59 UTC
From: Fred Allen <fallen-idc@worldnet.att.net>
Message-ID: <%ZoC6.2322$hH3.234479@bgtnsc04-news.ops.worldnet.att.net>
Source record: 66927

I have the following receivers for sale:

Icom IC-R100- Excellent condition, full coverage, includes box, mounting bracket, and all manuals. $525.00 shipped.

Yaesu FRG-9600- Excellent condition, full coverage, and comes with the optional Video Unit. Also includes box, manuals, and mounting bracket. $400.00 shipped.

I would also trade both units for a Icom IC-R7000 with the TV7000 Option.

Thanks.

Fred

2389. Metoer Pings

Newsgroup: rec.radio.scanner

They all use a metric pitch screw thread.
I took a screw from an old discarded VCR
(all metric) and soldered it to a section of
an old TV set whip, also discarded. Works
fine. If you don't have parts laying about
alot of the replacement antennas for cordless
telephone handsets work well too.

The 895 XLT cannot be restored for cellular monitoring.

> 2 does somebody know a web page that gives information on these matters

Your best bet is to find a pre-cellphone ban scanner at a hamfest
or on e-bay. do a search on "cellular scanner" on a search engine
and you'll find a couple of sites that list pre-ban scanner model
numbers. Then do a search for these on e-bay. I reccomend the
PRO-2006 if you can find someone willing to sell it. Expect to
pay more for a pre-cellular ban equipped scanner, but their out
there! They were several 2006's available at last year's Dayton Hamfest
along with some BC-200's that also are easily modifiable.
I've found Hamfests are a great source for such equipment, although
it may be a tad on the costly side from some dealers who are trying
to make some $$$.

When growing up I've always made in fun of those who live in trailer homes as my parents are strong conservative republicans
with loads of cash and taught us to be snooty and well mannered.
Well, despite them being loaded, I did things my way instead of wanted to walk in their snooty shoes.
I make a good living for myself but I understand why people would want to live in a trailer home.
It's cheap and it makes a great farraday shield. Right know that's what I'm seeking, about 10 acres
of flatland with no trees or anything, at a fairly high altitude for shortwave reception.
That way, I just anchor my premade home, ground it good, throw up a 100 foot electric telescoping tower and a pile
of antennas, get a septic tank and some solar panels and an electric generator when the power is low and presto, got
everything I'll ever need.

I suppose so, if you have a suitable beacon and the scanner can resolve ssb.

I've heard meteor pings on 28MHz . I was in communication with a station
across town, he was about strength 1. every so often his signal would ping
to s9+ for a few sylables and then fade back.

Brad.

yes you can hear the pings. but If I remember right they are below 20 Mhz
though. Just like you can hear Jupiter and Mars. since they transmit their
own manmade frequencies. I think lightning is around 7 Mhz or 4 Mhz. I don't
remember off hand.

My IC-R10 had the same problem. Hum from the DC charger caused severe distortion of SSB signals. The answer was to charge it from pure DC, not ripple.

Hello I am looking to buy a older hand held scanner. I have heard that the Pro43 is the most desired unit, in regards to its good pickup range and easy Mods as well as it functions. Is the Pro46 a better scanner? If the two scanners were lined up together which one would you buy? and for what reasons?

Thanks
Dimitri

Obviously, you asked such an open-ended question with the purpose of
letting peoples imaginations run wild, then checking the 10-20 replies
to see what people have said, then trying to make all of them look
like idiots. Such is the behavior of a troll. If it walks like a
troll, and talks like a troll, then by God, it is a troll.

You may say "I wasn't trolling, I was asking an honest
question". Such is bullshit, but even so, it is up to YOU to provide
the details, not up to the rest of the group to decipher the meaning
of your post.

If you really need attention that badly, then I suggest
calling your local news before jumping off a tall building.

Jason

None I have ever seen posted; and that applies for just about any type of Mod, though there may be some out there, just keep looking:

http://www.mods.dk/ has quite a few but the Pro 2014 is not posted there.

As for Cellular, most newer Pro's are near impossible to mod for that. BTW: The Pro-2014 does not get the 800 MHz band to begin with.

Well, we're not on EST now, we're on EDT, but 5:45 PM EST is 2045 EST - it's plus five hours to UTC from EST. From EDT, it's plus 4 hours, so it was 1945 UTC. What time were you really on??

As for why 43.385 MHz. This sounds like a combination of image and third harmonic. 13.615 on third harmonic is 40.845, that's as much as I cam figure out.

Hi!

I recently plug my scanner in my car stereo using the tape deck (CD car kit)
but I could only hear it from the left speaker. Is there someting I can use
to make it go in the right speaker as well.

Thank you,

Louis Bee

I remember some time ago, someone posting instructions for getting a Realistic 2026 mobile scanner to scan outside its frequency limits. It was some trick where you entered a search range, then searched past the limit and stored that new frequency in memory for starting future searches.

Would anyone happen to have those instructions? I saved them somewhere, but can't seem to find them. I recently found an old but really nice pro-2026 and would like to get it to pick up CB frequencies.

yes. by a stereoto mono adapter plug. It looks like the exact same headphone plug. but it will convert the stereo to mono. Most scanners onlu have a mono headphone jack, so you need a mono adapter. :)

>

yes it is, and I dont know of any 'tricks' to using it, I pretty much went by
the manual, when I finally got it from RS. Didn't have one with the unit when I
bought it. At first I used the manual from a neighbors PRO 91. It's funny, that
they are virtually identical, with minor differences according to the model.
There are still some paragraphs pertaining to features that don't exist on the
94.

sorry, felt chatty today.

You cant get a scanner that can hear all frequencies :)
Frequencies go extremly low, to extremly high (15gig +)

Most scanner's frequency range is from 25khz to 850 or 900mhz

Check out tandy/radio shack for some scanners that will suit your needs..

If it is speech inversion scrambling you might be able to un-scramble it by putting the scrambled audio through a Cb transmitter set to either SSB or AM mode. Ramsey used to offer a unit to de-scramble audio, but I don't know if they still do. There are other companies that offer similar products however. Punch it into a search engine.

there are two versions of software too. invert.exe and invert2 . the Invert2 is much more in debth and better then the invert.exe, just need a sound car. and a line or mic in. witht he record settings set. then the wave output disabled. invert.exe is a small file. invert2 is about 900k.

I don't think so. Seems to me it would be easier to purchase a scanner
that has that coverage to receive those. Like Bearcat
3000xkt,9000xlt,Pro 2004,2005,2006,780xlt,Pro 26,etc....

Yup, any scanner can be modified to receive any signal, problem really
is - have you got the greenbacks to fund such a project. It'll
probably be cheaper to buy a scanner that is already designed to
receive HF signals.

I understand that it is on the Cellular Service Band: 824 MHz to 894 MHz.

To unlock or do any number of remote functions is a simple matter of sending
the correct code to the Rx unit.

Most scanners are automatic for the section you are scanning, though some units
let you set the step.

Palm Beach Scanner FLA,USA.

Thanks for reading my post... I'm doing my spring cleaning, and need to make room... Please e-mail me if you have any questions.

Sony computer programmable scanner, 1 year old. 300 channels, preprogrammed band & service group search. Very good to excellent cosmetics, and works like new! Comes with box, manuals, cable, AC adapter, ear phone, CD, and belt clip. It hasn't been modified in any way. I just don't use it enough to justify keeping it around...

Asking $150, including Priority mail shipping.

No offence but what sort of request are you making here....?
Under the heading of...
"WTB: R-9000 Owners Manual"
comes...
"Please no copy. State callsign which must match data base. KENJD at msn
dot com"...

Personally, I am not sure what you are asking for...
1.. An original of something
2.. A Ham radio callsign for someones' database
3.. A reply to a Ham callsign

You "can" be a little more explanatory you know... It doesn't cost you any
extra...

If you are after an R-9000 receiver owners manual then why not try Icom -
If you can afford one of these sets then a few bucks more is not going to
bust you. Not many people own these super receivers (you lucky so and so)
and I bet they want to keep their manuals... In my country the owners
manual for the R-8500 only costs $10 which equals $5 US. I am sure the
R-9000 manual wont cost much different...
Good Luck.......

Source record: 66807

I don't think you can modify a scanner to pick up CB freqs. The AM mode is not too common on scanners. I dont believe the scanner can be modified to do that but you can buy a scanner that recieves those frequencies.

2470. Replacing NiCd cells with NiMH

Newsgroup: rec.radio.scanner
Date: 2001-04-18 02:22:03 UTC
From: dm7@ZhomeZ.com
Message-ID: <3adcf9ad$0$32069$45beb828@newscene.com>
Source record: 66809

I have a Uniden BC200XLT handheld scanner with a 7.2v NiCd battery pack that no longer holds a charge. The battery pack (BP200) holds six AA-sized cells wrapped in plastic to form a single 7.2v package. I was thinking of replacing the NiCd cells inside with NiMH cells.

The battery pack also contains the electronics for charging the cells using 12v external power. The circuit board contains a 3-prong component labeled L4810CV (voltage regulator?), 2 diodes, two resistors, 2 capacitors, an LED and the external power connector.

My question is this... is it okay to simply replace the NiCd cells with NiMH cells of equivalent voltage? In other words, are there any critical differences between charging requirements for NiCd and NiMH cells that might be a problem?

All PRO2006's had a similar gray plastic case with white printing,
silver framing around the display, silver knobs and switches, off-white
rubber buttons and some blue trim. The only cosmetic differences between
versions was the labling on the light switch. New versions had "Light"
older had "Dimmer".

If you are seeing radically different photos they may be versions built
for different markets or with different brand names (ComTel ?).

2478. Re: Replacing NiCd cells with NiMH

Newsgroup: rec.radio.scanner
Date: 2001-04-18 03:25:22 UTC
From: Roger N <regor@onemain.com>
Message-ID: <tL7D6.964$lp4.375113@nntp1.onemain.com>
Source record: 66818

NiMH batteries are more sensitive to overcharging than NiCads. If you run them down until you get a low battery indicator, then charge them for about 1-1/2 times as long as your instructions say to charge your NiCads (they are about 2X the capacity, 1-1/2X charge should still be undercharging), it should work fine. Some chargers use peak detecting, NiCads have a more pronounced peak than NiMH so it's not recommended to leave a pack on long enough for it to peak unless the charger is designed for peak charging NiMH batteries. Hope this helps.

Source record: 66817

Anyone have a site that compares the main differences between these two pieces of technology heaven?

Does the 780 have better PC control than the 895? What does the extra $$ for the 780 really get me? The 895 looks more solid and costs less, plus the volume and other controls are better situated on the front panel.

The number of channels don't interest me. 300 is plenty for me. Should I fork over the extra cash for the 780? Please help.

-Scooby Master

Go to Radio Shack or any electronics store and get a mono to stereo converter. Make sure both are 1/8 inch. It'll have a mono plug one end and a stereo jack hole one the other. Hope this helps. Eric KA6USJ

P. S. I do it that way myself

Maybe you are equating "blocked frequencies" with interrupted
coverage.
US scanners in recent years have had analog phone frequencies
electronically barred because, there, it is illegal to monitor them.
Cheaper scanners only come with certain parts of the spectrum
available......to do with the cost of manufacture. Like, the more you
pay, the more bands you get. Most better scanners on our market will
receive on all bands in the "normal" communications spectrum.
However...if the original enquirer was referring to the 900 GSM phone
band, he/she can forget scanning it whether or not the radio receives
on the band. Unless, of course, he/she has friends in the upper
echelon of a major national security service......transmissions are
digital, and, I believe. encrypted. Just so people like us can be
pissed off :)
And, IMO, if a manufacturer does come up with a digital scanner, the
rules will change while your head spins. Frankly, I think the big
Telcoms will buy the technology to keep it off the market before we
hear about it
Wish I had the skills.....would be worth millions.

My AOR8000 receives them and AM no problem. But if you have a scanner that doesn't how about this idea got to local discount store (KMART, Wal-Mart etc..) and but a cheap handheld CB radio. I got a Cobra on clearance for $20.00 and does double duty as CB backup in Jeep.

I don't agree Roger....NiMh cells DO NOT like over voltage and many of the NiCad charging circuits are nothing more than current limiters. It's a fact you can charge NiCad's with ANYTHING as long as you do not go overcurrent. This is not the case with NiMh. Without knowing just how/what the charger is in the radio I would just replace the tired NiCad's with new ones. You will notice that the newer chargers (like radio Shack) have a switch for current/current & voltage sense on their chargers....Eddie

Damn. I will have to stop selling radio systems that go to 50 Ghz, or laser systems that operate at Terahertz then!

My scanner covers to 2 GHz. But what's the point - I've yet to find anything above about 900 MHz that is using a single voice channel that can be listened to (apart from ham band around 1.2 GHz). Everything up high is broadband multiplexed stuff using megahertz bandwidth that just sounds like data if anything at all. Why they bother making them except to make the specs look good is beyond me.

I assume the "list" your referring to is this "USENET newsgroup"
(rec.radio.scanner)?

This is a "newsgroup" not a mailing "list". It's a bulletin board we all post
messages
to.. follow-up to... etc.

I recall, AOL has there own USENET news reader (barf), you'll need to ask AOL
how to update their newsreader with your new EMAIL address.

In any event, good luck! Talk to AOL.

I own the 780 and the only things I found was:
1. there is for the most part NO customer service support from Uniden
2. the manual that comes with the 780 doesn't address some of the
operating modes
3. the 780 is 1/2 the size of most other scanners
4. the receiver seems a bit hotter, ?
5. the 780 covers the motorola most up to date trunking system
6. small enough for the vehicle

I don't use PC controls, I enjoy the hands on system. If you just looking
to keep up with the neighbor, save your money. I own the BC-9000, I sat
them side by side and they operate the same. I don't use trunking in my
area.

What ever your choice, enjoy scanning....

UPDATE!!!

USA: KSMR Disappears
By Hans Johnson, Cumbre DX, and Nick Grace C., Clandestine Radio Watch
Clandestine Radio Watch 65 Extra, March 24, 2001

[Mar 24] After weeks of broadcasting, KSMR - Kentucky State Militia (KSM) Radio - disappeared on March 21st.

Although the reason for the disappearance cannot be confirmed, CDX- CRW received a report that the KSM ordered an immediate end to the station`s transmissions earlier this week. The KSM, however, did not respond to a inquiry asking them to confirm or deny this report.

CDX-CRW have also learned that the operator of KSMR, 'Major' Steve Anderson, may possibly return to the air with a new station. This operation may be a militia-supported station, but may have a different callsign and fewer, if any, ties to the KSM.

Hi all, just a short question...

I have an AOR 8200 with a lead so I can control it via computer
software.

My question is can I use that lead to run ACARS rather than plugging into my
sound card ???

The only two ACARS programs I know of require the soundcard
to do the decoding.

You don't have to use the extension lead. Take the soundcard
input from the earphone output on the scanner. You don't need
a discriminator output for ACARS as it's AM.

I found one link that is analogue multiplexed at 1.4/1.5 GHz, and with real careful tuning in SSB I could make out what was being said, but this link would have to be the exception. As Richard points out, there ain't much above 1GHz that is voice that can be listened to and understood.

Back to the topic at hand, with the title of 900 MHz scanners, what is there that can be heard anyway?
GSM mobile phones? I don't think so...
Some analogue links - if you are in the line of the link or close to one end - yep.
digital links - nope.
I can't think of much else that lives around that area.
Lower at 800 MHz you will find trunking systems which would probably be the most interesting to listen to, and more analogue and digital links, and CDMA phones.
This info is applicable to Australia only...

And what Richard says about radio at 50 GHz or laser comms is nothing to be laughed at - they really do exist and are in common use. The Nokia Metrohopper radios operate somewhere around the 50 GHz band (microwave links, not suprisingly very short range) and there is a laser based comms system (forget who makes it, Alcatel was it?) that works until it rains....

Thanks for the replys.
What kinda of scanner sould i get so i can listen to interesting stuff?
I want a cheap one too, used or new?
Thx.

I am not sure I agree with this tactic, if that's what they are doing.

OTH, I am a retired railroad employee, and I'd like to ask something. Have you ever sat in the cab of a mainline passenger train watching someone racing you to the crossing? Have you ever known what it is to realize that there are babies and small kids in that car, and the feeling of dread that engulfs a train crew during those few seconds before crushing that car--or narrowly missing it by inches? Literally inches? Have you and your fellow crewmen sat and cried because you just hit a car and wiped out a family and it wasn't even your fault? To the engineers and head end crew that hits a car, it is a HORRIBLE experience. I HAVE experienced these things, and if YOU could see it from MY point, you wouldn't even complain about it. On second thought, I DO agree with it. All those people get are a ticket. They are still ALIVE! What if that same car drove around the gates and into the path of a train? Do you think 3-4 minutes are worth YOUR life? Well, it's not! Trust me, engineers see this many times during one trip--cars ig-noring bells, lights, and gates and have many near misses in just one trip! And it's hard on a body, I tell ya! Trains cannot just slam on brakes and stop like a car. Indeed, if one slams on brakes (we call it dynamiting the air), it is possible to derail the train--and you STILL will hit the car!

Going around crossing gates is against the law and it is so for a very good reason. STOP! LOOK! LISTEN!

For some reason, WinScan just doesn't want to work very well on my Compaq Presario 7000 running Windows ME, but the ScanStar demo works just fine. I don't like ScanStar though because it's a 16-bit application and it's too expensive. When was the last time the ScanStar people made an update to that program?

Is WinScan just plain incompatible with Windows ME or something?

What you're saying sounds right to be but if your batteries are discharged before you charge them, and you don't leave them on too long, they won't get over voltage. The current limiter will drop any over voltage that the source might have. The only way to get this over voltage to the battery is by over charging it or having a bad pack. Most Nicad slow chargers charge at C/10 and recommend that you charge for 14-16hrs, if you replace these batteries with NiMH with twice the capacity, the charge rate becomes C/20, which would take a 28-32 hr charge. If you terminate the charge after 20-24 hrs, the batteries will still be undercharged and under voltage but will last longer than batteries (NiCads) charged for only 14-16 hrs. From the studying I've been doing for over a year now (I'm developing a computerized battery charger) NiCads and NiMH are charged with constant current, Lithium and Lead Acid are charged with constant voltage. Since it's easy to forget about something charging for 24 hrs, and since NiMH don't tolerate overcharging as well as NiCads, it may be best to use NiCads, or use a wall timer on the charger, or use a NiMH charger for the pack (If it's convienent to disconnect the pack). Some of the battery manufacturers have websites with charging recommendations for their batteries. I don't have the links anymore (computer lost my bookmark file!) but Panasonic and Sanyo both have NiMH batteries I believe.

Hello all, I just downloaded and ran a DOS program called "KRACARS". It uses the audio output from a reciever, via an audio cable running to input to computers sound card. The program is free and works very nicely. One question though: Most of the text on screen is "coded" and there is some plain text. I thought acars transmissions were supposed to give MORE DATA!!!! Like amount of fuel on board, number of passengers...etc. It is my first taste of acars and would like some feedback on what others think...thanks for your input.....bob

I just got into a new house and want to put up a couple of antennas for use with may AOR 8000, RS DX-398 and coming soon Uniden 780. I have narrowed down selections to either a Nil-Jon wideband antenna or a Diamond Discone. For SW use I need suggestions as I am not 100% sure, I do not want a 200' antenna draped all over the place. What is a good compromise? I plan on installing it on the roof (laying down??) for aesthetics sake.
Your comments are much appreciated.

Episode # 1 now showing for your viewing pleasure at:
http://www.RattyOShack.com
Ratty O' Shack is my comic strip about an alien from the planet "Teck-nul-ogie", who arrives here on earth thinking he has cloned himself to look like a human.. only to find his physical replicator device didn't do such a good job. He must now fit in with human kind until he can return home... but before that, he must survive using his superior brain power and anything else... such as pure luck... to get him through each day. Follow his Adventures, which should prove.. very interesting.

This is the much sought after international version of the AOR AR-8000 Handheld Wide Range Receiver. The AR8000 is one of the best radio frequency scanners on the market today with frequency coverage from 500kHz to 1900MHz and remember, this is the international version so virtually nothing is blocked. 50 Channel x 20 Banks (1,000 channels) for memory * Tuning is in 50Hz steps * All-mode reception for AM, USB, LSB, CW, NFM and WFM reception. * USB/LSB/CW has a 4.0 kHz SSB filter. * Scan / search rate is 30 increments / second. Unit is approximately 3 years old and in excellent condition with no signs of wear. It comes with its original instruction manual, telescoping BNC antenna, power supply, thick leather carrying case(was never removed from except for new batteries).

Selling it cheap, need the money. Only a couple of hours left.

Plenty of Satellite Communications available..... GEOS, INMARSAT (lots
of analog voice on inmarsat) etc..... The rules change slightly
though in that most microwave signals need specialized antenna's and
pre-amp.

Thanks for the advice.

The voltage on the battery leads with the old batteries removed
is about 9.5v, which works out to about 1.6v per cell.

Would it make sense to try and lower the voltage in order to
protect from overcharging? If so, what would it take to build a
simple charging circuit?

i remember i had a problem like that when i was using windows 95 i had to
download some patches off of pozilla web site
and it still didn't work so i got a new computer with ME pre installed did you
upgrade to ME from an earlier windows

After good research, I found out how I am to alter my scanner to allow remote pick up the scanning guns like in shopping stores. I can see all the prices of products as they are when rung up by the cashier.
I simply also see interesting information about purchased items.
A lot of stuff which is you probably buy.

You have not considered how very much prices are bogus.
Several Pet foods are wrong.
I've made a couple of women to be friends because as they as women walk out, I walk by and show them an item in their cart is marked simply wrong. They each thank me, and 2 of them have agreed to have my accompany them to their car.
As they speed away, I thank my scanner. I hope one day I too will meet someone I can trust , to let tell my little "secret". Maybe we'll be close.
One time the idiot cashier rang up 26 items for double the price. I informed the 10 year old and she got her mother and she got about 15 dollars but i had to leave . I hope you are interested. I have informative instructions.

> simple charging circuit?

If you have access directly to the charge leads, you can either buy a charger or you could make one from chips at http://www.maxim-ic.com/ . Look up battery chargers and look at the circuits they show, when you see one that you like, you can check the part pricing and availability at Digikey.com .

If it were me, I would either try to only charge for 24 hours after the low battery indicator came on. If you're afraid you might forget to take it off charge, you could get one of those plug in timers and set it to shut off after 24 hours or so.

The 1.6V per cell shouldn't be any problem, the charger I'm designing will be able to charge a single cell from a 24V source, that's 24V for one cell. The way it works is by switching the power on and off real fast through an inductor, that way, even though 24V is available, the battery in the circuit and the current limiting only supplies 1.6 or so volts to the cell. The charger I'm working on will be able to charge from 1-12 cell packs from the 24 Volt source (which is stepped up from a 12V wall wart or 12V auto/motorcycle battery).

Mr Goldstien,
I must admit, I am perplexed on many things you have posted in the past including this one. First, how do you manage to come up with such ill pieced information and pass it as factual? And second why do you insist on posting these useless tidbits of mis-information. How do you justify telling people they are informed when you elude factual evidence. Did you hear this one over your scanner from your neighbor too? Or are you using your scanner to play the "Price is Right?"

And now folks, the big question ... what the hell am I doing posting to this message???

I went to RadioWorld, The other day to buy a simple
5-pin/din Mic, for my TRC-216 (40 Ch C.B.) {Yes I know this is a Scanner Newsgroup}..

I called before I went, and they said yes that they have
a Mic, that would fit My TRC-216, I took the C.B.
[It's a Walkie Talkie/Hand Held] to show them what I needed the Mic for.

So I went there to buy the Mic only to be told by the
Manager?, that they didn't have a Mic for My C.B., Told Me to go to Radio Shack, So after I looked around the store I found a 5-pin/din Mic, that looked
liked it fit my type of C.B., I ask the store Manager if
this would fit My C.B.and the CLOWN said no it would not work in my CB.. So I left and went to Radio Shack, and guess what!, I found a Mic that works in My TRC-216 CB, The Radio Shack guy was very helpful, knew what I wanted.(One Very Happy Customer, Me). From now on I will only deal
with Radio Shack.

So in clossing I Would Like To Say PLEASE! Don't go to RadioWorld in Toronto,Ontario (Canada)

RADIOWORLD = BAD SERVICE!.

Warning Don't Go To RadioWorld!!!!

Thanks for reading My Rant.

Wireless Technology: They'll Know Where You Are
NewsMax.com
Wednesday, April 18, 2001

Wireless communications may be the wave of the future, but your privacy rights could be the victim of this burgeoning technology.
Calling 911 on your cell phone will tell police where you are, for example, and new technology will allow trackers to pinpoint your location within a few feet.

According to Federal Communications Commission rules, wireless telecom carriers must build into their systems the ability for police to locate anyone calling 911.

But that's just the beginning. Under the so-called Communications Assistance for Law Enforcement Act of 1994 (CALEA) police are given the authority to track the locations of any cell phone users even if they're not dialing 911.

Add to that Lucent Technology's soon-to-be-released system that will allow those using the new technology to track the locations of cell phone users to within a few feet, and you have a whole new threat to individual citizens' privacy rights.

Given the ability to accurately pinpoint cell phone users' locations, for example, wireless providers will be able to use their systems to exploit that ability for commercial purposes, ecompany.com magazine's Startup feature warns.

Even though users would be given the opportunity to have their phone numbers removed from the calling lists of individual advertisers, they would still be subject to being harassed by unwanted calls and would have to go to the trouble of notifying the callers they want their names deleted from their lists.

A hopeful sign: A bill awaiting action in Congress would criminalize the transmission of unwanted commercial calls to cell phones or other wireless devices without the express written consent of the wireless device's owner, Startup reports.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this
article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire

engines, ambulances, airplanes, armored cars, trains, taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a

personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. http://www.grove-ent.com

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC780XLT, BC895XLT, BC245XLT, SC200, and Radio Shack PRO-92 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for

extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises http://www.grove-ent.com for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's

book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises
http://www.grove-ent.com but views expressed in this article
are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine, published by Grove Enterprises, http://www.grove-ent.com

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't

interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large

Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack store. Each Radio Shack store has a book containing frequencies and stock numbers. The crystals are mailed to your home within 10 days.

You can also order scanner crystals from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 941-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated

circuits. The radio must have been made after the most recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature

(logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two

BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, http://www.grove-ent.com
but views expressed in this article are his own.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)

25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2001 - ILLINOIS
last updated April 4, 2001 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Ralph Zancha, and ARRL for providing some of the information.

APRIL 2001

Apr 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM.

Apr 1 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Apr 8 (Sun): Tinley Park, IL - Giant Computer Show & Sale | (see below). Tinley Park Convention Center, 185th St. & | Harlem Ave. 9:30 AM - 3 PM. |

Apr 21 (Sat): Orland Park, IL - Giant Computer Show & Sale | (see below). Orland Park Civic Center, 147th St. & Lagrange | Rd. 9:30 AM - 3 PM. |

Apr 29 (Sun): Arthur, IL - Moultrie ARK. 8AM - 1PM. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937. Daytime phone 217-543-2178 evening 217-873-5287. Email: rzancha@one-eleven.net Or write to M.A.R.K., P.O. Box 91, Lovington, Illinois, 61937.

MAY 2001

May 6 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

May 6 (Sun) - Sandwich, IL - DeKalb Hamfest. Sandwich Fairgrounds (intersection of Suydam and Gletty roads). 8AM - 1PM. 3 indoor buildings. Admission $6.00. No VEC testing. Talk-in on 146.730/- or 146.520. Info: W9ICU at (815)895-3310, email w9icu@home.com. http://tbcnet.com/~jleonard/hamfest.htm (small to mid-sized hamfest. Nice drive in the country. Good restrooms. -AJ9S)

May 27 (Sun): Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell, Chicago, IL. 8

AM - 2 PM. setup at 6 AM. Indoor/outdoor flea market. Free parking. Tickets $5 at the door. Outdoor fleamarket space is free. Indoor table space is $1.50/ft. Info: George (773)545-3622 or Dean (708)331-7764 or write to CARC, PO BOX 410535, Chicago, IL 60641-0535.

JUNE 2001

Jun 3 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Jun 3 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: tel. 1-815-856-3773, (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 10 (Sun): Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. 2015 Manchester Rd (north of Roosevelt Rd, east of County Farm Rd). Gates open at 7 AM, buildings open to public at 8 AM. Admission $6. VE testing. Talk-in on 146.52 and 146.37/97 (107.2 Hz PL). Info: http://cyberconnect.com/orion/hamfest.htm or contact Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 708-442-4961 . Email: wa9rij@mc.net

JULY 2001

Jul 7 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Starts at 6 AM. Talk-in 146.52 MHz (WA9TXE). Info, call (414)762-3235.

Jul 8 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz repeater. http://www.w9az.com. Admission $6. Info: Chip Moore, K9IOC, 289 S. Euclid Ave., Bradley, IL 60915. Email: karsfest@yahoo.com

Jul 15 (Sun): Washington, MO - Zero Beaters ARC Hamfest. Bernie E. Hillerman Park (Washington Fairgrounds) Free parking. Free admission. VE exams. Talk-in on 147.24 MHz repeater. Info: Keith Wilson K0ZH (636)629-2264, fax (636)629-1196. Bob Goza W0BOB (573)484-3718, w0bob@arrl.net. http://www.yhti.net/~w0bob/zbarc

Jul 22 (Sun): Sugar Grove, IL - Fox River Radio League Hamfest. Waubonsee Community College. Rt 47 at Harter Rd. Admission $5. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2001

Aug 5 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Aug 12 (Sun): Peotone, IL - 67th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $5.00 in advance with double stub, $6.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Robert Nelson, WB9FWR, 1720 Vollmer Rd., Flossmoor, IL 60422. (708)756-7984, email WB9FWR@aol.com. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 26 (Sun): Joliet, IL - Bolingbrook ARS Hamfest. Inwood Recreation Center, 3000 W. Jefferson St (Rt 52). Outdoor flea market setup at 6 AM. Admission $5. VE testing. Talk-in 147.33+ MHz and 224.54- MHz repeaters Info: Tom Ballard N9LJY, (630)739-3740. (Small to midsize hamfest with good restroom facilities - AJ9S)

SEPTEMBER 2001

Sep 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Sep 14 - 16: Peoria, IL - Peoria Superfest 2001, Peoria Area | Amateur Radio Club. Exposition Gardens, Peoria, Illinois. | Amateur Radio, Computer and Electronics Show. Friday Flea | Market Preview--3 PM until dark; Live Music Saturday night | in the South Garden Pavilion; FCC Testing Sunday 10 AM until | 1 PM; Gates open 3 PM Friday and 6 AM Saturday and Sunday. | Commercial buildings open Saturday 8AM until 4:30 PM and | Sunday 8 AM until 3 PM. Advance tickets $5 with two stubs; | $7 at gate with one stub--all tickets good for the weekend. | Outdoor fleamarket space can be reserved in advance for $5 | plus $5 for each admission ticket. Space and admission | tickets are good for the entire weekend. Setup: Outdoor -- | Friday 10 AM and 6 AM Saturday and Sunday. Indoor Commer- | cial Vendors -- on Friday 2PM until 9 PM (setup only), = | Saturday 6:30 AM and Sunday 7:30 AM. Talk-in: 147.075+. | For more info, see http://www.w9uvi.org ; e-mail for tickets | and space reservations to w9uvi@arrl.net ; USPS mail to | Peoria Superfest, PO Box 3508, Peoria, IL. 61612-3508. |

Sep 22 & 23 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Admission $8, good both days. Ladies program - Arts and crafts. Grounds open Thursday at noon. Flea Market open both days at 6 AM.

Exhibit buildings open Sat 8 AM - 4 PM and Sun 8 AM - 3 PM. VEC testing. Free camping and parking. Talk-n on 146.16/76 MHz (107.2 Hz PL). Info: http://www.chicagofmclub.org. Tel: 630-628-1501 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 2001

Oct 7 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

NOVEMBER 2001

Nov 4 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. No tailgating. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 4 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

DECEMBER 2001

Dec 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Tinley Park Civic Center, 185th St. & Harlem Ave., Tinley Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. for adults and children under 12 get in free. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held monthly from 9:30 AM to 4:00 PM. Admission is $6 with free parking. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Held in the Ballroom of the Holiday Inn, 6161 W. Grand Avenue, Gurnee Illinois. For info, visit the web site at http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 2001 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024. Grove Enterprises http://www.grove-ent.com occasionally sells manuals, too.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this article
are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable

Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and
MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner
Apr 2000 - Understanding Intermod,
(comparison intermod performance of several models)
May 2000 - Radio Shack PRO-94 portable
Jun 2000 - Radio Shack PRO-2052 trunk tracking base scanner
Jul 2000 - Electra Tiger Scan TSA portable
Aug 2000 - Phone patches; Identifying scanner crystals
Sep 2000 - Radio Shack PRO-2067 trunk tracking mobile scanner
Oct 2000 - ICOM IC-R3 portable wide band scanner
Nov 2000 - AOR AR3000A wide band receiver
Dec 2000 - Alinco DJ-X2T portable scanner
Jan 2001 - BUTEL ARC2 Software for the ICOM IC-R2
Feb 2001 - RT Systems ADMS-3 Software for the Yaesu VR-500
Mar 2001 - Uniden BC780XLT Trunk Tracker III
Apr 2001 - AOR AR-8600 Wide Coverage Receiver

Note: Reprints of Monitoring Times articles are available
for $3.00 each plus a self-addressed stamped envelope from
Grove Enterprises, 7540 Highway 64 West, Brasstown, NC
28902, tel. (800)438-8155. http://www.grove-ent.com I don't
receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.

Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features

than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies

found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search

limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117

VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given

frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather

alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There

three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility

not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:

Ya one of the new owners are rude. but remember they are ham radio and scanners. they may have some CB's, but they treat you diff cause you are not a ham. If I deal with them. it is off the phone and jsut thru the mail. I would never talk to them. the old owner was nice. but when they joined with atlantic Ham radio. it is going downhill. I just will not deal with them in person..

Message-ID: <9bnf7d$7vm$0@216.155.62.134>
Source record: 66792

Hi All,
Man, what a bad day I had. Let me try again. 5:45 PM EST is 1745 EST.
We add 5 hours and get 2245 UTC. 5:45 PM EDT is 1745 EDT. We add 4 hours
and get 2145 UTC. My mind was in neutral when I wrote the first reply!!!
Jerry was correct with his letter.

Sorry, and 73

Jim KR2T

HI Dean (sorry for replying here, my ISPs email server has gone wierd again!)
Australia is fortunate in that there are no laws that force scanner manufacturers or importers to restrict the ranges that they can receive. It is only illegal to intercept any type of telephone communication, but this is becomming less of a problem these days - all mobile networks here are now digital, and the only thing you could listen in on would be two way radio phone patches or old analogue cordless phones (and even there are being replaced by digital versions now)
The Australian newsgroup for scanners is: aus.radio.scanner.
There are plenty of Australian scanner web sites - use the websearch engine Anzwers to search in Australia only to get started, of course this wont trap any sites that are hosted off our fine shores.
One web site that I have helped out with is www.geocities.com/ch8users/

Source record: 66699

19APR01 - 2116-2119Z - 145.800 heard ISS on voice working voice contacts, commented "everyone is stepping on everyone so Hello from the Space Station". Signed a callsign of NA1SS several times?

NA1SS
INTERNATIONAL SPACE STATION AMATEUR RADIO CLUB 1
2140 EDGEWARE STREET
SILVER SPRING MD 20905-4215

Nothing heard on 143.625 or 130.167 either.

Was not a really good pass, only 10 degrees elevation NNW above horizon but it was clearly heard working a couple general voice contacts. No other good high elevation pass until 20APR01 @ 0203Z @ 63 degrees NE, other not so good coming are 2251Z @ 5 degrees N & 0027Z @ 11 degree NNE. My luck they'll probably be sleeping!

Wonder what their sleep schedule is for today? Staying up late waiting for the shuttle to arrive? Leaving the light on for them? :)

Dunno... I'm getting to the point where those greedy aholes in RS really "turn me off"...
They run to the customer they think will get 'em the biggest percentage while totally ignoring the others.. Because I had nothing else to do one day, I once waited nearly an hr for the guy to get thru explaining to some woman why she should buy a cell-phone (he could have sold me the voltmeter within a few mins while waiting on her at the same time), and I've had 'em leave other customers looking at batteries when I was browsing a computer-system (which I didn't buy, of course)...
I much prefer to shop at stores where the clerk isn't driven by that per-customer profit...

Hi
I have both radios running side by side (actually 780 sits on top of the 895 which sits on top of a IC-R7100). All radios on same antenna with a splitter and a pre amp all on external speakers and all work great.

As for PC control I have WinScan 780 and WinScan 2.10 I only use these to program channels and they both do a nice job for that purpose. You can program more information into the 780 which will show up in the display.

Hope that helps a little.
Bob

Any chance you are using McAffee Virus Shield on your ME? It came with my HP system.
I was and it cause my system to hang. Seemed to conflict with some video drivers?
If you have it running in the background try disabling it and reboot without it.

mark

Message-ID: <9bo1f6ijb1@plutonium.btinternet.com>
Source record: 66705

Hi folks, I just added a lovely old pro2006 to my shack and was having lots of fun scanning again, what i was wondering was can someone give me some pointers on which antennas are the best at the moment. I have read about the Diamond D130J discone and the AOR DA3000 and both look good, but does anyone have any experience of these antennas in action and can I get them in the UK. Any ideas/ suggestions on which antenna to string up outside would be gratefully received, doesnt have to be one of those mentioned- just what are your favourite antennas!

regards,

Paul

Let me also add that their salespeople are dumb and quite humbling
as I think they are salvation army rejects.
When you come in their store, they can't leave you alone. They come up
to you and pester the crap out of you and then they follow you around as if you
are going to steal their little $2 bits of crap hanging all over the place. Then when
it's checkout time they are going to ask who you are even if you pay with cash, so they
can sell your name to a mail order list which will in turn be sold about 10 times further
once it has left Radio Shack's computers so you get junk mail out the butt. Also what you
buy can be traced if anyone is suspicious of you.
Oh, did I mention the insanely high prices for their junk! At least if they are going to
sell
connectors and so on, they sell truly high quality stuff instead of components that look
high quality
but are cheap after further inspection.
Also, I bought a dual line phone tester. Some idiot in Taiwan or china or wherever they are
made, put
the plug on backwards where the proper wiring always shows as wrong wiring, on both lines!
Geez, real crappy equipment there!

And they will not, under any circumstances, let you speak to
their technicians. What kind of radio store is that? High
prices, bad service -- go elsewhere.

hehe. naa. I don't want to swallow one of those. what is the opposite of FBI in canada. CIA or something. they may track me and shoot me. lol. but. ya. our Walmart and zellers. they use no IR in their stores. all RF. I think presuming the size of the antennas in the Ghz. but hmm. Maybe tomorrow I will go to walmart with my counter and see what those wall scanners are transmitting on. I will use the excuse if asked. I am a ham doing personal experiments. hehe. that has worked lots.

2595. PCS Antenna Site Rentals

Newsgroup: rec.radio.scanner
Date: 2001-04-20 15:31:19 UTC
From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <9bpko7$b2j$1@sshuraac-i-1.production.compuserve.com>
Source record: 66734
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm in a downtown high-rise (24 story) condo and learned at the board meeting that we're talking to a major Cell/PCS firm about accepting a text pager antenna on the roof. I raised a few questions and suddenly I'm an unofficial advisor on the deal (I made the mistake of mentioning a BSEE and FCC Commercial ticket). While I'm predisposed to question the deal for the sake of my scanner / SW / etc reception, I do want to be honest in any comments I offer. I'm assuming it will be a relatively low power 900 MHz unit (specs will arrive this afternoon) and won't be the pain that the older 450 MHz RCC transmitters are.

Does anyone have direct experience with leasing a building site for cell / PCS / pager and know what a reasonable fee is ? Any particular problems to look out for or clauses to include in the contract ? We currently have conventional cable TV but there has been talk of possibly going to a satellite service - any problems with 1st or 2nd harmonics ?

Any informed comments gratefully received.

>Subject: Re: How come some people trash Radio Shack?

Over the years Radio Shack has become more of a Cellular Outlet than anything else. I can still remember when going there was a chance to learn something and be helped, not hounded to buy a Cell Phone.

I still go there but wait till it is packed with droness who think RS is the Answer Place and I then have a chance to browse and find what I want.

Hate to say it but I know several friends who 100% refuse to even grace the place.

I have voiced this to RS HQ to no avail as most are owned by individuals not RS.

Its sad but with a Phone Book and the Internet we can now get better quality items without being stalked like you are a shoplifter or are willing to be told things you KNOW are a** backwards.

I could tell you stories about how wrong they are on almost every question.

Shame.

My 2c worth on this.

I tell the cash register operators what I want if they ask. When they
hear me describe something, they'll realize they're way out of their
depth and they'll leave me alone.

>Hate to say it but I know several friends who 100% refuse to even grace the
>place.

Why? Because they might believe something a cash register operator
says?

>I have voiced this to RS HQ to no avail as most are owned by individuals not
>RS.

>Its sad but with a Phone Book and the Internet we can now get better quality
>items without being stalked like you are a shoplifter or are willing to be told
>things you KNOW are a** backwards.

Just tell them what you're looking for and ask them to leave you alone
while you evaluate your choices. It's not like they're so well
stocked that you have to choose from so much.

>I could tell you stories about how wrong they are on almost every question.

The rest of you can act superior about RS staff, but I doubt you'd
work for them for the wages they pay.

Go to RS with a notion of exactly what you want. Don't listen to the
cash register operators, because if they had the education to give you
useful guidance they wouldn't be working there in the first place.

Those of you who expect better need a reality check.

Welcome to the modern world of retail.

Medical discussions are never aired, and the actual comms are (probably
still) S-band or Ku-Band encrypted, so it's unlikely anyone overheard them.
That sort of comms is simply cut off from redistribution by NASA by default.

I guess they'd rather you not hear the astronauts discussing 'bodily funtion
problems' in space. =)

I agree with you 100% Jake. You have to wonder if these RS detractors are going into Wal-Mart, KMart, Sears or any other chain store expecting to get expert advise, technical commentary and comparison on every product? Do they complain about these folks too? OTOH these RS trashers seem to keep going back to the shack, they always have a pocketful of tales. Why is that? Could it be because there really is no other place like RS?

2601. PDW ACARS Update

Newsgroup: rec.radio.scanner
Date: 2001-04-20 18:00:48 UTC
From: Jason Petty <pdwpaging@ntlworld.com>
Message-ID: <3AE07950.77B939F6@ntlworld.com>
Source record: 66741

```
PDW V1.08 - Windows POCSAG/FLEX/ACARS Decoder.
--------------------------------------------------------------------------------

PDW has these features:

- Decodes POCSAG/FLEX and now ACARS signals
through the serial port or sound card.
- POCSAG 512, 1200 and 2400 baud rates.
- FLEX 1600, 3200 and 6400 baud rates.
- Real-Time filtering.
- Unlimited filters.
- Command file option.
- Signal indicator.
- Print option.
- Message logging with Time & Date stamp.

Here's some quick instructions for decoding ACARS signals with PDW:

- Find an active ACARS frequency from the list below:

131.550 MHz AM - Primary channel for the USA and Canada.
131.475 MHz AM - Private company channel for Air Canada.
130.025 MHz AM - Secondary channel for the USA.
129.125 MHz AM - Tertiary channel for the USA.
131.725 MHz AM - Primary channel for Europe.
131.525 MHz AM - Tertiary channel for Europe.
131.550 MHz AM - Primary channel for Asia/Pacific.
131.450 MHz AM - Primary channel for Japan.

- Connect your 2/4 level interface or soundcard cable to the
Earphone/Speaker out
socket of your scanner. Note: a discriminator tap won't work for
ACARS!
- Select "Setup" from the interface menu and select soundcard or
serial port
for input.
- Set your scanners volume to about a quarter.
- Select ACARS from the monitor menu.
- You should now be getting some ACARS data.
- If your getting mainly garbage try different volumes.
- Once your getting some good results turn on full parity checking
in program options.

You can get the latest version of PDW from:
http://www.pcapaging.ic24.net/
```

To find out more about ACARS signals, try this site:
http://www.acars.subnet.dk/323244.htm

To find out what ACARS signals sound like, try this site:

For the "cracker-jack" scanner-person like yourself, the tech-advice you get from RS is ok..
You got your cell-phones, dish-recievers, big-screen tv's, some scanners and CB's, etc. that just about anyone could give "plain-vanilla" advice on..
Especially concerning the extended-warantees, "premium" contracts, etc....
For those of us who want technical advice, otoh, asking someone who's simply there for the great commissions isn't much of an option, glenn... They do usually have one person "on the staff" who has some tech knowledge of what they're selling, but they're often working another shift or are helping other customers.

And there are LOTS of places where you can get good advice on radios and electronics.. It's just that till you need it, you wont have any reason to look... Atleast in metro areas, there's usually radio-shops, clubs, etc. etc. that you'd have had no need of...

Not to start a big issue over this but in my experience when visiting the Shack
I am often not happy with the results:

Be it they are sometimes the only local option.

Have shifted from Customer Service to simple Selling

Have lost most staff that are remotely aware of the specs. of most products
they sell.

Good or bad, thake em or leave em.

Can't use a kill filter BD? Another inadequacy BD?

> I'm getting tired of you stalking me, glenn.

I don't think my telling you in a public forum a number of times that the world doesn't necessarily have to follow the laws of BD is defined as stalking BD. Your unsolicited E-Mails would come closer to stalking than that does.

>.. And altho it will be a waste
> of time, I'm sure..

Says a guy willing to hang out in a Radio Shack for hours being ignored. That's funny.

> I have contacted my legal about you..

What's a legal? Did you call one of those 1-800 lawyers you saw on TV? Told them I have damaged you? ROFLMAO!

>(anyone who wants
> to do a dejanews search on you can see what I'm talking about, and it's not
> just me who's complained about you..)

Yeah toilet boy and his make believe buddies like the 2 Larsons have. So what? I see complaints by many about you being a net cop BD, what's that mean? First you spew stalking and now this. Poor BD!

> I've forwarded all your posts and emails to them. I did save 'em, just in
> case you're wondering..

You save everything of mine rahter than use a kill filter???? Who's a stalker?

> I hope you don't mind getting a bit of media-attention while I'm at it,
> also... Cyber-stalking is a "hot item" nowdays.. Especially when they've
> the "epaper-trail" I've got saved on you...

.....BD this stalking seems to be a personal pojection of your. Seek help. You accuse me of stalking and then later in this NG you reply to me regarding a post I made to another person. Seek help BD, medical help.

And to stay on topic, yes I am sure it had to do with your charming personality. You were probably lucky to get waited on at all.

I don't get tech-advise from RS. I would never consider it. I rarely say anymore to a RS clerk than I do the checker at the grocery store. If I give them my name and address I get cupons and notified of sales. Never have been bothered by RS with phone calls.

> You got your cell-phones, dish-recievers, big-screen tv's, some scanners

Just stay away from the Radio Shack discone. It hears fine, but the lower radials have a tendency to break off at the treads or to loosen up where they are swaged to the threads. I had to buy another antenna just to replace broken radials. The others now wiggle so much that it creates received noise. Don't bother with this poorly designed antenna. Although it would probably be just fine for an attic installation.

You're missing the point, glenn...
RS, as you know it, isn't what RS has always been.. I'd walk in there and find guys talking with the salesman about building a radio or designing some circuit.. And the salesman wouldn't be standing there begging for stock-#'s or trying to get them to buy extended-warantees.. They'd usually be very much a part of the conversation and might be offering technical advice of some sort... Of course, you shouldn't go there for such now, but... that's the point you're missing here.. People are comparing it to what RS USED to be like.. Get it?

And why do you assume that I'm refering to chain-stores when I say there's "lots of places" to get good info/advice concerning what people used to go to Radio-Shack for, glenn?...

Dunno... I've had my scanner (and every other reciever I've used) hooked up to my HF vertical ham antenna for a yr or so now.. Seems to work as well as any of the 'scanner' antennas I've tried for 30-1000mhz..... Of course, it doesn't do well at all for transmitting on the freqs it wasn't designed for, but... anyway.. Don't spend a lot for "specialty" antennas if recieving is all they're going to be used for... Try your tv antenna if you've got one..
It's sort of like the simple long-wire antennas most SW listeners use.. Very few people bother cutting 'em to the correct lengths, yet they still work just fine for the average listener..

BS BD, of the last 19 messages going back 3 plus weeks NOT ONE mentioned ANYTHING about what RS used to be like. I didn't miss the point BD you ae making it up as you go. What you don't understand is the thread is about RS not having highly trained technicians running their cash registers. Have an adult help you with the reading. GET IT?

> And why do you assume that I'm refering to chain-stores when I say there's
> "lots of places" to get good info/advice concerning what people used to go
> to Radio-Shack for, glenn?...

I have dealt with Tandy since they were a penny stock and sold more leather supplies than electronics and I can recall more than 3 people at Tandy/RS that had any technical smarts. RS has never paid squat, technicians don't work comission and make terrible saleman. This thread, if you had been following rather than stalking, is about RS and their lack of competant help. RS is a chain. You can't, won't, will not and couldn't find a chain that sells the same as RS and gives the advise you insist should exist. You can also explain you accusing me of stalking you and then continuing a conversation with me. What kind of medication are you on BD? Is that why you have such a problem understanding anything you read? GET IT? DOH!

Ratty O' Shack comic episode # 2 (To the city)
Meet Probot.. the trusty robo side kick.
Episode # 2 now showing for your viewing pleasure at:
http://www.RattyOShack.com

Ratty O' Shack is my comic strip about an alien from the planet "Teck-nul-ogie", who arrives here on earth thinking he has cloned himself to look like a human.. only to find his physical replicator device didn't do such a good job. He must now fit in with human kind until he can return home... but before that, he must survive using his superior brain power and anything else... such as pure luck... to get him through each day. Follow his Adventures, which should prove.. very interesting.

> Just a few quotes from previous posts in the thread....
>
> "Us old timers..."
> "Over the years..."
> "Decades have passed since then..."
> "Have shifted from Customer Service to simple Selling"

Says nothing about what RS used to be like BD. HELLO!

> uh, well.. Whatever you say, glenn..... HAHA..

No Stalker BD, it isn't "whatever I say" its what the facts are. Obviously something you can't deal with.

Just a few quotes from previous posts in the thread....

Dev - 3/28 "They should trian their people out here. that is all I can say about the canadian rat shacks..."
Steve Fleckenstein - 3/29 "When I go to my local Rat Shack all they want to do is sell me a cellphone and some calling plan"
Big Ron - 3/30 "AMAZING!!! A Rat Shack/Tandy salesperson actually knew what they were talking about. "
Al - 3\30 - "The salesman told him that this antenna was too powerful, and the radio waves would just go over it."
Scott in ca - 3/31 "Radio Shaft's management practices are not very effective at retaining quality employees, so anyone with any talent is eventually lured away."
Neveragain - 4/04 "Don't expect them to sell you a 25 cent part and have a professional engineer there to answer your questions for 20 minutes cause your dead ass was on the sofa when he was in college."

.................and they go on and on BD, not a single one, even cutting the quote like you do won't magiccally say anything about what RS used to be like. Now quit stalking me, I was talking to Jake you freak.

There a list of which ones don't allow such somewhere on the net?...
Can I just put the scanner the truck or remove the batteries, or some-such
when passing thru?...
And what if I had one installed in the truck (which I don't, but who knows..
I might someday)? Do I have to take it out when in those states if I'm from
an area that does allow it?...
Thanks.

PS. What does happen if I plead "didn't know" when/if I'm found to have been
listening in those states while passing thru?... Just a fine? Confiscation?
Jail-time? ;)

"Lennie Beecroft" <lbeecroft8041@home.com> wrote in message news:...
Hi!,

I went to Radio Shack on, Apr 17/2001 to buy a Mic for a TRC-216 Walkie Talkie (40 Channel Citizens Band Transceiver). *Note* I bought this CB New in 1987, Here it is 2001 and they had what I needed. As you may know or not know they Radio Shack / Realistic hasn't made the TRC-216 for a very long time.

I went to this other place to see if they had a 5-pin/din-Mic to fit the TRC-216, We're they helpful NO!. I phoned before I went, explained to Salesperson what I needed , He said yes that they have a Mic that would work in My TRC-216 CB, I went there the next day to buy the Mic, only to be told that it wouldn't work in My CB (BTW I Brought the CB with Me to show the guy what I needed the Mic for). They had a whole wall of 5-pin/din Mic's, Asked Salesperson if this Mic would work in My CB, and the CLOWN said no it wouldn't work in My CB,So I left and went to Radio Shack, Showed the Salesperson My TRC-216, and said I need a Mic for this, Didn't go to computer to look it up, didn't go to backroom to look there either. He went to shelf and bam! came back to Me and said to me Here is what you need. went and paid cash fot the CB Mic. No name,
No Cell Phone plan, No hard time, and No problems. All I left with is "Any problems with the Mic bring it back" . I will always go to Radio Shack for all my Radio needs. (BTW the name of the other place is RadioWorld, Never ever go there unless you like to be treated like a NOBODY!).

{Yes I Know This Is A Scanner Group}

I do own a scanner, I have a Radio Shack
(Realistic) PRO-51 Hyper-Scan VHF/UHF Hi-Lo-Air -- 200 CHANNEL DIRECT ENTRY PROGGRAMMABLE SCANNER...

Canadian Radio Shack's must be run differently than U.S. Radio Shack's?.

Anyway I thought I'd add My Canadian
Dollars worth eh!

Just received my new Yaesu VR-500!

My first observation is the stock antenna is sad! Almost anything works better. I have one of those little stubby-ducks, optimized for the 440MHz band, that actually works better on VHF/UHF.

For those of you that have a VR-500, and have experimented with various wide-band antennas, what's your favorite?

Thanks,
Bill Crocker

I believe the quality of service depends on which RS you visit. For example, there is a RS in a local Ace hardware store that is about the size of an average 1 car garage (Sorry, couldn't find any other thing to compare it to) and only has 'basic' stuff, like coax cable, car stereo equipment and such. There is never a salesperson around. There is a separate register than the hardware store, but it is never used. You have to take your purchase to the main register, where the employee knows absolutely nothing about the object. That is cruddy service.
On the other hand, there is one in another town 15 minutes away that is a true RS. Yes, is does highly promote cell phones, but the salepeople never push it on you. They are helpful. They let you look for a minute, then ask if they could help, and if not, leave you alone. If you need help, they know what you are talking about and are very prompt to get it for you.

My grandfather worked at a RS that used to be in town here (It burned 10 years ago) He was liscensed to repair almost any he is a liscenced electrician and appliance repairman, a CBer and Ham operator. He knows his stuff. I'm not saying all RS employees do, but not all are stupid, either.

I can agree with you on that. but most out here. is liek you said either in a store of bigger store or something else. I have found only 1 great radio shack store so far. that was in a town of around 2000 people. A ham owned the store. Great service and help. but most other ones. THEY have tried pusing cells on me and stuff. but in the end. some are crap and some are good. just got to find the good ones. but wish their prices were cheaper. .

Do a web search (use Google) for Icom CI-V interface. I don't remember the url, but there is an excellent site that describes the communication protocol used by Icom radios. Good luck.

I don't understand the reasoning of the manufacturers of putting trash antennas on new radios, for one instance the high end Yupi's.

I heard it was his ICQ number. Maybe he wanted to trade info for money with
the americans. It would have been cheaper than 'surveying' on China from the
air.

Maybe he was just being friendly and wanted an international pen pal.

Or maybe he was simply trying to tell the American pilot he had a flat tyre.

Did the chinese pilot have a web site also on that sign? FreeXXX.com ? If
so...just call his actions 'Aggressive Advertising'

Message-ID: <02jE6.31832$k04.6471137@news1.rdc1.mi.home.com>
Source record: 66692

I think the problem is, it's next to impossible to create a one-does-all, and have it perform well across the spectrum. The stock antenna on the VR-500 appears to be tuned more toward HF, and less on the VHF/UHF end. This may have been in an effort to boost reviews, as most all wide-band scanners perform poorly on the HF end, due to antenna limitations.

By switching to my 440MHz stubby, VHF/UHF has improved considerably, and as expected, HF has dropped drastically.

Maybe the answer is to carry several antennas, for various listening needs. I have a nice telescoping antenna, which is great, but too stiff, and bulky to keep on this little radio.

I have for sale a Drake R8B communications receiver. If you are looking at this you probably already are aware of the fantastic capabilities of this radio for short-wave listening and decoding digital modes. This rig is in perfect condition and includes the original box and manual. It has been used very little in a non-smoking environment. I will also include the FineWare Smart R8 Control 32 software to allow computer control of this rig. You can learn more about this excellent program at http://www.fineware-swl.com/src.html. Asking $900 shipped to your home in CONUS. If interested please reply direct by email.

you can't post them all. there are too many. Start at 902 and finish at 925. but most are up to 906. then you start getting into the inputs. EX 902.300 that is Mc donalds drive thru in some towns. in others it is Dairy Queen or Burger King. or a Cordless phone. the phones are usually 30 Khz apart. and if one sounds off frequency. then you know it is those 2.4 Ghz phone. such stupid phones. why not have both sides tx on 2.4 Ghz

I forgot to post this. for example. You probably have seen those see thru VTECH phones. they are see thru, Green, Orange, Purple, Blue. and so on. Those are only 10 channel 900 Mhz Phone. Those are the 10 channels they use. but remember others may use 902.0 and above 905.0 . lots of the newer 900 analog and some fake digital phones don't have lots of channels anymore either. If you have lots of channels free. Start at 902.0 and go up 30Khz steps adding each channel hehe.

902.3
902.6
902.9
903.2
903.5
903.8
904.1
904.4
904.7
905.0

Thanks Keith. I'll give it a try. I didn't think of searching for
CI-V. I already tried looking for "icom programming" and found lots of
bogus hits referring to the various softwares for the icoms.

I bought a pair on sale at Racing Radios at the track for $50... they're
just fine.
They also have a set of gel ear pads to replace the foam ones in most
sets...
don't know if these work better or not, but it makes sense that they would.

There is no VFO on the 350! It is a cheap radio that only goes to 512. No way it would have a VFO. Uniden must have a bunch of idiots working for them in Ft. Worth. They need to drive down the street to Radio Shack and hire a few people to turn it around, they have a lot of scanners missing on their website, and most models have no online info. Radio shack has instructions for almost every scanner they ever made. Also Uniden shipping for a single part is about 3 or 4 times what Radio Shack charges.

It may not have a VFO knob. but it Definately has a VFO. since it does stand for a Variable Frequency Ocillator. How do you think all these new scanners scan. Even the old crystal radios had a VFO knob. but wasn't that useful since you cannot realy tune veryfar off the crystals original frequency. so I don't know where you get it would never have a VFO. How would it scan. Yes it does say a VFO Control knob and looks like a misprint. but it has a VFO all radios do.

>

Walmart, K-mart etc... that use RF scanning technology use units that operate in the 2.4Ghz - 2.5Ghz range. These units are either frequency hopping digital spread spectrum or direct sequence. All have the ability to use encryption if need be. The Access points that these RF units speak to are hard wired into the stores network and all operate via TCP/IP. You would need some form of packet sniffer and would need to figure out what data is coming from who, where and what device. However these units are used for inventory control and NOT for checkout counters. So even if you could intercept this data and piece it all together it has nothing to do with the checkout counter.

There are other short range RF units available that are designed for point of sale equipment. However these units have no display, the display is the cash register. So application design for these units would not provide any pricing data being transmitted, You would scan a UPC code and the product information will be pulled from a database to the register. So if you were able to intercept the data from these units it would only be a UPC code.

Source record: 66612

I have a chance to buy a couple of MOTOROLA SABER radios that are equipped for encryption from a local community as they change to trunked radio system.

What do I need to know or get with this radio to be able to listen to a federal agency!!! I know the frequencies, but are they dozens of encryption schemes or what???

Any info would help, as these radios won't last long and if I can hear the feds will go ahead and get them...

If possible, please e-mail direct as I am travelling and the PALM won't do newsgroups very well...thank goodness for the continous of internet cafes!!!

thanks...

Message-ID: <20010421221233.19192.00000250@ng-mh1.aol.com>
Source record: 66614

I have for sale a Regency MX-5000 Scanner in next to New Condition!!!

20 Channels, 25-550 MHz Continous Coverage, AM / NFM / WFM
5K / 12.5K / 25K Steps. Delay, Search, Priority.
Receives Civilian Aircraft Band, Police & Fire, 200MHz Military Aircraft and Amateur Radio Band, also 70 MHz.

On a scale of 1 to 10, with 10 being the best in appearance, the radio is a 9.9!!!!
Owned by a non-smoker. Comes with: Wall-mounted AC Power Supply, DC Power Cord, Mobile Mounting Bracket, Telescopic Antenna with Right-angle Adapter, Instruction Manual.

I will double-box the unit when being shipped, and the radio will be in a plastic bag so that the bubblewrap doesn't get into it. $100.00. You pay shipping.
Thanks,
Dan

A few years ago I bought a pair of over the ear sound-deadening headphones. Mono with 1/8" plug, and a volume control on one ear that controls both. Coiled cord. Called "Speed Zone", sold at Radio Shack but actually made by Koss (a reputable brand). They were about $35 if I remember. Real happy witht them. I have not seen that particular model at Radio Shack lately, but I know they sell something equivalent since my dad bought a pair for himself last year. They are nice too. Perfect for races of any sort.

Not neccessarily. Each state has different laws and although many states have
exceptions for hams, not all do... now, if you have a ham transceiver that also
RX'es non-ham frequencies, then I'd say you're ok no matter where you are.

Well, the Denton School District is on 453.0 and 464.55

They may be on there, unless they are privately owned....

BTW, why do scanners offer fast/slow scan options (either by 'hacks' or programming)?
I've always used the fast speed on mine, and... Never really thought to wonder about it till now.. ;)

What exactly does this mod do, I mean I know you said it gives me up to 80 channels now but I'm a newbie and not really sure what that means. Can I get frequencies I could not get before like 800-900 ranges?
I did the mod and the radio seems to be working as it was before (so I didn't toast it anyways) but now what?

Thanks for your help!

I have one of the earlier models of WinRadio - now being described as the Model 1000i.

For a number of reasons, I've not used the unit for a some time.

Today, I installed it in a PC - Celeron 500 MHz, operating under WIN98 SE.

Initially, when installed, the address for the unit was 180h (the factory default). I also installed the antenna provided - BNC connector with 10 ft. wire.

I installed the original WinRadio interface software.

Launching the interface software, NO sound. The software indicated activity on the "S" meter, but no sound.

I then installed the most recent version of the interface software - Version 3.20.

Once again, I identified the address as 180h.

Same results.

Subsequently, I changed JP1 on the board to pins 3/4 which is 188h; I also modified the software to reflect this change of address.

NOTHING - sound wise, that is.

Any ideas?

Thanks -

Jim, N9GBH in northwest suburban Chicago"

2700. Re: VR-500 Antenna???

Newsgroup: rec.radio.scanner
Date: 2001-04-22 15:36:10 UTC
From: DougSlug <twinpoppa@hotmail.com>
Message-ID: <KTCE6.36339$Xr.4074023@news02.optonline.net>
Source record: 66639

I have found that my dual-band flexi-stubby on the VR-500 even works fairly well for the WX channels, whereas the stock ducky is almost perfectly deaf there.

My Radio Shack $9.95 coil-loaded telescopic whip performs very well on the VR-500 over a wide range (AM broadcast up through UHF), so it is always along when the VR-500 is there. This is the closest thing to a "wide band" antenna for portable use I've found. There may be other telescopic whips that do a little better, but I haven't really looked for them. The StrongSignals.net review of handheld antennas concludes that the RS antenna is among the best whips, especially considering the price and availability.

I've also found that the Scantenna Mark II from CRB Books is an excellent ducky for the VR-500, and it's only slightly longer and a little fatter (actually skinnier at the base, but fatter at the end). That is the primary antenna for me...the stock ducky is in a box somewhere at home.

The "Miracle Baby" and similar bullet-style stubbies are not terribly useful unless you're listening to strong local signals in and around the 2m and 70cm ham bands, and certainly could not be considered effective wide-band receive antennas despite their manufacturers' claims.

Doug

2703. Re: Freqs on In-Flight Phone ?

Newsgroup: rec.radio.scanner
Date: 2001-04-22 17:17:08 UTC
From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <9bv3mkncu1@sshuraab-i-1.production.compuserve.com>
Source record: 66642

empathy <empathy_member@newsranger.com> asked:
> Does anybody know the freqs of in-flight phone service ?

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

Air to Ground Telephone [22.521]

Ch Ground Airborne

Signaling 454.675 (459.675)
6 454.700 459.700
7 454.725 459.725
5 454.750 459.750
8 454.775 459.775
4 454.800 459.800
9 454.825 459.825
3 454.850 459.850
10 454.875 459.875
2 454.900 459.900
11 454.925 459.925
1 454.950 459.950
12 454.975 459.975

Transmissions are FM. Ground stations repeat the airborne
half of the conversation, and transmit a continuous tone when
idle. From one to four channels are assigned in a particular
area.
Service is used on private aircraft.

800 MHz Air to Ground Telephone [22.1107]

- - Airborne - -
Blk Ch 1 - Ch 29

10 894.0055 - 894.1735
9 894.2055 - 894.3735
8 894.4055 - 894.5735 Guard Band -
7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels
is assigned to each geographical area. Ground frequencies are 45
MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

> >
>
>
> How would I monitor SDG&E with a BC 245XLT?

Ericsson Trunking (GE).

Channels: 856.150, 856.300, 857.150, 857.300, 858.150, 859.150, 859.175, 860.150, 860.175, 860.425

Groups: All groups I've heard there are in Agency 2. So, you could program (for scan mode) just to scan 02, with 02. <enter>

The groups I've so far heard active are:

(All groups prefaced with 02-)

024, 026, 027, 061, 062, 065, 081, 082, 084, 085, 086, 087, 097, 101, 102, 122, 141, and 144.

062 and 102 seem to be the primary 'Electric Distribution' groups. I'm fairly sure 026 and 097 are Gas groups. It seems like the 'Station' letters may have changed some, though. Station Y is still the 'Trouble' station. Electric Distribution ID's as 'Distribution'.

2705. Need schematic for Bearcat BC-210 (not the XL but original)

Newsgroup: rec.radio.scanner
Date: 2001-04-22 18:19:46 UTC
From: CDT <xctx@onr.com>
Message-ID: <6hFE6.7$v32.1907604518@news.onr.com>

I have a BC-210 that has PLL problems. The PLL
works on parts of the bands but not others. I suspect
the power supply, etc.

Does anyone have schematic for a BC-210 (not the XL version)?

thanks,

Charlie

Become an Amateur Radio Operator. The laws don't apply to them(with the exception of use for illegal purposes)and getting a technician license is a breeze. All states exempt hams from these types of laws.

2709. video-n-data scanner?...

Newsgroup: rec.radio.scanner
Date: 2001-04-22 22:33:24 UTC
From: BD <bodu@pobox.com>
Message-ID: <Y%IE6.55$U67.107232@nnrp3.sbc.net>
Source record: 66548

Hmm... What about all the video and other data signals that're heard when scanning?
There any scanners (I know you can get radios/tv's for particular frequencies or bands) out there which can decode/view a wide range of different modes/standards of those over the usual 30-2000mhz range of freqs? With all the wireless video-survaliance (however that's spelled), etc. nowdays, things should should really be interesting.. ;) Heck, you might even be able to see all those racists msgs the cops were getting in trouble for at one time for typing on their terminals in the cars.

Which won't do you a lot of good if it's a LOCAL (City or County)
anti-scanner law. Some of them exempt, some do not. I think most state
laws have ham exemptions, though I'm not SURE of it.

Doesn't matter if there are local laws or not, Skip.
The FCC has pre-empted (SP?) those laws for
licensed Amateur Operators. There used to be
several sites on the web that carried the text of
the ruling. Get a ham ticket and throw a copy of
the ruling in the glove box.

if you are good at taking things apart. it is a simple job. just try not to touch any IC's. well I can't say don't/ just don't try it on a really dry staticy day. and the only other thing to do is if you are doing while sitting on a rug. just touck your computer or anything once. just to make sure there is no static in you. I have rubbed my scanners on rugs and couches. I have only once wrecked a radio due to static. but there is always taht possability. to change the keypad. you may need a tiny phillips screwdriver. that is all. :) have a great day and good luck

Thanks again Dennis, the mod works great! 80 channels now! Are there any
other mods I can do to this model?

I recall that, alright... they preempted local laws for HAM gear, that is,
trancievers that happen to cover police frequencies, NOT seperate scanners,
way my ancient memory recalls it.

And, when I had time, I looked it up; It applies ONLY to ham trancievers
incidentally capable of receiving police frequencies, NOT scanners, in any
way whatsoever:

MEMORANDUM OPINION AND ORDER

PR Docket 91-36 Aug, 20, 1993

. "..As a consequence of these changes, the rules now expressly authorize amateur service operation "at points where the amateur service is regulated by the FCC,"... Furthermore, the Commission's Rules do not in any way prohibit an amateur service transceiver from having out-of-band reception capability.

11. Against this background... [S]canner laws that prohibit the use of the transceivers because they also receive public safety, ... or other radio service frequencies frustrate most legitimate amateur service operations... Virtually all... equipment in use today can receive transmissions on the...frequencies at issue... This very significant limitation on amateurs operating rights runs counter to the express policies of both Congress and the Commission... and impermissibly encroaches on federal authority over amateur operators. It conflicts directly with the federal interest in amateur operators being able to transmit and receive on authorized amateur service frequencies.

12. For these reasons, we find it necessary to preempt state and local laws that effectively preclude the possession in vehicles or elsewhere of amateur service transceivers by amateur operators merely on the basis that the transceivers are capable of reception on public safety, special emergency, or other radio service frequencies, the reception of which is not prohibited by federal law. (e.g. Cellular...) WE find that, under current conditions and given the types of equipment available in the market today, such laws prevent amateur radio operators from using their mobile station to the full extent permitted under the Commission's Rules and thus are in clear conflict with federal objectives of facilitating and promoting the Amateur Radio Service. We recognize the state law enforcement interest present here, and we do not suggest that state regulation in this area that reasonably attempt to accommodate amateur communications is preempted. (See Amateur Preemption order 101 FCC 2d at 960) This decision does not pertain to scanner laws narrowly tailored to the use of such radios, for example, for criminal ends such as to assist flight from law enforcement personnel. We will not, however, suggest the precise language that must be contained in state and local laws. We do find that state and local laws must not restrict the possession of amateur transceivers simply because they are capable of reception of public safety, special emergency or other radio service frequencies, the reception of which is not prohibited by federal law, and that a state or local permit scheme will not save from preemption an otherwise objectionable law. (Local government may not deny radio licensed radio use). Finally, we note, as stated by APCO in comments filed previously in this proceeding, that any public safety agency that desires to protect the confidentiality of its communications can do so though the use of technology such as scrambling or encryption.

13. We hold that state and local laws that preclude the possession in vehicles or elsewhere of amateur radio service transceivers by amateur operators merely on the basis that the transceivers are capable of reception of public safety, special emergency, or any other radio service frequencies not otherwise prohibited by federal law, are inconsistent with the federal objectives of facilitating and promoting the amateur radio service, and more fundamentally with the federal interest in amateur operator's being able to

transmit and receive on authorized frequencies. We therefore hold that such state and local laws are preempted by federal law.

14. Accordingly, IT IS ORDERED that the request for a declaratory ruling files by the ARRL IS GRANTED to the extend indicated herein and in all other respects is DENIED.

This person won an ebay auction of mine. Read it below:

Db Products Six Cavity Duplexer VHF I don't know much about this
duplexer, other than what I was told. I got it from a Ham
who said he had it on 146 MHz and it goes from 146 to 174 MHz. And he
said it works fine. It has a manual for it. Being I
don't have equipment to check it, I have to sell as is, so please bid
accordingly. Sorry, Thats all I know and can't answer any
questions, I'm not a tech. Winning bid must pay for within 6 days of
auctions ending with Postal Money Order only. Sorry, I
don't do paypal or anything else. Winng bidder must contact me within
24 hours with mailing address. I ship UPS only. USA
bidders only. Shipping UPS Ground is a fixed price of 30.00 Shipped
And Insured. Thanks and Good Luck To All!

After he wrote numerous emails BEFORE the auction ended, I reassured
this person that I did not know anything about these. That's why the
auction began with a $1 opening bid with no reserve.

I also stressed to him numerous times to PLEASE bid accordingly that
this item is AS IS and I have no further info about them. I told
him that I personally could NOT check them.

He won the bid anyhow, and now has the item and is not happy. He
called me on the phone harrassing me and sent harrassing emails.

On the auction, I also posted several pictures of the duplexers for
bidders to view.

Richard Gillani is a complete nuissance and I would like to warn
others out there that may be selling to him. Watch out. He's a bad
penny. His Email address is: tbolt@ix.netcom.com

This will be my only posting because I will not waste these boards
bickering back and forth. My position has been stated here.

Thanks for reading this.

He goes by one of these two calls AK2K or W3RJG at the same
address which is: 3084 West Seneca Turnpike, Marcellus, NY 13108

The real reason is because there are lots and lots of RS stores in
every metropolitan area. They are nearly everywhere.

That's their only saving grace. Where else are you going to go to buy
that hank of RG58 cable you need at the last minute?

Where else can you buy a common transistor or chip for that one of a
kind afternoon project?

Yes, the radios are ok, not great, but ok. The prices aren't great
either, but neither is the price of gasoline, or shipping and handling
charges. For what it is, it ain't bad.

But those of you who really are looking for advice on what to buy, get
over it. I have news for all of you: You won't find good advice in a
high end stereo shop either (Oh, they'll spout all sorts of nonsense
which sounds logical until you actually run it by an EE). You won't
even find much good advice in your local electronics parts stores.

If you want someone to help you, find a club which doesn't have a
financial stake at selling you something. Find others with experience
and learn to ask questions.

If you can't do that much, you're in the wrong hobby and you're in it
for the wrong reasons.

If you want the industry standard in headphones, try David Clark.
Yes, they're probably as expensive as your scanner. They're really
meant for Aircraft service, but I've used mine in other places as
well.

Try some of the Aviation For Sale places, you may be able to pick up a
complete Headset (including microphone boom) for $100.

Keep in mind, those active noise canceling headsets are effective
primarily at lower frequency noise (mostly below 1 kHz) and they do
very little with the higher frequency stuff. A passive headset is
usually a better bet for an environment such as NASCAR where the
engine noise is so high frequency.

Some, if not all, of the Bearcat crystal scanners use an IF frequency
of 10.8 Mhz. The industry standard is 10.7 Mhz. Other than that, I
believe the crystals are standard. Any supplier ought to be able
supply crystals for a Bearcat.

Search the internet for suppliers.

2746. Rookie trying to decide what to buy

Newsgroup: rec.radio.scanner
Date: 2001-04-23 18:26:26 UTC
From: Doug Matulis <doug.matulis@docsense.com>
Message-ID: <3ae473ef$0$15224@wodc7nh7.news.uu.net>
Source record: 66585

Hello,

Wondering if I might tap into everyones experience. I am interested in purchasing
a scanner and, up until now thought that a scanner was something you got at your
local Radio Shack or a Bearcat scanner. After coming across a magazine called
Monitoring Times, I now see that there are many other possibilities. Specifically,
radios that are called 'Communications Receivers' as well as traditional scanners.

Being a rookie, I have some questions:

1. Leaving the trunk tracking out of the picture, can someone help me as to why I
would pick one over the other. (i.e. advantages/disadvantages, use differences,
etc.)?

2. My town does not use a Trunking System yet but others in the area do, will I be
sorry if I don't get a truck tracking scanner?

3. What freq. range and modes are necessary to get, AM,FM,WFM,NFM,USB,LSB?

4. Will a scanner be obsolete when the world goes digital?

Thanks,
Doug...

I would be able to do most of those repairs for very very cheap. except the power supply. but I live just above colville in canada.
Mr. Brian J. Preston <bpreston@wecon.com> wrote in message news:3AE2F042.A7DEC67F@wecon.com...
A couple just need to be cleaned and the squelch is not working properly. On one the external antenna jack does not work and one needs a new face plate.
I do have one unit, a BC 250, that needs a new power supply.

Brian

forsale:

one GE TMX8825
Commercial trunking radio (not sure on the format)
Presently programmed with 39 frequencies including the 5 itac channels.

This radio can be re-programmed by most radioshops for about
20.00.

Superb Sensitivity and Selectivity (no interference from cellphones).

Has a 6 digit alpha display for each channel

I am not sure it can scan, possibly needs to be programmed to scan,
i now use it as a toggle UP/DOWN to each channnel receiver.

This radio is all encased in metal, heavyduty model, about 2" tall, by 7"
wide, by 8" deep or so

Comes with:
mobile mounting bracket
mobile power cable harness
mobile magnetic 3" antenna
base 13volt wall adapter
there is NO microphone

I will pay for shipping by US postal service with insurance.

(45.00US international postal check - from postoffice) or certifed check,
or trade for something???

thanks
jpotoma@home.com

hmm. that is a hard decision. I moved to a townt aht has no trunking. and my old town used different technology then trunking. hmm. I here use ham radios and a pro 2045 and a icom pcr-100/canadian model. people always say get a uniden bearcattrunk radio. but. if you don't use trunking in your town. get one that receives good. find one with good intermod rejection and one that has not many images. I know I bought one rad shack scanner that was a handheld. Stupid 800 Mhz cell was pastered over the 30 megs area. and 149. etc. I forget the model. I had it for a week and got rid of it. it covered from 26 to 1300. it was crap. What do you want to listen to. If yo know get a radio that does better on those bands then. Hope you like what you buy and try.

73 de ve7 naa, Devin

I forgot that you can find hams home adresses very easily..

3 portable radios

Regency LMRT 2500
presently transmit and receive on 173 MHZ
they have dc power jacks
they have a 16 button keyboard on the front

they need plastic battery holders and bnc rubberduck antennas

these units power-up to display the model number in the windows
alpha-numerically.

I don't know anything else about these radios.

I will cover shipping cost by US postal service and insurance
40.00US (international postal check - from postoffice) or
(certified check), or trade for something????

thanks

See http://www.strongsignals.net/
for an Intro, FAQ's and Reviews of different models.

>2. My town does not use a Trunking System yet but others in the area do,
>will I be
> sorry if I don't get a truck tracking scanner?
Depending on just what you want to monitor, mostly for now it is only Public
Safety and Government going Trunked, see the LINKS page at PB Scanner for
Frequency list pages.

>
>3. What freq. range and modes are necessary to get, AM,FM,WFM,NFM,USB,LSB?

Most Scanners will work AM/FM Modes, higher end work the last 2 modes.

>
>4. Will a scanner be obsolete when the world goes digital?
Unlikely that everyone will go Digital because of the costs associated with
this, you will have years before your radio goes quite, maybe more.

The only Laws Hams are exempt from are the Use of Ham Frequencies and the Mobile use of radios able to tune Police Frequencies; this is because the number of Ham Rigs that can tune these frequencies, this does not permit them to Transmit on those frequencies though.

As for un-blocked cellular units, only Tecs working for Cellular Service Providers and Law Enforcement can monitor those frequencies and the Cops need a warrant to do so, ; and Cell Tec's would not use some outdated Pro-xxx or other, they have high speed units for that, just a quark of the law on that issue.

I'm sure this has probably been asked before but does anyone know where I can get a handheld antenna tuned for the 800 MHz band with a BNC connector? I prefer a stubby but at this point I'm not going to be too picky. I've does several searches and have not come up with anything. Any help is greatly appreciated.

I bought my first scanner over twenty years ago (a Bearcat 210). Three years ago I found that most public officials had gone to 800 mhz. I bought a Bearcat 235XLT. Then in the last three years all of the public officials have gone to trunk radios. This winter I did a lot of reading and bought the lastest and best the BC780XLT. Right now it does it all, except digital. The 780 also has the S.A.M.E. weather radio function. When I am at work my wife can turn it on and put it in weather mode.
You can buy a simple scanner, However, progress never goes backward.

MetroWest
822 N. Spring
LaGrange Park, IL 60526
(708) 354-2125 information
(800) 657-1475 orders
http://www.metrowestscan.com/

MetroWest has a few different 800 MHz band antennas, all with a BNC
connector. Or, try:

Radioware
1-800-457-7373
http://www.radio-ware.com/

Radioware has "The Seeker", a great 800 MHz gain type antenna. Not a
stubby, but performs great in the 800 MHz band.

From: Paul McCoy <kb0zmt@home.com>
Message-ID: <PT2F6.42851$rX5.3427980@news1.rdc1.il.home.com>
Source record: 66500

FOR SALE:

Regency Z60, compact, programmable 60 channel scanner.

This is a three band, FM monitor receiver and digital alarm clock for use at home or on the road. It is a double conversion, superheterodyne used to receive the narrow band FM communications in the amateur, public safety and business bands: 30-50, 144-174, and 440-512 MHz.

This unit is in excellent condition with no visible damage and includes user's manual and telescoping antenna.

The unit works fine including all the LED readouts. As with all used electronics, "as is" applies.

Price: $45, Shipping Included via Priority Mail.

Buyer must prepay with money order or cashier's check.

If interested, please email: kb0zmt@home.com

Actually it doesn't hurt to post it on Usenet in fact in might help. If said bad sellers comes on to a NG to do his bad act his mode of operations on E-Bay will show up in a new search. Would you buy from a guy on Usenet that had a bad reputation on E-Bay? Not me.

Glenn

BTW - Maybe BD can ask his lawyer for an opinion.

I am glad I bought the last CD ROM (March). It should hold me for a while & is all I care to spend with Percon. Besides, I do not trust anyone who makes it hard to find a price up front, you find the price only after you enter the subscribe info screen? over a non secure link? For a modern data service, this strikes me as awfully wreckless & negligent. While the dynamic logging of your account identity is running, you would think a secure page to enter your credit card data would be a given, right? At $24.95/6 month "trial period", seems like they aren't really sure about this either since it is the only subscription option available.

Good Luck to all new subscribers. I won't be joining you anytime soon! I honestly hope it fails because with a CD based system, while being limited in media size, it is free to be used as the user desires & not subject to being "connected" to access the data. I know many who use the CD's in the field & on laptops. How many have wireless web access in the field? Not many. This is clearly a marketing ploy & a paramount compromise of one's anonymous access to publicly entered data. Maybe Nextel & the FCC's revenue stream will make up the shortfall from "the little guys" who will stay away. Just think about the irony of the FCC subscribing to Percon's services to look up & interpret data that was entered by they themselves, at OUR cost! Ka-Ching! What a joke!

Maybe its just me (I am not paranoid just cautious) but good luck in the contest, hope ya'll score!

Rafman

First of all, PCS is 1800-1900 MHz so it is not really a concern to most scanner listening. Since sectorized antennas are used, the isolation provided by such will minimize any interference to other services. If you think about it, downtilt tailors coverage to prevent widespread propagation of these low power signals. Not even close to the nightmare of the 450 RCC's!

As far as leases, I can help you offline (email) with specifics. I have worked in tower construction & site management for a few years. It depends on who they are, what they want to put up & put in.

I would be happy to assist you in any way I can.

No we can't. those laws still apply. but it is easier to get those types of radios. some radios have extended receive that covers .05Mhz to 1300 Mhz. while transmitting on 6, 2, and 70. I wish we had more 200 Mhz tx radios though. But if you live in canada or europe you can get your unblocked radio anyways since there is no law to what you listen to, in a way.

13.10.010 Shortwave radio receiver defined.

As used in this chapter, "shortwave radio receiver" means and includes any radio receiver or other device capable of receiving messages or communications transmitted on any radio transmission station operating on a frequency between 1600 kilocycles and 2500 kilocycles, or on a frequency between 30 megacycles and 40 megacycles, or between 150 megacycles and 160 megacycles. (Ord. 5462 ï¿½ 1, 1950: Ord. 4322 ï¿½ 1, 1944.)

13.10.020 Installing or using shortwave radios in vehicles prohibited without permit.

Except as provided in Section 13.20.050 of this chapter, every person who, without obtaining a permit from the sheriff or from the forester and fire warden authorizing him to do so, equips any vehicle with, or operates any vehicle equipped with, a shortwave radio receiver, is guilty of an infraction. (Ord. 83-0066 ï¿½ 90, 1983: Ord. 5462 ï¿½ 2, 1950: Ord. 4322 ï¿½ 2, 1944.)

13.10.050 Exemptions from permit requirements.

The provisions of Section 13.10.020 of this chapter do not apply to:

A. A vehicle owned or operated by the United States, the state of California, any county, city and county, or municipality of this state, or any subdivision, agency or instrumentality of the foregoing if the department head or other governmental officer in responsible control over the operation of such vehicle has expressly ordered, authorized or approved the use of a shortwave radio receiver therein;

B. Any vehicle owned or operated by a person or association of persons licensed by the Federal Communications Commission to operate a fixed or mobile shortwave transmission station, one of the authorized purposes of which is to communicate by radio with such vehicle or with other vehicles owned or operated by such person or association. The owner of such vehicle coming within the foregoing exemption shall inform the sheriff of such use and give him the license number of the vehicle. Failure to do so is a misdemeanor;

C. Mobile telephone equipment for use in conjunction with communication service furnished by public utilities under the jurisdiction of the Public Utilities Commission of the state of California or the Federal Communications Commission. (Ord. 4861 ï¿½ 1, 1947; Ord. 4322 ï¿½ 4, 1942.)

13.10.070 Violation -- Penalty.

Violation of this chapter is an infraction punishable by:

A. A fine not exceeding $50.00 for a first violation;

B. A fine not exceeding $100.00 for a second violation within one year;

C. A fine not exceeding $250.00 for each additional violation within one year. (Ord. 12264 ï¿½ 1, 1980: Ord. 4322 ï¿½ 7, 1942.)

13.10.080 Severability.

If any provisions of the ordinance codified in this chapter, or the application thereof to any person or circumstance is held invalid, the remainder of such ordinance, and the application of such provision to other persons or circumstances, shall not be affected thereby. (Ord. 4322 ï¿½ 6, 1942.)

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

I do have members that live in such places as Oregon and New York. So, the part about living in central California is not set in stone.

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

--

2776. Re: Union Pacific Railroad

Newsgroup: rec.radio.scanner
Date: 2001-04-24 11:04:00 UTC
From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <9c3mj0grl1@sshuraab-i-1.production.compuserve.com>
Source record: 66515

"Mike" <michaelthalman@sprintmail.com> asked:
> Where could I find a freq. list for Union Pacific?

According to The Compendium, pre-merger the UP used road channels:
160.410, 160.470, 160.515, 160.740, 160.680, 160.980
and in various areas:
160.290, 160.320, 160.455, 160.920, 161.220, 161.280, 161.550, 161.565
The SP road channels were:
161.550, 160.290, 160.590, 160.320, 161.280, 160.650
plus
160.410, 160.455, 160.470, 160.515, 160.740, 160.920, 161.220, 161.565

They also use a host of other freqs. across their territories for various
functions, so a specific location might help.

Might want to double-check on this. Unless the law has changed in the last few years, Indiana and Kentucky do NOT exempt hams from the mobile scanner prohibition. Amateur transceivers with extended receive coverage are exempt per federal law shich supercedes state law...but scanning receivers are not.

Indiana Statutes, Sec 35-44-3-12 Unlawful use of a police radio ...
...
(b) Subsection (a)(1) and (a)(2) do not apply to:
...
(6) a person who holds an amateur radio license issued by the Federal
Communications Commission if the person is not transmitting over
a frequency assigned for police emergency purposes;

Kentucky Statutes, Sec 432.570 Possession or use of a radio ...
...
(4) Nothing contained in this section shall prohibit the possession of a
radio by:
...
(c) ... a person holding a valid license issued by the Federal
Communications Commission in the amateur radio service;

I guess that this now includes ALL new vehicles that have stock radios where
the "AM Broadcast Band" goes up to 1710.....

Also noted in that range is the 160m amateur band. Federal regulations and
rulings override. Licensed amateurs do not have to notify the sheriff as per
the exception in "B" below. FCC ruling 93-17 made that clear: Licensed
amateurs are exempt from state and local "scanner" laws, including those
regarding scanners in vehicles. [The ruling also involved amateur transmitters
with "out of band reception capability."]

Jay,

The Orange County APCO-25 Smartzone System information can be found at
the following link:

http://www.trunkedradio.net/trunked/astro.htm

Keep in mind that all law enforcement operations on the system
areAPCO-25 digital as well as DES-OFB encrypted. So, purchasing an
ASTRO Saber will do you no good for monitoring this system. Unless
you have an APCO-25 radio from The City/County, you will not be able
to monitor law enforcement operations on the system.

Fire Department operations are analog, and city services/mutual aid
talkgroups are analog/APCO-25 (non encrypted)

Now that's an interesting definition of "Shortwave radio receiver."
Note the date and the use of the older term "Megacycles."

That is correct. The FCC pre-emption specifically stated
"transcievers". No mention was given to separate
recievers (i.e. such as a scanner). The FCC preemption
protects you if your 2m mobile or HT also can receive
any of the cited frequencies.

Cheers,

I use a Watson WS889 telescopic antenna on mine. I'm not even sure where
the stock antenna is anymore.
It's a good compromise between length and performance. Since it folds, it
fits nicely in a pocket in my briefcase.
I think the VR500 is really a terriffic little radio. I wish it had a bit
more audio, a narrow AM filter, and FM stereo, but if it did, I wouldn't
have anything to look forward to!

2805. Fraud Alert David Woodard from Ebay / PayPal

Newsgroup: rec.radio.scanner
Date: 2001-04-25 03:49:53 UTC
From: webmedics@aol.comspambloc
Message-ID: <20010424234953.16908.00001865@ng-fo1.aol.com>
Source record: 66544

Mr Woodard was auctioning a Bearcat BC 9000 with accessories (VOX tape recorder, etc) on Ebay. Although I was the high bidder I didn't meet his reserve price. He contacted me through Ebay's mail forwarding program to offer just the scanner for my bid price. I accepted and he sent a PayPal payment request, which I paid with confirmation Email to the seller and the bidder. Here's what I know about him:

Ebay won't help becuase we didn't complete the auction.
PayPal won't help becuase out becuase this was a private deal and he used an anonymous Email to send the payment request. I find that odd since the payment I made was delayed becuase of the PayPal verification process.

He used the Email dgw321@hotmail.com as well as another which I can't locate right now. His Ebay ID is BearDavid and I was able to obtain this for a David Woodard in Winslow Arizona:

DAVID WOODARD
707 N BERRY AVE
WINSLOW AZ 86047
(520)289-0847

If there happens to be a generous newgroup user in that area, I would be indebted to you for placing a phone call or two.

ebay won't help anyhow. They have a lot of rules to keep you from complaining. After 30 days from the end of sale you can't even complain, period. So if the person leads you on for 30 days they are scot free.Plus they pretty much just warn people until the guy has a net rating of negative 5 points or so.

Your best bet is to start a new ebay account with a different name, and be the highest bidder on the guy's auctions, everytime just bid really high, then stiff him. You will be warned by ebay but not kicked for about 5 times.

Until the 1965 Watts riots, the LAPD used 1730 and 2366 kHz as
dispatch frequencies. The rioters jammed them, so the department
finally shut down the 1930s-era AM transmitters. I used to earn
coffee money by tuning auto radios to receive 1730 in the mid-1950s.

2809. Understanding Pro-94 Trunk modes... Help?

Newsgroup: rec.radio.scanner
Date: 2001-04-25 05:26:29 UTC
From: Mark Whitsitt <mwhitsitt@juno.com>
Message-ID: <9etF6.1136$3c6.411463@news1.elmhst1.il.home.com>
Source record: 66448

I am trying to understand the difference between trunk scan and trunk search modes on my Pro-94A, but the manual is not very clear. Can anyone shed some light on the subject?

Given that I correctly entered all the trunking system's frequencies according to the manual and identified the data channel, my assumption was that pressing "Scan" and then "Trunk" would allow me to listen to the trunked systems. After this key sequence, the scanner seems to be tracking the system, but I cannot hear any of the activity unless I press "SRC" and get the "SEARCH" indicator on the display. Is this the way it's supposed to work?

Actually, I'm pretty clear on the basics of trunking (still learning), but the entire section of the Pro-94 manual on "Trunking Operation" is a bit vague on the basic concepts it employs. Does anyone know where I might find a better description of how to use the various trunking features on the Pro-94?

thanks,
Mark

2810. WiNRadio and the WiNRadio Trunking option

Newsgroup: rec.radio.scanner
Date: 2001-04-25 10:36:21 UTC
From: Edwin Edeling&#65533; <edwin.edeling@hetnet.nl>
Message-ID: <3ae6a898$0$27463@reader3>
Source record: 66449
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,de.alt.radio-scanner,free.de.radio-scanner,free.it.radio.scanners,free.uk.scanner-radio,rec.radio.scanner

Hello,

Since a few months i'm using WiNRadio and the WiNRadio Trunking option. The trunking software does what it is supposed to do, track MPT1327 trunking systems, but i am not very happy with the software.

In first instance the software is working fine. I tune the receiver to an active control channel, when a traffic channel becomes active I tune to that frequency and after that the trunkingsoftware starts tracking the trunkingsystem and calculates the "control channel index" and the frequencies for the traffic channels. Everything is working fine, I can listen to conversations and the display is showing the fleet and subfleet ID's. When a conversations ends the software switches back to the control channel.

But... sometimes this doesn't work. The software looses track of the systems and a new, second control channel index is created. This new control channel index is also changing the frequencies of the traffic channels. From now on I can no longer track the system AND I can not change the software back to the correct control channel index. It is not possible to manualy enter the correct index number. And that is shit, because I know the correct number. I have to do a lot of work before I am able to listen to the trunking system again. Most of the times I have to remove the "mpt1327.mem" file and start al over again..

Second problem is that it is not possible to monitor only certain groups, that it is not possible to "lockout" certain groups. I like to listen to the conversations of the security company but doesn't want to listen to the taxi. Both are using a MPT1327 system and now I have to listen to both because the software is not capable of locking out the "taxi group".

My questions: is there a solution for the problem with the control channel index and/or are the XRS plugins available
that can solve these problems?

I'm using a WiNRadio 1500e receiver, WiNRadio software version 3.30 and Trunking option version 1.19.

Best regards,
Edwin Edeling - The Netherlands

I have seen that unit as low as $1295.00
via http://www.radioworld.ca/

That price is for US Mail Order, they say full coverage but there is always a
risk in attempting to import anything illegal.

The risk you take will be quite expensive is the unit is nailed at Customs and
if they go after you.

Doesn't matter whether it's legal or not, to E-Bay. It's their policy
decision to make. If they want to ban sales of pink velvet bows, they can.

However, the reason is that it's illegal to LISTEN, whether or not it's
illegal to sell, and E-Bay considers advertising that it's 'full 800' or the
like is encouraging criminal activity, which they frown on.

> It does NOT cover scanners.

It originally addressed amateur transceivers which have out-of-band RX of public safety frequencies. The FCC's RESPONSE does encompass scanners also in that they found that RX reception of public safety frequencies (HOWEVER RECEIVED) by licensed amateur radio operators WAS for the "public good." The dispute that gave rise to the ruling was that of an amateur transmitter with expanded RX (i.e. public safety band included) installed in a vehicle and that local jurisdiction's law banning "mobile scanners." The local jurisdiction claimed that the transmitter, by having the expanded RX, violated its scanner law.

Try reading the BACKGROUND of the notice.

So as long as it's not our ox being gored, everything is just fine?
That is the way fascists operate. Divide and conquer. Does any thinking
person realize that if hams are the only group left with scanner
privileges, those privileges can disappear without much of a whimper.
The ploy is to take away scanner privileges one group at a time.
In the meantime, hams can feel really special since they will be the
last group to lose scanner privileges.

Hi,

Wish I could help, but I've been having the same problem with my trunk tracking software. (I know you're not interested in hearing that - you want a fix - or at least a work around.) This has frustrated me since purchasing the software, and I figured it was something that I wasn't doing correctly. It appears the program was written specifically for a two receiver configuration, and someone saw potential, though unexplored, use for a single receiver.

I see it as a complete waste of money. Questions posed to the WiNRADiO folks were unanswered. If you receive an offline answer that's worth a damn to your query, will you please forward it to the list?

Thanks,
Bud (Niceville)

That's why -I- trash Radio Shack. All of the local stores (Seattle) that I've gone into have big cards hanging on the back of the check-out moniters that show the president (IIRC) of the co. and a nice, sweet little blurb of text about how they value our privacy, won't sell names, etc. I helped my mother get a RS credit card in her name only, but I had my address put down as the billing address so that I could pay her bill for her. To the best of their knowledge, Mom lived at my address and they had no idea that I even existed. Next thing I know, I'm getting tons of junk mail delivered to -my- address with my -mother's- name on it. Gee, I wonder how -that- happened? Maybe they -don't- sell the info...perhaps they just give it away.

Respect and privacy my butt.

I just saw it for sale for $324.00 at Communication Electronics... But they are
out of stock until May 4th... That price includes a set of Headphones too...
Not too shabby.

Pat,

I am looking for the display replacement unit for my PRO-2006. Is the one
that you have the same ? Are they interchangeable ? If so would you be
willing to sell it separately ? How much ?

Thanks in advance, Dave/N2JBO

>rules? Anyone know? E-Bay says they do not allow on their auction
>site.

Scanners with full 800Mhz coverage can and are sold regularly on eBay. The key is to NOT make ANY mention of the scanner's "special feature." If you make ANY reference to "receives cell", "unblocked", "full 800Mhz coverage", etc., eBay's roving listings police WILL pull the auction.

Just list the model of the scanner and say noithing of the cell capability. Those who will bid highest are already knowledgeable about what the scanner will and will not receive.

Then find something else. Gommert at BuTel worked hard to put together a great piece of software. If you want to take advantage of his hard work, pay for it. Don't come in here and expect everyone else to welcome a freeloading chiseler and help him rip off somebody who has made a real contribution to the enjoyment of the hobby by AR-8200 users. If you want to see how the program works, I think there is a demo version. feel free to try it. If you want to use all the features, expect to do what HONEST people do - pay! Otherwise, you are no better than some skel ripping off the cash from a convenience store register while the clerk isn't looking.

The only thing I like about radio shack is that I can get descent HAM radio tutorial's and training aids there for HAM radio.
I wish radio shack could live on but I think they will go bankrupt someday.
In my mind, radio shack hasn't done a thing for us since the TRS-80 and the 64 and 128K version
of the Color computers. :)

Hi group,

I'm sure one of the learned poster to this NG can tell me what the deal is on the perennial $12 scrambler plans advertised over the past few years.

Since I'm in the electronics biz, I have people asking me what the deal is, and now I'm wondering what the deal is too.

Obviously, it's a scam; just what do you get for the $12?

Bill

So, did you write to them and explain what's wrong with this picture?
Or are you bitching here because it's easy?

In any case, the FCC doesn't have any reason to tell the states what
to do unless the person is already licensed at the federal level.

The states are free to make laws governing roads and road vehicles all
they want. How else can you explain California's separate
environmental regulation for cars? And likewise, states can tell you
what you may and may not transport in that car.

So this battle has already been divided up at the state level. The
only place to win it is at the state level. Unfortunately, I don't
live in that state. The day Maryland decides to do anything this
stupid, they'll hear from me. Unfortunately, a resident of the State
of Maryland has only so much pull in other state houses...

Texas doesn't (yet) have a scanner law. When and if we do,
I will certainly contact my representatives. Time was when
it was legal to collect and listen to any RF. IMO, that's
the way things should be. If someone doesn't want their
RF transmissions to be monitored, they should encrypt them.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have a like new UBC3000xlt hand held scanner for sale. Comes complete in the box with everything including brand new battery pack. You will need the mains AC adapter though like the Radio Shack model 273-1662 or similar.

$235. OBO

I can accept credit cards via paypal.com

I'm in the East Bay Area of California. If you are local, we can arrange for pickup. If you are out of the area, buyer to pay shipping charges. Please email if interested, thanks,

Tom

2857. 1/4 or 1/2 or 5/8 wave antenna?

Newsgroup: rec.radio.scanner
Date: 2001-04-26 16:17:21 UTC
From: Erik Coleman <ecc@uiuc.edu>
Message-ID: <s4YF6.4517$4a1.63404@vixen.cso.uiuc.edu>
Source record: 66397

I want the ultimate reception capabilities with my PRO-2006 scanner, both as a mobile, and as a base scanner. What brand or style of antennas would be best under these frequency ranges? (I would probably like to use a separate antenna for each frequency band, I wouldn't be scanning both at the same time.)

Receiving 160-161MHz (Railroad band)

Receiving 896-937MHz (data decoded via discriminator output)

At home, I will be forced to mount the antenna in the attic (but have a good 7 ft. to work with), and for mobile use I would like to use something of high-quality, mounted atop my Explorer.

Also, what's the best wavelength to use in an antenna? 1/4, 1/2 or 5/8 wave?

Thanks in advance!

A Data Slicer/Decoder

Some Scanners make this the main aspect of their Hobby of Scanning.

Lots of other uses: Taxis, Buses, Service Companies and the likes use them for communicating to workers via text and so forth.

MDT's have been around for some time now and are seeing more use outside of Police and rescue users.

Just a note; I understand some MDT stuff is illegal to monitor; Do some searches on the Net for background on this issue.

This is a RADIO MONITORING event, not a dang cell phone derby. Cell phones are NOT radios. They are phones, that happen use radio frequencies. They are clearly NOT a replacement for radio's utility value & versatility!

Obviously, you have never operated from a mountain top. Please look up & understand radio "line of sight" before making such uneducated snipes. A recent distance test in NC yielded 125 miles on 1/2 watt FRS radios in LOS. The limit is in your mind, not in the application.

Besides, who in their right mind would put their cell phone number all over email lists & the usenet so all the hairbags in the world could run up their cell phone bill?

Read the message, don't harass the messenger. I simply wanted to get the word out!

Cheers & fears!

Rafman

"Stand by" huh? Easy for you to say, you don't have to contribute to the effort required, dude.

If a cell phone is just as much a radio, why do they call it a phone? Huh, dude?
You can listen to a radio without holding it up to your ear. You MUST hold up a phone to your ear to hear it, unless you are on speaker PHONE, dude.

Case closed. Now go shi(p), shower & shave with your cell phone close by, dude.

Like totally...

No, not true. Cell phones use radio components to function as a wireless phone. A radio has a PTT microphone & an audio speaker but a phone has an integrated handset that you must hold up to your ear in order to hear the desired communications. With or without the wire, it is still a phone by its function. It is not a play on words that there is no "cell radio". If there were, you could set it down on a table & listen to it.

Just think how much more annoying a world that would be!

Anybody want it? I can zip it up for you and send it to your email, or whatever.. I downloaded it off a hacking website.. Pretty easy to build... Won't work unless you live in the middle of nowhere with a cable system that uses ancient technology.... The whole thing will fit on a floppy disk, with room to spare, really small... Just a thought....

If interested, email and I'll send it as an attachment to you...

Hi, im trying to make up my mind on these 2 scanners, the original 8200 with the green color, or the newer model. I know the new one is supposed to be improved, but I really like the color and the collectability of the original. Anyone here have either one?...I was wondering how the reception and sound quality of either one is. I used to have a yupiteru mvt9000, I was happy with it and wish I havent sold it. Thanks rick....

It has a discriminator output. You have to first move a jumper inside
the radio -- this is noted in the R8500 manual.

>Does the Icom 8500 have a discriminator output?

Yes. Read the manual. There is one jack on the rear panel which can be
switched between discriminator and, I believe, the AGC output line.
You pick one or the other function of that jack via an internal jumper
which is referenced in the manual.

"radio" is norrmally used to describe anything capable of receiving or sending some sort of audio INFORMATION over the airwaves.... And a cell-phone fits that description perfectly.

The point, tho, wasn't that it'd be ok to use a cell-phone because it's a radio... I was just saying that it'd make much more sense for visitors to have a telephone # that they could call for info than to have to wait till they're within a few miles of the site before being certain of being able to contact the "call-in"...

The problem here is that the writer is talking like an ass. This is simply not true.

<<<<It'll probably be cheaper to buy a scanner that is already designed to receive HF signals.>>>>

This, on the other hand, is probably good advice.
There are more scanners available that can receive 27 MHZ than you'd believe.
Most people interested in CB just get a CB transceiver.

In answer to the original question,"Can You Modify A Scanner?", yes.
You can glue a spoon to it and have yourself a kitchen tool.

>>>It may not have a VFO knob. but it Definately has a VFO. since it does stand for a Variable Frequency Ocillator. How do you think all these new scanners scan.<<<<

What a crock. While it does have a Frequency Oscillator, without a front-panel knob or a set of tuning buttons, it is not Variable.

>>> Even the old crystal radios had a VFO knob. but wasn't that useful since you cannot realy tune veryfar off the crystals original frequency.<<<

VFO knob on a crystal scanner??? I've owned scanners, shortwave receivers, ham transmitters, receivers, and transceivers, VHFand UHF tuneable receivers, AM/FM receivers and tuners since I was 12. I'm now 47. I've never, in my life, seen a crystal scanner with a VFO. Where did you see this thing?

>>>I don't know where you get it would never have a VFO. How would it scan. Yes it does say a VFO Control knob and looks like a misprint. but it has a VFO all radios do.

You obviously hve no idea what a VFO is.

ok this topic is getting boring to me...but I will make my point, my razor and/or toaster has RF, that lil plug that you put in the wall to make the room brighter with runs on RF at 60hz right?..so since it will transmit RF {EMF} and it uses electric {RF @ 60hz} then under the statement that was made it should be classified as a "radio"..

of course we are talking semantics here and this is getting pathetic..cell phones use RFW just like all other communication devices..but does it fall under the category of a radio?..I think not..100.7fm is a radio, 2m 440 is radio, scanners are radios, but a cell phone is not a radio..

...end of thread due to boredom...

And what makes it not a radio, dude?
At what point would a CB become a telephone and not a radio if you started adding features from cell-phones to it? Any idea? Or is that a 'gray area'?
HAHA...
Hmm.. What about the radios with handsets? What about radios with PL tones and/or scramblers that help to make sure that only the two parties enter the conversation?
"Radio" simply refers to a means of communicating over the airwaves...
Which's exactly what a cell-phone does..

The same thing got people into trouble when THEY *thought* their cell phones were *just* phones and not radios! Because I can access the local phone lines thru autopatch, bring up the dial tone, and make a call, does that make my 2 meter rig a "phone"? Sorry, by the strictest definition a cell phone is still a radio.

And vice versa. I know my history, and I was making a general point. If we -really- wanted to complicate the issue, we could also bring up the various times that portions of the country were or were not under Japanese rule. A little off-topic meandering isn't such a bad thing, IMO...but as has been noted, this isn't talk.china.WWII...which is why I was making a general point. ;)

One thing about antennas, one can never really tell what is going to work, or not going to work. If its not to expensive, try it. If you connect the dipoles to RG6 coax, you might want to try joining the antennas through a coax splitter. Connect the scanner to what is labeled the INPUT lead, and the various antennas to what is labeled the outputs.

Walt

2925. FS - YAESU FT-50 - Mint - Mods - Extras

Newsgroup: rec.radio.scanner
Date: 2001-04-28 01:46:38 UTC
From: jcsarp@aol.com
Message-ID: <20010427214638.03795.00001259@ng-ms1.aol.com>
Source record: 66364

FOR SALE:

Yaesu FT-50RD Dual Band 2 Meter / 70 CM Handheld with extended Receive and Transmit Capabilities. ï¿½It is in MINT condition and works PERFECTLY. It is being sold as a "package deal" that includes a long list of accessories mentioned below.

I am the original owner of this well cared for Yaesu FT-50RD. ï¿½There is not a mark on it and it could pass for brand new. ï¿½The "freeband" modification has been performed on this unit to allow expanded receive AND transmit capabilities (see below). ï¿½This FT-50RD also has complete "no gaps" coverage of the 800 MHz band INCLUDING cellular. ï¿½This FT-50RD was built in one of the last production runs from Yaesu that would allow full 800 MHz coverage. ï¿½The current version FT-50RD is NOT capable of receiving the 800 MHz cellular band.

RECEIVE Frequency Range:
71 MHz - 540 MHz (no gaps)
590 MHz - 999 MHz (including cellular) (no gaps)

*** THIS RADIO will also scan at 15 kHz steps in the 800 MHz cell band. That means it WILL hit the 30 kHz channel spacing. The audio sounds GREAT!

TRANSMIT Frequency Range:
120 MHz - 231 MHz (no gaps)
311 MHz - 500 MHz (no gaps)

The Yaesu FT-50RD has MANY features. ï¿½For more information you can visit the Yaesu web site for the FT-50 at:

http://www.yaesu.com/amateur/ft50r.html

http://www.yaesu.com/amateur/ft50rtx.html

FEATURES:

ï¿½ FT-50R Super Wide Band Receive
ï¿½ Military Standard 810 Rating
ï¿½ Digital Code Squelch
ï¿½ 112 Memory Channel and 2 Home Memory channels
ï¿½ 12V DC Direct Input with car adapter
ï¿½ High Speed Scanning
ï¿½ Alphanumeric Display
ï¿½ CTCSS Encode AND Decode
ï¿½ Auto Range Transponder System (ARTS)
ï¿½ Direct FM
ï¿½ High Audio Output
ï¿½ Dual Watch

ï¿½ Digital Voice Recording System
ï¿½ Auto Power Off
ï¿½ Receive Battery Saver
ï¿½ Selectable Power Output
ï¿½ Transmit Battery Saver
ï¿½ Time Out Timer

THIS IS A PACKAGE DEAL THAT INCLUDES THE FOLLOWING:

* Yaesu FT-50RD Dual Band VHF / UHF HT Transceiver
* Owners Manual
* Yaesu NC-60B Charger
* Yaesu YHA-54 Dual Band Antenna
* TWO (2) MAHA MH-FNB-40H NiMH Battery Packs
* Premier SPM-102 Speaker Mic (new)
* TWO (2) Yaesu CSC-69 Carry Cases (1 new, 1 used)
* Yaesu CA-15 Drop in Charging Stand
* Yaesu FBA-15 Dry Cell AA Battery Case (new)
* Yaesu FT-50 "SERVICE" Manual (new)
* Yaesu RH-1 Rubber Case Protector (new)

I have the ORIGINAL factory boxes and packaging for ALL of the above. ï¿½ Everything is in MINT CONDITION. ï¿½Some of the accessories are actually NEW (never used). ï¿½SERIOUS buyers can e-mail me for photo(s). ï¿½Let me know if you can open a zip file containing several photos or if you prefer to view just one group photo of the FT-50RD with the accessories. ï¿½Payment accepted via PayPal or a money order. ï¿½Buyer pays shipping and insurance.

Price - $300 (not negotiable)

Thanks,
John

2926. Re: Speech Inversion Descrambling!

Newsgroup: rec.radio.scanner
Date: 2001-04-28 02:15:22 UTC
From: "Beep Beep!"
Message-ID: <_IpG6.4361$gv1.528104@paloalto-snr1.gtei.net>
Source record: 66365

I've got a vocoder here built into my soundcard and implemented on six SHARC DSP's that do the same thing.
The whole act of speech inversion is simply spectral inversion.
It's implemented by a series of bandpass filters covering between 100hz to 3khz.
Whenever a signal is strong at one of the bandpass frequencies, the bandpass strenght is reported as being weak instead.
REverse all these bandpass envelope values and what you have is spectral inversion.
Now do the opposite on the other end and you have spectral reinversion back to normal.
Not very complicated and to be honest, there are several audio programs out there that can do it, FYI, just in case
spectral inversion programs for communications interception is deemed illegal, you will still have a way of listening to it.
Even CoolEdit Pro can do it in realtime.

2927. BC780-XLT software?

Newsgroup: rec.radio.scanner
Date: 2001-04-28 02:52:34 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <SfqG6.57369$k04.11533520@news1.rdc1.mi.home.com>
Source record: 66366

I recall hearing there was some freeware/shareware software to program the Uniden BC780-XLT, is this true? If so, anyone have a link to it?

Thanks,
Bill Crocker

They were analyzing the Chinese radar capabilities. Did you ever stop
to wonder why the allies were able to whip Iraq with so few lost air-
craft? It was because using the same kind of analysis, we were able to
effectively jam Iraqi radar. We flew basically the same kinds of mis-
sions against them. Both covert and overt "observation" is carried out
by all nations, not just the USA. How come you don't get so upset over
the Russians flights over our borders during the Cold War, or the "fish-
ing" trawlers that lurked just outside our territorial waters during
space launches?

Any country that lets down its guard, neglects to know what its enemies
are doing, will regret it. As to "stupid", I don't seem to know the
name of Australia's space shuttles. G'day, mate.

And, in case you don't know it, the pilots of these EP-3s are told to fly straight and level and under NO circumstances allow a hostile aircraft to cause them to turn toward enemy territory where they can be forced to land OR shot down due to an "unjustified" intrusion. Certainly, this was not the intended result, but it *might* appear that the Chinese pilot was playing "chicken" in order to force them to deviate towards the mainland. Neither blinked resulting in the crash and the landing.

I leave BC245 plugged in and listen to it that way. Works fine for me. I believe the unit was designed to be used this way, or otherwise I would assume they would have made a bypass so that the scanner doesn't some on when the charging cord is plugged in...

Source record: 66372

Bill,
I have the 780xlt and the only freeware software I know of is the scanmaster software. The software provides a link between your scanner and your modem. When you dial up Unidens database, the software tells your modem to do it. Then the software allows your scanner to download the frequencies in your area to your scanner.
There is also a demo version of winscan, but that freeware version only allows you to program one bank only in your scanner? I hope this helps somewhat. If you have any questions e-mail me.

Thanks
Dave

Read the following..... it makes the Federal Government (namely the FCC)the sole authority on RADIO equipment.
State regulation of non-wired service was abolished by this act..... Hence a state or local law prohibiting any radio of ANY kind is illegal ..... just because a "local" government passes such a law doesn't mean that they have the authority to do so
It simplely means that no one has contested it in Federal Court.
A few years back Mich had a anti-radar detector law.... which was contested and the state had to ammend the law to include the wording " while in the commision of a crime " .... speeding or any other traffic violation of course being that crime. And it seems to me that Virginia's anti radar detector law was recently shot down (by a Deputy Sheriff of all things)

Your compairison of emmisions on a car is like comparing apples to oranges.... the state can make standards on emmisions higher than the federal governments but can not drop below the federal standard.

SEC. 1. For the purpose of regulating interstate and foreign commerce in communication by wire and radio so as to make available, so far as possible, to all the people of the United States a rapid, efficient, Nation-wide, and world-wide wire and radio communication service with adequate facilities at reasonable charges, for the purpose of the national defense, and for the purpose of securing a more effective execution of this policy by centralizing authority heretofore granted by law to several agencies and by granting additional authority with respect to interstate and foreign commerce in wire and radio communication, there is hereby created a commission to be known as the "Federal Communications Commission", which shall be constituted as hereinafter provided, and which shall execute and enforce the provisions of this Act.

I agree, suck and see though do it a stage at a time, connect one
antenna and monitor a few stations noting their signal strength then
add another twig and see if the original signals have degraded or not.
Really nothing to loose by not trying and everything to gain.

Last evening, Col. Steve of 3.260 Radio said that they would start using 6.900 during daylight hours soon, with a tenative schedule of 9:00 AM Eastern (US) time up thru to 9:00 PM eastern when a switchover to 3.260 would be made. Programming is expected to be (militia related) re-broadcasts of Genesis Networks or other patriot programming via tape/cart. Transmissions will be in USB.

This is the first genuine Clandestine station to fire up in the United States in quite a long time. Log it now while you can. No info heard as to QSL or verifications. Anyone have this info?

From: Cliff at the Shack <nomail@nomail.net>
Message-ID: <3aead50b_2@news.ghg.net>
Source record: 66381

Heard at the Shack on the Bayou 1420, April 28 UTC:

For the air show at Galveston Scholes Field, April 28-29, they've got a
tower frequency of 120.275.

The controller must normally work at Ellington Field, because he
accidentally IDed as "Ellington Tower".
As I write this, the tower radio has gone off the air, so the planes have
started using 120.275 like a unicom.
Things are actually kind of messed up.

One plane said the ground freq is 118.175.

Scholes doesn't usually have a tower. Unicom is 123.05.

I don't think plugging the AC adapter into it will bypass the battery pak on the Uniden 3000xlt. So, wouldn't doing this mess up the batteries prematurely?

I've also seen a few radios that would show the voltage raise from 11.5volts on a fully charged battery to about 16volts or more when plugged into the AC adapter. Altho they were designed to only be plugged in without batteries or for charging-only (not both at the same time), there were no 'safe-guards' to keep such from happening...
What I hate, tho, are the radios that shut themselves off when a charger's plugged in.. ;)

Indeed.

No 1 Antenna is good across the board.
Scanner Antennas tend to work well across a wide range but when it comes to a
Tuned Antenna you can't beat it.

No, you would probably need two, one vertical polorization one horizontal.
:-)

> Scanner Antennas tend to work well across a wide range but when it comes
to a
> Tuned Antenna you can't beat it.

In most cases that is true, but a good log periodic antenna can cover most
all you will listen to in one antenna. I use a KMA4113 log. It has 12 dBi
gain from 41 to 1300 Mhz. I do admit it's really a pain to use when I mount
it on my HT.

Logs aside you are absolutely right. A tuned antenna is the only way to go
if you have a favorite frequency that you care to monitor. The scanner
antenna plans on my site uses up to 6 tuned elements. It works okay on the
off frequencies but the difference is quite noticable near the 6 chosen
frequencies it is tuned for.

Bottom line, you can't have too many antennas just too little property to
put them on.

Glenn

I looked this up in my manual, just to make sure that I wasn't giving out bad advice. According to the manual for my 245, it says you can use the scanner while the batteries charge. However it also has a NOTE that says to disconnect the Adapter/Charger once charging is complete. Based upon this I would say that if the batteries are fully charged, then you might want to disconnect the plug for the battery pack (If so equipped, my 245 is), or remove it if you plan on using it strictly at home with the Adapter.

Unless of course the 3000 has separate power inputs, one for charge and one for power, then it wouldn't make a difference, but I doubt this to be the case..

Sorry for the misinformation in the prior post. Guess I'll be disconnecting the battery when I at home from now on...

Hi All,

Does anyone know of any radio control software for the Alinco DJ-X10
wideband receiver OTHER than RT systems?

I made the mistake of purchasing their s/w and I find it extremely limiting
(and even buggy).

Thanks!

Will

Somebody really needs to post the words to the Saturday Night Live sketch
about "It's a floor wax! No, it's a dessert topping! It's both!"

A cellphone is a telephone, by most reasonable definitions of telephone.
It's also a radio, by most reasonable definitions of a radio. So why
does it need to be one or the other, not both?

Dave

That's not radio by any reasonable definition. Radio uses radio waves
to transmit some sort of information (voice, data, video, whatever) over
a distance without wires. That doesn't include things that accidentally
radiate RF noise. It also (by most definitions) doesn't include things
that transmit power by wires. Nor is 60 Hz generally considered "RF",
since it's very difficult to transmit and receive *information* at that
frequency.

>of course we are talking semantics here and this is getting pathetic..cell

Why is FM at 100 MHz and 140 and 440 MHz radio, while FM at 825 MHz is not?

The FRS radio is tuned especially for the FRS band, whereas the scanner has
to be able to receive over a broad area of frequencies... this can cause a
bit of a tradeoff in reception.

>
>Paul L,
>Ireland.
In the "good old days", hams used to use a single feedline (coax or ladder)
and have several dipoles at the feed point. A popular design fromt he mid
1960s used flat TV antenna rotator cable. % pairs (If memeory serves me).
We would clip off, and peel the unwanted length and have 5 dipoles cut for
specific bands for a low VSWR.
But, for most recieve applications dipoles offer only the slightest advantage
over a random antenna. A friend introduced me to a heretical idea of using a
800MHz mobile trunking antenna for combined scanning and hamming.
The antennas overall lenth is 16". too short to be a true 1/4 wave at 146(us
2mtr band), but it has a loading coil in the middle that increases the
effective lentgh. It has a low (1.25:1) at 144, 1:1 at 440 and 1:1 in the
900MHz range. But this is for transmitting. For receiveing it works down to
the 49MHz cordless telephone band, covers the FM BCB, civil aircraft, public
service, what is left of the us 220MHz ham band, milair, and 70CM public
service business band. And does a fair job on VUF and UHF TV (wrong polarity
and no "gain" to reject multipath so ghosts are very noticable).
Go with a good vertical design and you should be better off then with a bunch
of seperate dipoles.
I suspect that if the dipoles where for harmonicaly related (ie 50 and 100)
thier might be some very odd intereaction. Dipoles will work at the design,
and every odd harmonic. Do wierd wthing at even harmonics. At higher freqs
(like 5 or 7 times) they can become very directional off the ends.

Ya... That would explain things if reception of all frs radios were of less quality on the scanner, but that's not the case.. Some came accross stronger on the scanner while others were stronger on the frs radio I was using.. They were sitting side-by-side and the other radios were all inside a carnival less than a mile away....

Every time you change frequency you change something in the circuitry of the radio(s). The radio(s) and the antenna it uses has peaks and valleys of impedance it has to deal with as do its internal tuned circuits every time you change to another frequency. Different radios means different peaks and valleys. Different radios and antennas means you now two variables playing into it. Make sense?

If you had both receivers side by side and the frequency was the same then
that might be the directional pattern of the antennas and the difference was
the FRS antenna being moved.

This is one of the things about Uniden H/H scanners that I wish they would change. The GRE-built scanners, such as the Pro-43 from Radio Shack, have two connectors, one marked CHG for charging the batteries and the other marked PWR for running the scanner on AC, bypassing the battery circuit. Running a Uniden H/H scanner on AC power continuously WILL shorten the life of the battery pack. And as has been observed, removing the battery and attempting to run the scanner on AC could expose the scanner to possibly damaging over-voltage as the wall warts are not regulated. Your only safe option is to run the scanner on batteries until they run down, plug the AC adapter in for the proper length of time to charge the battery, then disconnect the adapter and use the batteries again. Hmmm, just occurred to me, is this Uniden's subtle way of encouraging people to buy a separate base scanner?

I've just got that receiver and found its performance on VHF/UHF completely disappointing: with the built in telescopic whip FM rejection is extremely poor, images do appear everywhere, the attenuator doesn't help much since most stations are cut.

Anyone else confirms my (early) impressions?

Cheers from Pierluigi, Roma-Italy

the power cord will still charge a battery in the "cradle", but won't run
the scanner... I'm sure the problem is internal to the scanner

I have a beautiful Kenwood TK 805 D 16 channel UHF mobile radio for sale. This one is user / field programmable, no cables of software necessary, and will do the 400 amateur up into the 470 range. Includes a brand new microphone, and connecting cables. Excellent condition and fully functional.

$200.00 shipped to USA buyers only via USPS Priority Mail, insured, NO TRADES, NO C.O.D.

Will accept US Postal money order, or PAYPAL, BILLPOINT.

E-Mail if interested.

Dan

The men and women of the Los Angeles Fire Department would like to extend a personal invitation for you to join us at the:

LA Emergency Preparedness Fair -and- American Heroes Air Show
May 4, 5 & 6
10AM to 4PM
Dodger Stadium

ADMISSION AND PARKING ARE FREE!

For more info: http://www.lafd.org

The event will include....

- LA's Emergency Preparedness Fair - resources, information and products to help your family or business prepare for disaster.

- American Heroes Air Show - profiling aviation's role in law enforcement, fire service, national defense and emergency response with an all-helicopter display of aircraft.

- Recruiting Fair - Among the largest career fairs on the West Coast focusing
on law enforcement, public safety and the military service. Recruiters will be on hand to discuss career opportunities, entrance criteria and training curriculum.

- SAR Teams - Meet local Search & Rescue teams from around the region as they demo tactics and offer family safety tips for the wilderness, beach and urban jungles

- Rollin' to the Rescue Vintage Vehicle Show - on Saturday and Sunday will feature a display of vintage police, fire and emergency response vehicles.

- Firefighters' Style Muster - various teams of municipal employees will engage in friendly competition on Saturday and Sunday in an attempt to emulate the tactics, teamwork and equipment used by firefighters in the community.

We look forward to seeing you there!

For more information, please follow the links at: http://www.lafd.org

Yours in Safety and Service,

Brian Humphrey
Firefighter/Specialist
Public Information Officer

Los Angeles Fire Department

2996. Any info on a RS PRO 2014?

Newsgroup: rec.radio.scanner
Date: 2001-04-29 21:43:02 UTC
From: Frizz <kg4ivt@hotmail.spamsucks.goaway.leavemealone.com>
Message-ID: <9ci1i0$c2f$1@bob.news.rcn.net>
Source record: 66334

I bought this thing from a Radio Shack outlet center and it came without a manual. I stopped using it for a while and have forgotten how to program it. If I remember correctly, radio shack (or tandy) had a faxback doc. on their website somewhere. All I could find was just a features document and have not been able to find anything else. Anybody have an info on it? And, although I doubt there are any, anyone know of any mods for this radio? Thanks~!!

Thanks, James.
I have gone through a few of STEPHEN G. GULYAS's adapters (as pointed out on your web page), and I like them, but
the adapters are not robust enough enough for me. I use my radio with a telescopic whip every day.
I don't want to criticize his adapters, perhaps it is just the nature of the beast, or my constant use.

I want to update my web page with more frequency info for trunk tracking scanners. I have Bloomington Police, Mall of America, NSP and Northwest Airlines. I'm mainly looking for trunking type info but any info you'd like to provide will be appreciated.
So please, send me your info, links or what ever else you want to send. Credit will be given if you want it.
The address to my web page is http://members.tripod.com/kc0ewq/
Have a look around and leave your comments if you'd like.

3003. FS/trade: Bearcat BC-101 scanner

Newsgroup: rec.radio.scanner
Date: 2001-04-29 23:45:10 UTC
From: Don Bertone <dbertone@flash.net>
Message-ID: <aI1H6.3290$0U.709855339@newssvr16.news.prodigy.com>
Source record: 66342

This is the FIRST user programmable scanner ever made that allows you to program using the channel select switches as dip switches when in the program mode.

16 channels of blinking light glory in real good shape with original manual and software to compute the switch settings when programming.

This was the first true programmable scanner that only need to use it's own switches. There was another before this but it used pieces of metal that you broke bits off of and then inserted into the scanner. Sort of like the old IBM punchcard method. Once you used up the metal, that's it. Maybe back then it didn't matter but now you are in trouble. This scanner is truly programmable over and over.

$150 or a trade for something. I don't have anything in mind so make your deal.

From: BD <bodu@pobox.com>
Message-ID: <%82H6.528$BY.99212@nnrp3.sbc.net>
Source record: 66247

Hmm.. Is calling the police with info related to activity heard on the scanner encouaged?
I've heard that it's illegal to use the info, but they don't mean for ANY purpose, do they?...

Today, I heard one city mention that some youths, who were shooting paint-ball guns at cars, had slipped accross city-limits before their cops could catch 'em and then the neighboring town's police mentioning that they'd also gotten away from them in the nearby woods...
And then while "hiking" with my dog thru a construction area (perfect area for paint-ball, btw), I just happen to come accross the same kids (going by the description that was given), and nearly used my cell-phone to report 'em..... If only I'd had a # for the police (besides 911), I probably would have, but, anyway..... ;)

Actually if you become a member of the UnidenBC780XLT@yahoogroups.com
you will find a fantastic FREE program for use with the BC-780. Not only
that there are frequency files available for many areas of the USA. I will
tell you that this software which uses EXCEL for frequency sorting and
channel information input Has made programming My radio a breeze!! Look for
Andy's programm in the FILES section of the UnidenBC780XLT@yahoogroups.com
page in the yahoogroups area.

All you have to do is report suspicious people with paint ball guns and let the cops take it from there. If they want them they now know where to look. Don't ask don't tell just a concerned citizen.

I don't see where this would be a problem. It's not like you're divulging what you heard, to the bad guys! Besides, all the news stories pertaining to criminal activity, urge you to contact the police if you have ANY information. It is not illegal to monitor police calls, so what would be the problem?

Actually, this is one of the good aspects of monitoring. Most police depts. are more than willing to take information from citizens under these circumstances. PROVIDING you were not in the construction area looking for the juveniles, 'cause that will not go over well. However, if, in the course of your daily activities, you observe something that may relate to a crime you heard about on your scanner, by all means, call the police. BTW, you should memorize your PD's local number. Even if you are not in your local jurisdiction, they can relay to the police where you are located

3025. Re: Understanding Pro-94 Trunk modes... Help?

Newsgroup: rec.radio.scanner
Date: 2001-04-30 07:05:36 UTC
From: Jim MacDonald <jmacdon@mitre.org>
Message-ID: <3AED0EC0.D3CBF5C@mitre.org>
Source record: 66264

When you trunk scan the radio must have the corrisponding talk groups
entered into
the radio's SCAN LIST then you can scan the talk groups like scanning
with a conventional
scanner. In the SEARCH mode you scan ALL the talk groups on the system,
that are not
locked out. Try setting up a scan list in one of the trunking scan list
banks. You
should be able to SAVE teh talk groups while searching the trunk into a
scan list bank. Jim.

From: David Patterson <davidp@mindspring.com>
Message-ID: <3AED79D2.54F1@mindspring.com>
Source record: 66267

Here's another possibility:

Let's assume that most radios are not perfectly tuned to the exact transmit or receive frequency. What if your FRS radio is ever so slightly above the indicated freq, and the scanner is ever so slightly below the indicated freq.....then when someone at the carnival transmitted, AND THEIR RADIO was either slightly above or below the center frequency it would come out stronger on the receiver which was "off" in the same direction that the transmitter was.

Also, the scanner might have a wider bandwidth front end than the FRS, and therefore be more forgiving of an off-frequency signal.

David Patterson

3030. BC245 User Manual in Word or txt format?

Newsgroup: rec.radio.scanner
Date: 2001-04-30 16:15:26 UTC
From: "lirm35@bellsouth.net" <lirm35@bellsouth.net>
Message-ID: <5m3ret4t7l5p9ca0qkchp0gaeosh9b418f@4ax.com>
Source record: 66270

I'm looking for a copy of the BC245 user manual in MS Word or text file format.

Basically, I want a user manual to keep on my Palm. Although Adobe has a PDF converter for the Palm OS, it creates a file so large as to make this almost impractical.

Converting the PDF to a text file creates so many formatting errors it would be practically easier to retype the entire thing.

If anyone has done this or could point me in a direction to someone who has, I'd greatly appreciate it.

Thanks :)

3033. Re: 780xlt Prices

Newsgroup: rec.radio.scanner
Date: 2001-04-30 18:27:03 UTC
From: toomanyradios@aol.com
Message-ID: <20010430142703.10524.00001392@nso-md.aol.com>
Source record: 66272

Used 780s can already be found at rock-bottom prices, if you know where to look.

Over the weekend, I found a 780XLT in mint condition at a local pawn shop. Asking price was $149.99, and I got them down to $125.00. The shop probably loaned $100 or less on it, so they were all too happy to get their money back + a modest profit.

3034. FS: CTCSS Board for BC590/760XLT <+ Manual

While the News Groups provide an invaluable service by allowing scanners to talk to each other I find local information hard to get hold of.

I as you can see in my SIG have set up a regional group so I can get local information there and if I need wide range information I can come to the news groups.

The whole point of this post is to try and encourage more of you to set up local groups, its free, its easy and once set up that's it. I f you wish to then sit back and let the members run it so be it, it is so easy.

The regional groups around now are mine
http://www.groups.yahoo.com/group/North_West_Scanning_Group

And
http://groups.yahoo.com/group/scottish-scanning
http://groups.yahoo.com/group/SouthScanner
http://groups.yahoo.com/group/UKMidlandscanner

I would love to see every region with its own group, may be even every city and town.

I fear scanners that can not get local information will grow board of the hobby and that would be a step backwards for us all.

If any one wants more information or help setting up mail me at scanning@blueyonder.co.uk

THANKS FOR YOUR TIME
RICK

I could probably give it a try. Acquiring the pages via my scanner into MS Word. I don't know how well it will turn out. I'll give it try tonight, after I get home from work, and do a repost to let you know if it worked or not... If it does, it may take me a little while before it's ready, as that manual is quite large.

What's best is subjective. Best for what? Where? When? There are many
variables to consider when selecting an antenna. You mentioned a wideband
antenna. For the span of frequencies you're interested in you'd probably do
best with a discone or log-periodic, both of which are very wide-band antennas.
Problem with the discone is it has no gain. If you use a log-periodic design,
it's very directional and you'll spend all your time turning your antenna
toward the signal source. Distant reception is the benefit here, but only off
the front of the antenna. You might be better with several antennas Try a
discone.
BTW It's good to hear from the Emerald Isle. My wife has family in Sligo.
Welcome to the group.

You might look into an old design that hams used to use on HF called a fan dipole. I don't remember the specifics, but it had 5 or 6 wire elements fanning out more or less vertically from a common feedpoint. I think it was worked against a good radial system, but I'm not sure.
You can find the design in a old (1970's?) Radio Amateur's Handbook.
Might be worth a try. Let us know.

Take it to your local Radio Shack store. I sent mine back
for repairs a few years back. The original problem was
repaired, and the tech found a poor connection on the
antenna connector which he repaired. When the unit came
back, the performance was better than ever. There was no
charge because I had purchased their TSP (extended warranty)
when I bought the PRO-43.

Greetings,

I've got a Bearcat BC9000XLT Scanner with the keypad for a CTCSS operation, but not the board itself. I'm looking for one to install myself, used part is fine as long as it's functional.

I've got the board and switches from a 760XLT if you're interested in a trade. Pulled out in working order just before the sale of that scanner, thinking it would work in the 9000....DOH!

Please Email price and a picture if possible to WeBmedics@aol.com

Now I am not stating this as fact, but I would believe that if you are calling in with Bona Fide information that leads DIRECTLY and IMMEDIATELY to an arrest, bust or ticket issued, I don't think they would mind as much. Best route to take if you happen to witness something directly related to something heard on the scanner is to find a way of giving them the information without disclosing the fact that you heard it on the scanner..... What really turns the police departments crank is the people who constantly monitor scanners and call in frequently. Like I said, consider the usefulness of the information that you may have, in their shoes, not yours. In this case, better safe that sorry (or arrested or equipment confiscated.)

I have a Uniden Bearcat 210-XW Scanner
The problem is, that it takes a few minutes to warm up.
The display is very faint at first. After a minute or two
it seems to warm up, the display brightens, and everything works fine.
Any ideas on what to look for would be greatly appreciated.

Thanks
Bob...

>For SW use I need suggestions as I am not 100% sure, I do not want a 200'
>antenna draped all over the place. What is a good compromise?

I wish I had the option of draping a 200' wire all over the place!
I would suggest you consider what I've done. I salvaged the copper wire from a TV tube's yoke and I use a length of it as a random wire antenna.
It's strong enough so the wind won't break it, but small enough that you really can't see it, even if you know it's there. Birds occasionally fly into it, so I guess they can't see it either. Works quite well.

The state is not making any policy regarding the ownership or
technical performance of radio equipment. It's merely saying what can
and can not be operated while driving a car or truck in that state.

In any case, when you cite something, you need to indicate where it
comes from so others can find it too. I have no idea where you got
that quote and whether it's applicable to this situation or not.

IANAL, so what I say may not be accurate or relevant (though I do try
to keep up with certain parts of 14 CFR and 47 CFR).

See the following Link to the Online Radio Shack Manual for the Pro-32:

http://support.tandy.com/support_electronics/16622.htm

From the Page under operation:

Searching with your Pro-32

To search for transmissions, press [PGM], enter limits of frequency range,
and press [/\] or [\/] to activate "search".

Press [PGM].

Press [LIMIT].

Enter the lower limit of the frequency range to be searched.

Press [ENTER].

Press [LIMIT].

Enter the upper limit of the frequency range to be searched.

Press [ENTER].

Activate "search" by pressing [/\] or [\/]. [\/] starts from the highest
frequency and goes down.

[/\] moves in the opposite direction.

Press [SPEED] to accelerate or to slow down the search.

: Hope this helps.

I found this scanner Bearcat 142XL and tried to use it. I found frequencys for my area and coulnd't pick up a thing. Some one told me that it might be to old to pick up frequencys now in use. That the "chip" changes and I would need a new one. I figure this must be around 10 year old. Can anyone tell me , is it me or the radio?
DMalo@aol.com

3068. Digital Scanners

Newsgroup: rec.radio.scanner
Date: 2001-05-01 18:01:33 UTC
From: headshope@aol.comm.htspm
Message-ID: <20010501140133.14671.00001647@ng-mb1.aol.com>
Source record: 66207

When doing some Browsing at the FCC Site I came across the following cite:

The Act also contains provisions that affect the manufacture of equipment used for listening to or receiving radiotransmissions, such as "scanners." Section 302(d) of the Communications Act, 47 U.S.C. Section 302(d), prohibits the FCC from authorizing scanning equipment that is capable of receiving transmissions in the frequencies allocated to domestic cellular services, that is capable of readily being altered by the user to intercept cellular communications, or that may be equipped with decoders that convert digital transmissions to analog voice audio. In addition, such receivers may not be manufactured in the United States or imported for use in the United States after April 26, 1994. 47 CFR 15.121. FCC regulations also prohibit the sale or lease of scanning equipment not authorized by the FCC. 47CFR 2.803.

Note almost the bottom section that notes "or that may be equipped with decoders that convert digital transmissions to analog voice audio"

If anyone wants to see further on this:

http://www.fcc.gov/Bureaus/Common_Carrier/Factsheets/investigation.html

So it appears that we shall not be Scanning Digital anytime soon.

BTW: I think this somewhat answers the other Post regarding telling the Cops what he heard regarding those kids w/paintball guns.

forsale:

3 portable radios

regency lmrt 2500
I am not sure what frequency they are on.
they have dc powerjacks, a 16 button keypad on the front.
an alpha character display window.

these radios need: the plastic battery holders that fit inside
the back panel, and bnc antennas.

the display in the window shows the model number when they
power up.

I really don't know anymore about these, they are all
an 8/ 10 condition and all powerup.

I want to clean out the shack

30.00US for the batch, includes shipping and insurance.

(international postal checks from postoffice or certified checks only
please)

thanks

Not likely the radio....
We have an OLD BC210 that still kicks,
age is often not a factor in Scanners, save for looks and features.

Try the following sure fire Frequencies:
NOAA Wx:
1: 162.550 MHz
2: 162.400 MHz
3: 162.475 MHz

Not knowing where you are located program all three in and Scan.

These are used throughout the US for Weather Radio, verry strong signals that
most Scanners will get w/o the Antenna.

If you have no joy with those Frequencies then maybe the Unit is Dead.

For further Frequencies if it is still kicking try the Links Section at PB
Scanner:
http://www.expage.com/pbscanner2

Use 911Scanner, CityFreq and others.

Hope this helps.

3074. PRO-43 and 600-700 MHz

Newsgroup: rec.radio.scanner
Date: 2001-05-01 18:44:14 UTC
From: Ken Hamer <kenhamer@attglobal.net>
Message-ID: <3AEF03FE.9FA50E78@attglobal.net>
Source record: 66213

Several years ago I modified my PRO-43 to receive "continuous coverage" from 30-1000 MHZ, including the band between 512 and 806 MHz. The process involved entering some non-standard channel spacing frequencies within the factory specified ranges, then direct searching into the excluded bands.

Previously I had the excluded band limits programmed (511.9950, 806.0075) into memory locations, but recently I had to unlock the receiver using the CLEAR-0 power on, thus erasing all memories. The problem is that I performed the modification so long ago, I can't remember how to enter the non-standard channel spacing mode/frequencies anymore.

I seem to recall something about the KEYLOCK switch, but I may have entered the frequencies into memories, then reconnected the KEYLOCK switch for normal operations. I've done a thorough web search, but while I can find reference to the mod, I can't find the details.

I'd be grateful for any assistance, either direct of pointing me to the info. Thanks in advance for any assistance.

Ken Hamer

P.S. Has anyone any experience with receiving in the 600 MHz range? How is the sensitivity?

My ICOM dealer simply gives me a SMA to BNC adapter if I need one, free-of-charge. I buy my equipment from him, he has a glassful of them and considers that little lagniappe a good business practice. I agree. These are not expensive items.

Paul, KC2FNC

Indeed. Though most Readers/Users here frequent Ebay to Browse, only to see
that the Cell Able unit is now going for $XXX.00
because Non-regulars know nothing about them and only want to scan Cell.

Just my $0.02 worth.

Tony Malesic <blackflag@mindspring.com> and
headshope@aol.comm.htspm (PBScanner) both cited "an FCC Fact Sheet":
> Section 302(d) of the Communications Act, 47 U.S.C. Section 302(d),
> prohibits the FCC from authorizing scanning equipment .... that may
> be equipped with decoders that convert digital transmissions to analog
> voice audio.

The actual text of 47 USC 302(d)(1)(C) reads:
| ... being equiped with decoders that convert digital cellular transmissions
| to analog voice audio.

Please note the use of the word cellular.

Usenet is the electronic proof of both Gresham's and Sturgeon's Laws.

Well, I know it's been a couple days, sorry...

I tried every possible combination of things to do, but it just wouldn't turn out the way I wanted it to. Are you interested in an exact copy of the manual, page for page, or just the text in it or what?

The best I can do for an exact copy would be to scan the pages as image files. It won't allow me to scan the pages as text with images, to allow me to manipulate them like that... I could also scan it as a "Drawing" and up the resolution some. The image will then resemble a photo copy, and have a much smaller file size than that of a regular photo type scan, being I can scan it in Black and White. Each file size ends up quite small...

Otherwise, the other option is to just scan the text, and create an MS Word document that way... You won't have the benefits of the images and what not, but you will still have all the necessary information.

Let me know what you think, and how much of the manual you want copied, etc...
